PREFACE

The two monographs of the present volume bear on the history of English manorial institutions. Mr. Stenton has examined in detail the evidence as to the different types of manorial structure in the Counties of the Northern Danelaw—York, Derby, Nottingham, Leicester, Lincoln, and Rutland. Domesday book entries form, of course, his principal material, but he has also used for comparison charters of the Anglo-Danish period, as far as they were available, and has supplied some valuable observations based on his study of early twelfth-century documents.

His results enable us to form a more definite view of the contrasts of terminology, of institutional and of economic development between the region colonized by Danes and the South and West of England, which had arrived by the eleventh century to a much more complete and uniform arrangement of society on feudal lines. In this way the phenomena of the 'Growth of the Manor' are presented once more in a strong light.

Miss Neilson has tried to provide students of Mediaeval antiquities with a basis for classifying and comparing the various rents in kind and payments in money which were imposed on the population. It is only through systematic comparison that we are able to understand the meaning of many terms and the
incidence of the burdens indicated by them. The labour of taking stock of parallel illustrations and of studying the context in instances which for some reason have been described in a more or less explicit manner is a necessary complement to work based on the intensive study of some isolated groups of evidence. Miss Neilson approaches her task not from the point of view of the philologist, but from that of the student of records, and it can hardly be denied that research should be carried on from both sides in order to solve the many intricate problems arising out of the study of rents and services. Editors and students of cartularies, extents, and courtrolls will, I think, especially appreciate Miss Neilson's contribution. The variety of Mediaeval customs is almost inexhaustible, but it seems the more important to get hold of some guiding threads in the course of their investigation.

Paul Vinogradoff.

TYPES OF MANORIAL STRUCTURE IN THE NORTHERN DANELAW

I

The employment of the term Danelaw as a geographical expression varies considerably in regard to different subjects of historical inquiry. In the history of English law the term covers the whole of that portion of the country in which the specific legal customs resulting from the Scandinavian settlement of the ninth century prevailed; a district, if we may trust our texts, comprising the shires east of and including Yorkshire, Derbyshire, Leicestershire, Northamptonshire, and Buckinghamshire. In political history the term denotes the shires occupied by the various Scandinavian powers which arose in England during the same century—the kingdom of Guthrum, the heres of the Midlands, the Five Boroughs, the kingdom of York. But for the student of agrarian organization the term may profitably be used in a more restricted sense, a sense, moreover, for which there exists early authority, covering the modern counties of York, Lincoln, Nottingham, Derby, Leicester, and Rutland. Within this area, distinguished by local names of Scandinavian origin, by the occurrence, within its limits, of a form of local division, the wapentake, otherwise unknown, by its ancient assessment on lines distinct

1 See Liebermann, Leges Anglorum, 7.
2 This must be the force of Dena Lagu in Edw. and Guth. The extent of Guthrum's kingdom is uncertain; there is no reason for believing that it included the Five Boroughs.
3 Edw. Conf. 30. The passage in question presents some difficulty. See Chadwick, Studies on Anglo-Saxon Institutions, 199.
4 The evidence of local nomenclature proves an extensive displacement of native landholders at the time of the settlement of the ninth century. This displacement is most strongly marked in Lincolnshire and NE. Leicestershire, and is least obvious in Derbyshire.
from those which prevailed elsewhere in England, by the persistence of its political individuality until a late period, a reasonable uniformity of tenurial custom might be expected to prevail, and is in fact expressed with remarkable clearness in the terminology of the Domesday survey. In the following pages the term Danelaw, when used without qualification, will denote the shires enumerated above; with the reservation that the harrying of Yorkshire in 1069 makes it impossible to argue with security from 1086 to the conditions of the Confessor’s day, and that the special difficulties peculiar to the survey of Leicestershire to some extent throw the evidence relating to that county out of correspondence with the details recorded for the remainder of this district.

The scheme adopted by the compilers of Domesday in the description of the Danelaw shires recognizes a distinction between three several classes of tenement: the manor, the berewick, and the soke. If the boroughs are excluded from consideration, it is substantially correct to say that every parcel of land in this district is understood to form part of some manor; the berewick and the soke represent the two contrasted types of subsidiary local organization.¹ The questions which arise in connexion with the Domesday manerium must for the present be reserved; but of the soke and berewick we may say at once that if the derivation of these terms were an adequate clue to their meaning as employed in Domesday it would present little difficulty. The soke would then be merely a piece of land over whose inhabitants the lord of the chief manor enjoyed justiciary powers; the berewick would become the manorial grange or storehouse, the detached but appurtenant farmstead.² Even in 1086 we may find sokes and berewicks to which these simple definitions will apply; but there are also cases, especially as regards the berewick, when the terms have assumed a more special meaning. The latter commonly denotes an outlying member of a larger

¹ There is no example in the Danelaw of the employment of the neutral terra in contradistinction to manerium or soca.
² Berewick is only one of a series of words compounded with the OE. we, employed independently in Berkshire to signify a dairy farm.
estate, with holdings dependent in one way or another upon the head manor; and one aspect of the problem before us is the question of the relation borne by the men of the subsidiary tenements to the central estate and to its lord.

In the first folios of the Lincolnshire Domesday, and with somewhat greater frequency in that of Yorkshire, the term *inland* is occasionally employed in contrast to sokeland, and as equivalent to the more usual berewick.\(^1\) The use of the term under these conditions is noteworthy; for it is clearly quite distinct from any of the meanings which have been deduced for the *inland* of the counties south of Welland and Avon. It is evident that the inland of Lincolnshire and Yorkshire does not correspond to demesne in the normal sense of the word; we may easily find parcels of inland in this region upon which no demesne has been created.\(^2\) It is no less evident that in these counties inland was in no sense exempt from liability to the geld, for its capacity is invariably expressed in carucates or bovates ad geldum. It would seem, then, that the significance of the term lies in the contrast which it makes with sokeland, and we are driven to inquire in what that contrast consisted; an inquiry which may be pursued along two distinct lines, neither of which is free from complication. If we proceed by way of the comparison of formulas which seem from their context to be equivalent, it is necessary constantly to bear in mind the instability of the phraseology of Domesday; a warning peculiarly necessary from the fact that no duplicate entries in this portion of the survey serve to define the meaning of the northern *inland*.\(^3\) If information is sought from external sources, the small number of religious

\(^1\) Thus at Ouseburn, York (fo. 301 b), 'B and S. In Useburne v car. ad geldum. Terra ad v carucas. Inland et soca in Chenaresburg [Knaresborough].' So at Wispington, Lincoln (fo. 340 b), 'S and B. In Wispinctune ii car. terrae ad geldum. Terra ad iii carucas. Inland et soca in Stratone [Great Sturton] et Chercchebi [Kirkby-on-Bain]. Ibi (sunt) ix sochemanni et vi bordarii cum iii carucis.'

\(^2\) Caenby, Lincoln (fo. 344). 'In Covenebi, inland de Stou [Stow St. Mary] iii carucatae ad geldum. Terra ad iii carucas. Ibi xx sochemanni et xv bordarii habent v carucas. Ibi ecclesia et i molendinum iii solidorum, et xx acrae prati.'

\(^3\) The difficult Yorkshire case of Holne (fos. 299 b and 301) is discussed below.
houses existing within the Danelaw of the eleventh century implies a correspondingly small number of early documents which can be collated with the Domesday text. In the following pages it is intended to employ both these methods, but it is well to define their limitations at the start.

Among the cartularies which relate to the Danelaw, the most famous, and for our purpose the most important, is the Liber Niger of Peterborough Abbey.¹ This document, compiled between the years 1125 and 1128, during which Henry I had taken seisin of the temporalities of the house, was apparently drawn up by some clerk conversant with the formulas of the exchequer, who had derived, from whatever source, information respecting the ownership of certain of the monastic estates at a period as remote as the time of King Edward.² The record falls into two parts; an extent of the lands of the abbey in the counties of Northampton, Nottingham, Lincoln, and Huntingdon, followed by a section entitled 'Haec est descriptio terrarum Abbatiae de Burch in vicecomitatu Lincolniae'. The attention of students has in the main been concentrated upon the description of the manorial economy contained in the former section; but for our immediate purpose the brief details given in the Lincolnshire portion of the document are even more important. They are so important, in fact, that it becomes worth while to suggest the distinct possibility, indicated by some of the personal names which occur in the record, that the original of the Lincolnshire sections of the Liber Niger may be referred to a date some twenty-five years earlier than that at which the first portions of the document in question were compiled. We are told that the abbey possessed soke over half a carucate in Walcot near Alkborough, held by Earl Hugh of Chester, who died in

¹ Printed as an appendix (pp. 157–83) to the Chronicon Petroburgense, ed. Stapleton (Camden Soc.), 1849.
² E.g. p. 182 'Scotter, iii carucatas in dominio et i carucatam socage de terra Aschilli. Scotter, iii carucatas in dominio et i carucatam socage de terra Alnothi. Cleatham vii bovatas in dominio de terra Alnothi.' Aschill and 'Alnod' in 1066 were joint owners of Scotter, the latter alone possessed Cleatham. The evidence of Hugh Candidus shows that a record was still preserved at Peterborough in the twelfth century of benefactors to the house a hundred years earlier.
1101. Soke over two bovates in Scawby is assigned in the record to one Osbern, who may safely be identified with Osbern de Arcis, tenant-in-chief in 1086 of a portion of that vill, a baron who was certainly dead before the compilation of the Lindsey survey between 1115 and 1118.1 Another Domesday tenant-in-chief appearing in the Liber Niger, Godfrey de Cambray, who is credited with the possession of lands in Market Deeping, would appear from the Leicester Survey to have lost his estates by death or forfeiture before the year 1125.2 It is difficult to explain the occurrence in the record of such names as these otherwise than by supposing that they were transcribed by the compiler of the Liber Niger from a document dating from the very beginning of the twelfth century. This being so, we are at once brought to a date within fifteen years of that of the Domesday survey itself, and may fairly employ the formulas of the Liber Niger in explanation of the local conditions of 1086.

The whole scheme in accordance with which the entries in question are compiled turns on the distinction between desmesne and soke; it is assumed that all land must lie either in dominio or in socagio. ‘Hibaldestou: i carucatam in dominio et v bovatas socage. Malmetun: ii carucatas in dominio. Messingham: iii carucatas et dimidiam in dominio et ii carucatas socage’—such entries as these leave no room for any third form of tenement intermediate between the dominium and the socagium. The latter term is obviously equivalent to the terra de soca of Domesday; but it is only by a comparison of the relevant entries that we are enabled to prove that the dominium of the Liber Niger and the inland of 1086 are identical. The question is settled by the case of Reepham near Lincoln, where the Domesday ‘Inland huius manerii (sc. Fiskerton). In Refaim iii carucatae et vi bovatae ad geldum’3 is represented by the ‘Refham. iii carucatas et vi

1 Ed. Greenstreet, pl. ii, 22. His estate in Scawby was then held by William de Arcis.
2 V. C. H. Leicester, i. 353. His land in Sproxton had passed to an unknown person described as ‘Gilbert’s son’.
3 Folio 345 b.
bovatas in dominio' of the Liber Niger. Like the inland of Domesday, the dominium of the Liber Niger clearly includes land in the occupation of the men of the vill as well as the lord's home farm; and it would seem, therefore, that the compilers of the latter record, by dividing the tenements with which they dealt into demesne land and sokeland, wished to mark a distinction between land which was considered to be in the lord's possession and land from which he only received dues, suit, and service. It does not appear probable that the fourteen years between 1086 and 1100, the date to which we may approximately assign the Lincolnshire section of the Liber Niger, witnessed any material change in the organization of the Peterborough estates, and we may assume that the terminology of the later survey in this matter accurately reflects the distinction marked in the Lincolnshire Domesday between inland and sokeland.

This distinction between dominium, in the extended sense of the word, and soca is indeed to be found, though somewhat rarely, in the pages of the Lincolnshire Domesday itself. Of Earl Alan's manor of Brant Broughton, for example, which represented an 18-carucate vill, we are definitely told that Ralf the Staller, the earl's predecessor, had there possessed 13 carucates of land in dominio and 5 carucates of land de soca. This instance does not stand alone, and it is highly significant. It is clear that the 13 carucates in dominio were distributed over an area much more extensive than that of the lord's home farm; and the whole passage in which the phrase occurs shows

1 Chron. Petroburg. 182.
2 Fo. 347 b. 'M. In Burtune hundret habuit Radulfus Stalre xiii car. terrae ad geldum in dominio, et v car. terrae ad geldum de soca. Terra ad xviii carucas. Ibi habet Alanus comes in dominio iii carucas, et xxxvi villanos et ix bordarios, et xv sochmannos et alios ix bordarios habentes xv carucas. . . . De supradicta soca tenet Cadiou vi bovatas terrae, et habet ibi vi boves arantes.' Compare the Long Bennington entry (fo. 348). 'M. In Beninctun ii hundret habuit Radulfus Stalre xiii car. terrae ad geldum in dominio et vii car. et vi bov. terrae ad geldum de soca. Ibi habet Alanus comes in dominio v carucas, et xix villanos, et v bordarios, et xx sochmannos simul habentes xii carucas. . . . De hac terra tenet Herveus i car. et iii bov. et habet ibi i carucam.' It will be noted that while at Brant Broughton the sub-tenancy had arisen on the sokeland, at Long Bennington it had been created on the terra, the land apparently in dominio. The former tenancy may well have resulted from purchase.
that it is not connected with that distinction between the portions of an estate retained by the lord and those which were sub-let by him to tenants, which is frequently marked in this way in later documents. We may most readily understand the phrase if we take it as including both the dominal messuage of the lord and also the land in the occupation of villeins and bordars, in contrast to the land held within the manor by the sokemen who dwelt there. It must indeed be admitted that as to the exact nature of the rights which are implied by the word *dominium* here and in the Liber Niger we can say little with certainty. We must leave unanswered, for example, the question whether the lord could dispossess at will the men who dwelt within the sphere of his *dominium*. But the mere fact that already in 1086 the term in question could be employed so as to include the land of villeins and bordars as well as the manorial demesne raises wide issues.¹ Such a usage was fully established by the time of Bracton (circ. 1250); it is carefully defined by the author of the Dialogus de Scaccario (circ. 1175); it underlies, as we have seen, the arrangement of the Liber Niger of Peterborough (circ. 1100), but the fact of its employment in Domesday has to a certain extent been overlooked.² But the Brant Broughton formula, supported as it is by the terminology of the Liber Niger, suggests two propositions which certainly deserve to be tested in the light of the local information supplied by Domesday. The first is that the land of the local peasantry other than the soke-

¹ The incidental way in which this formula is introduced is clearly brought out in the description of Earl Alan's Lincolnshire fief. Thus, in the entry relating to the large manor of Fulbeck with Leadenham (fo. 347 b) the scribe had originally written 'In Fulebec et Ledeneham habuit Radulfus Stalre xxiii car. terrae ad geldum *in dominio*, et xv car. ad geldum de *soca,*' and then, apparently realizing that the twenty-four carucates represented the total assessment of the vill, deleted the words italicized, thus ignoring the distinction between *terra* and *soca* which he had previously marked. So too we were originally told that at Foston (fo. 348), a berewick of Long Bennington, there were 12 carucates *in dominio* and 7 *de soca*; but here also the words from *in dominio to soca* have been deleted. This case is important, for the Foston berewick included a population of forty-six sokemen, and the entry in its completed form makes no specific reference to the existence of any sokeland in the vill, a fact which bears very directly upon a considerable number of similar instances.

² As by Maitland, Domesday Book and Beyond, pp. 53-4.
men was regarded as the property of the lord; the second is that the rights which the lord possessed in respect of his soke-land bear a seignorial rather than a proprietary character. It will be our object in what follows to ascertain how far these propositions may reasonably be carried in the interpretation of the Danelaw survey.

It may be well, however, to note in the first place that the distinction which is here suggested is reflected in the terminology of later feudal law by the contrast between tenure in dominio and in servitio.¹ To hold a piece of land in dominio meant the power of dealing with it at will, of dealing, moreover, with such portions of it as were in the occupation of unfree cultivators.² To be seised in servitio merely covered the right to the receipt of profits from the land at issue—rent, it might be, or feudal service. It need hardly be said that this distinction is never explicitly made by the compilers of Domesday Book; the terminology relating to the various kinds of seisin was only worked out, and that slowly, in the course of the next century, but it was already latent in the contrast, always felt, though rarely definitely expressed, between dominium and soca.

In the second place, brief reference must be made to another distinction, rarely marked in texts which relate to the Danelaw, but of the highest importance in regard to the shires to the south and west—the familiar distinction between inland and warland. In such a text as the Burton Cartulary,³ which, it should be noted, includes extents of a small group of estates in south-west Derbyshire,⁴ warland bears the double implication of land in the occupation of the dependent peasantry and land rated to the king's geld, to the exclusion of the lords' inland. The inland of the Burton Cartulary clearly represents original demesne; and its employment in this sense is sharply contrasted with the Lincolnshire and Yorkshire usage which we are considering. And yet, after all,

¹ Pollock and Maitland, Hist. Eng. Law, i. 233.
² Dialogus, i. 11.
⁴ Mickleover and its berewicks, Willington, Winshill, Appleby.
the contrast is in part superficial, for the Lincolnshire usage only results from the final extension of a term susceptible, from its very nature, of diverse employment. One extension had already been made in the eleventh century; inland could then cover not merely the lord’s home farm, but also plots of land leased to cultivators out of the exempt demesne. It is further to be noted that warland was by no means the inevitable opposition to inland—utland and gesettland are thus employed. The use which might be made of the term inland in any given text might legitimately vary; exemption from the geld was only one among a number of characteristics which might be made the basis of distinction; and in the eastern Danelaw the existence of unusual numbers of free tenants was clearly the fact which led the compilers of Domesday to extend the term inland to cover the whole of that portion of an estate over which the lord had most immediate and direct control, the land of villeins and bordars in contrast to the land of the sokemen. The exceptional conditions of the Danelaw naturally produced a modification of the normal terminology.

With reference now to the Domesday text, it deserves note that the formulas employed in different folios of the Danelaw surveys with the object of marking the distinction between terra and soca vary considerably, and deserve comparison. The contrast is made in the simplest form by a pair of phrases which appear now and again in the opening folios of the Yorkshire survey, as in the following entry relating to Northallerton, (fo. 299) Alverton: ‘Huic manerio appendent xi berewitae. . . .

1 For the inland in general cf. Vinogradoff, Growth of the Manor, 225-7, 283-4; Round, Domesday Studies, i. 93 ff.
2 It is improbable that the Lincolnshire demesnes were exempt from the geld.
3 The deplorable condition of the printed text of the Cartulary makes it unsafe to place entire reliance upon its terminology, but there is one passage which suggests very strongly the employment of dominium in the Lincolnshire sense. ‘In Wilentona [Willington, Derby] nichil Inlandae est. Warlanda se defendit pro iii carucatis. In dominio sunt’ (p. 28). A population of 13 censarii was seated on this land. In 1086 Willington, which then belonged to Ralf son of Hubert, included no land in demesne, but contained a population of four villeins and two bordars. The cartulary entry reads as if the whole vill was reckoned to be in dominio, although no portion of it was exempt from geld nor yet organized as a home farm.
Ad hoc manerium pertinet soca harum terrarum.' The employment of these contrasted phrases makes it very clear that a lord's rights over his sokeland are rights of superiority, and not of ownership. The terms berewick and soke do not of themselves imply this distinction, but an unbroken series of formulas carry us from these neutral expressions to the in dominio phrase on which comment has just been made. On folio 337 b two successive entries run:— 'S et B. In Gunfordebi [Great Gonerby, Lincoln] sunt vii carucatae terrae ad geldum. Terra ad ix carucas. Tres carucatae sunt inland and iiiii soca in Grandham [Grantham].' 'S et B. In Herlavestune [Harlaxton, Lincoln] sunt xii carucatae terrae ad geldum. Terra ad xvi carucas. Novem sunt in soca et iiiii in aula Grandham.' These passages give us the series of equivalent phrases berewick—inland—in aula. A variant of the latter formula appears on folio 368 b: 'M. In Roscebi [Rauceby, Lincoln] habuit Turvert ix carucatas terrae ad geldum. . . . Ibidem v bov. terrae pertinentes ad aulam. Ibidem habuit Osmund iiiii carucatas terrae et i bovatae ad geldum. Terra tottidem carucis. Tres bovatae et dimidia pertinebat ad aulam eius. Reliqua erat soca eiusdem maneri.' Between this formula and the in dominio phrase a link is supplied by the description of the Archbishop of York's manor of Laneham, Nottinghamshire (fo. 283): 'In Laneham cum berewitis his . . . viiiii carucatae terrae et ii bovatae ad geldum. Terra xxvii carucis. In dominio aulae sunt x bovatae de hac terra. Reliqua est soca.' It is the value of this entry that it supplies us with the full formula of which the in dominio phrase is probably a condensation. Of the latter, two additional examples may be given: 'M. In Goldesby [Goulceby] habuit Colegrim iiiii bovatas terrae et terciam partem unius bovatae ad geldum in dominio et tantumdem terrae in soca. Terra ii carucis'(fo. 370). In this case the fiscal burden incumbent upon the vill has been divided equally between the demesne and the soke, but apart from this arrangement, the estate presents no remarkable features. It is otherwise with Robert de Veci's great manor of Caythorpe in Kesteven, the description of which deserves to be quoted in part (fo. 363): 'M. In Carltorp habuit Eilric xii carucatas terrae et ii bovatae in dominio et
xxviii carucatas terrae et vi bovatas de soca ad geldum. Terra totidem carucis, id est xlvi. Huic adiacent iii hundred¹ Fristun [Frieston], Normenton [Normanton], Wilgebi [Willoughby].’ The population of this large and compact estate, which extended over the whole of four 12-carucate vills, comprised 113 sokemen, 50 villeins, and 7 bordars; and the interest in its land was divided between Robert de Veci, the tenant-in-chief, with 3 ploughs in demesne; three unnamed men with $\frac{4}{4}$ teams; and one Englishman with 1 team. The description of this complex group of tenements in a single entry suggests the handiwork of a hurried scribe, who would not afford the time necessary if the several parcels of inland and sokeland contained within the estate were to be recorded according to their local distribution among the constituent vills of the manor, and considered that he had done his duty when he had indicated the amount of land which fell respectively within the scope of the dominium and the soke. The Domesday scribes, as the collection of formulas which has just been given will show, were far from consistent in their choice of terms with which to denote these conceptions; but through it all they are clearly trying to maintain the distinction between the land, the soil of which was vested in the lord, and the land of which the ownership remained with the representatives of the old English free peasantry of the vill.

Here, then, at last, it would seem that we have arrived at a clue to the real meaning of the recurring distinction marked in the Danelaw survey between the berewick and the soke. We have seen that the terms inland and berewick might in a given context be treated as equivalent, and that the inland of 1086 may fairly be interpreted, as in the Liber Niger of Peterborough, as land in dominio. This being the case, there results at once a provisional definition of the Domesday berewick. In its relation to the manorial system, the berewick will simply become a detached portion of inland, a holding geographically separate from the chief manor of which it formed part, but owned, as to its soil, by the manorial lord. Conversely, it would seem that we must understand by soke-

¹ The 'hundreds' in question were clearly vills of 12 carucates each.
land, land regarded as belonging to the men seated upon it, but carrying a liability to services and dues to be rendered at the manorial centre to which it was appendant. In this distinction lies the real significance of the contrast between the two familiar types of subsidiary tenement, which it may be well to consider in some detail.

It will at once be evident that if we are to maintain this conception of the Danelaw berwick, the ownership of its soil must never be assigned by our text to any man other than the lord of the chief manor. So far as it is possible to speak definitely in regard to a point involving a consideration of so many details this essential condition is satisfied. It is, no doubt, true that the jurors of the West Riding of Yorkshire were in doubt whether Swegn's pre-Conquest manor of Attercliffe with Sheffield had not at some undefined period been inland of Earl Waltheof's manor of Hallam; but we cannot at this distance of time undertake to decide a question which they were compelled to leave open. So, too, when we are told that at Notton near Pontefract, where of six carucates of land two were reckoned inland and four soke of 'Tateshall', Godric had nevertheless possessed a hall, we must see rather an instance of a pre-Conquest manor which has lost its autonomy than any confusion between the rights of Godric and those of the lord of Tateshall. The one passage in the surveys of the midland counties which seems to present a definite obstacle to the theory occurs in the Domesday of Northamptonshire, and may be discussed in this place, for Northamptonshire, of all counties, presents features of tenurial organization the most closely related to those which obtained north of Welland. In 1086 the Count of Mortain possessed an estate in Croughton, freely owned in King Edward's time by one Leofnoth, which, we are told, was formerly a berwick of the adjacent manor of

1 Fo. 320: 'M. In Ateclive et Escafeld Suuen habuit v car. terrae ad geldum... Haec terra dicitur fuisse inland in Hallun.'
2 Fo. 317: 'M. In Notone sunt vi car. terrae ad geldum... De hac terra sunt iii carucatae in soca de Tateshalla, et ii carucatae inland. Ibi tamen habuit Godric aulam.' 'Tateshalla' is represented by the modern Pontefract.
3 V. C. H. Northants, i. 326.
Evenley. Evenley is duly entered as the next manor upon the count’s fief; but it is stated that Leofstan had held the manor freely T. R. E., and we are thus faced with the difficulty of explaining how, if Leofstan held the soil of Croughton as a berewick of Evenley, the former vill could appear at the same time in the free possession of another man. Fortunately, the existence of a second Evenley entry in a later folio of the survey enables us to avoid this question, by showing that a Leofnoth, who may safely be identified with the Leofnoth of Croughton, had possessed in 1066 a separate manor in Evenley to which the Croughton berewick had clearly been appurtenant, although by 1086 it had passed to the Count of Mortain, Leofstan’s successor, instead of to Walter the Fleming, who took title from Leofnoth.1 No instance presenting a difficulty of this kind occurs in the Clamores of either Yorkshire or Lincolnshire; and our conception of the relations between manor and berewick clearly need not be affected by the case of Croughton. It is the interest of the latter that it shows an exception of somewhat formidable character brought into conformity with other entries by a consideration of the local relations of the property involved.2

It is a more difficult question whether, in addition to inland and sokeland, the Danelaw surveys reveal the existence in this district of a third form of tenement, the thegnland. The general sense of the latter term is well ascertained;3 it denotes the holding of a thegn, land defended by military service; from which results its frequent employment to cover those portions of the estates of a noble or religious house which had been sublet to persons capable of discharging the military

1 V. C. H. Northants, i. 341 a. Croughton and Evenley are situated in the extreme south of Northamptonshire, in the hundred of Kings Sutton.
2 A somewhat similar difficulty arising in regard to Claxby, near Normanby, Lincoln, is resolved in the same way. On folio 361 b an entry runs: 'M. In Clachesbi habuit Chetel ii bovatas terrae et Goduin i bovatam terrae inland ad geldum.' The unpleasant necessity of regarding Godwine’s inland as dependent on Chetel’s manor is removed by another Claxby entry on fo. 359, which shows Godwine himself in possession of a manor of 10 bovates in that vill and in Normanby adjacent to it.
3 See the discussion of the relations of thegnland and sokeland by Round, Feudal England, 28-35.
obligations which lay upon the fief. Of this term there are only two examples in the Danelaw surveys:—

These entries would probably be held conclusive were it not that on folio 301 a duplicate entry is made of the second estate, which raises serious doubts:—

In Holne Dunstan ii car. ad geldum. Terra ad i carucaham. Hanc terram alii dicunt inland, alii socam in Wachefeld.

It is clear that a scribal error has been made in one of these entries, and the question is raised whether we should not read ‘inland’ instead of ‘tainland’ in the first. If we wish to prefer the more difficult reading, we should note that a scribe, familiar with the term inland as employed in the southern counties, would naturally question the propriety of its use in such a context as the entries transcribed above. The contrast between thegnland and soke, on the other hand, would be familiar to him, and he may well have modified the formula before him in accordance with what he believed to be the true reading of the original return.1 Apart from this consideration, it certainly seems more probable that the contrast between soke and inland, of which more than a score of instances occur in succeeding folios of the survey, should be intended than that we should be confronted with a distinction between soke and thegnland, never marked elsewhere in this part of England.2

1 If the original ran, as suggested by the duplicate entry, ‘alii dicunt inland,’ the change would be facilitated by confusion between the final t of ‘dicunt’ and the initial t of ‘tainland’.

2 For the thegnland see Feudal England, 28–9; English Society in the Eleventh Century, 370–2. Essentially, thegnland is a portion of an estate granted out to secure the performance of military service by the grantee, and inalienable without the consent of his lord. In Cambridgeshire it is this last characteristic which mainly distinguishes thegnland from sokeland, but in the Danelaw surveys these tenurial distinctions are commonly ignored, and it is not probable that sporadic reference should be made to them in a couple of isolated entries. Tainlande on fo. 287 b is the estate of a king’s thegn.
If to this it is added that in the south and east thegnland is rarely, if ever, entered as above with explicit reference to a manorial centre other than the vill within which it lay, the probability that a pair of scribal errors are responsible for these sporadic references to a Danelaw thegnland will distinctly be increased. The question cannot wholly be settled on the existing evidence, but it may at least be recognized that these isolated appearances of the formulas in question should be regarded with grave suspicion.

The simplest form assumed by a group of sokeland tenements consists of a vill, or definite portion of a vill, regarded as appurtenant to some manor, but inhabited exclusively by sokemen. This kind of holding presents no difficulty, though it admits of infinite variety of local detail; and examples may be derived from each of the Danelaw counties. But, although we may perhaps regard these examples as representing the normal type of sokeland, it is more commonly the case that sokemen are found settled on sokeland in company with members of other social classes—villeins or bordars. This is so, even in Lincolnshire, where the sokemen outnumber the combined villeins and bordars; it becomes increasingly the case as we pass across the Danelaw from east to west, and in both Nottinghamshire and Derbyshire it is easy to find parcels of sokeland upon which, to all appearance, no sokeman dwelt. If we are to maintain our definition in face of these facts we must, it would seem, assume the existence of one or other of three conditions:—

1. A depression of the peasantry. The villeins on sokeland were originally sokemen or the descendants of sokemen, who had become implicated in a more embarrassing nexus of service since the Conquest, but had not ceased to own the land on which they were settled. In this connexion, it is very important to remember that the Domesday Survey tells us nothing as to the composition of the rural population of the Danelaw in King Edward's day. In those counties in regard to which we possess the necessary information we can trace a tendency towards a relative depression of the higher
social classes; and we may infer that a corresponding movement in this direction has taken place here, although its progress is concealed from us. It may be added that Yorkshire and Derbyshire, certainly, and Leicestershire in all probability, had undergone devastation at some period between 1066 and 1086.

2. The villani on sokeland, while maintaining their pre-Conquest condition, are referred to a social class lower than that of the recognized sokemen because they are inferior to the latter in wealth, or because they are burdened with heavier customary services. It is to be noted that while the local distribution of sokeland tenements, as they are entered in Domesday, had been fixed before the Conquest, the social divisions with which we meet in the Survey represent in the main the work of Norman lawyers, and turn much more upon diversities of economic condition than upon strictly legal distinctions between class and class. The problem would, indeed, be greatly simplified if we might identify the sokemen of the east with the class of six hynd men described in certain Anglo-Norman texts as intermediate between the ceorls with a 200 shilling wergild and the thegn with one of 1,200 shillings. This, however, we may not do, for the existence of a separate class of six hynd men as late as the date of Domesday is itself very doubtful, and our knowledge of the wealth and local position of the sokemen is sufficient to show their general affinity to the great body of the two-hynd ceorls.

1 The most detailed evidence comes from Essex, in which county the bordarii exhibit a notable increase at the expense of the villani and the slaves. See Maitland, Dom. Bk. and Beyond, 363; Round in V. C. H. Essex, i. 359-63.
2 In general, on the Peterborough estates, the sokeman is exempt from week-work.
3 Cf. Vinogradoff, Growth of the Manor, 341.
4 In the Leges Henrici Primi, 76, § 2, we are told that the wergild of some freemen is 200 (shillings); of others, 600; of others, 1,200. Elsewhere, the compiler states that in Wessex wers are of two sorts: two hundred and twelve hundred, applying respectively to villani and thegns. The compiler is evidently contrasting the custom of Wessex with the 'law' of the Mercians and the Danes. It would seem, then, that the sier hynd man of the twelfth century must be sought north of Thames; we may perhaps find him in the radknight of the west. The fact that the Leges Edwardi Conf. assign the same manbote of 12 orae to the villein and sokeman of the Danelaw is against a differentiation of their wers.
It is more probable that large numbers of the villani of Domesday have been the victims of an arbitrary classification; that without the agency of any of the forces which made for depression, some slight relative economic inferiority has sufficed to relegate to the villein class many a man who nevertheless continued to own the land which he cultivated, whose status in strict law was identical with that of his more favoured neighbours who secured recognition as socmanni. Such a man would inevitably be attracted towards the lower of the two social orders between which he fell, and there would be an end of him.

3. The men of inferior rank may have held their tenements under the sokemen. The influence of dependent tenure in this connexion has to some extent been neglected, but in the surveys of the Danelaw counties there arise at least four clear cases in point. At Long Eaton (Derbyshire) (fo. 273) we are told that 22 sokemen and 10 bordars sub ipsis had 9 carucates of land, and the entry relating to Gilbert de Gand’s Lincolnshire manor of Baumber (fo. 354 b) includes the passage ‘Ibi habet Gilbertus et carucas vt xxii villanos et vi bordarios et xx socmannos et xvi bordarios corum’. It is significant that the lower stage in both these groups should be composed of bordars; for where the population of the same piece of sokeland is drawn from two social orders, the members of the second, in a large majority of instances, will be bordarii. But the entry relating to the Yorkshire manor of ‘Bochetone’ (fo. 314 b) shows us villeins as well as bordars dependent upon sokemen—‘In hac villa est soca de xii carucatis et vi bovatis ad geldum. Ibi sunt nunc vii socemanni habentes xii villanos et vii bordarios cum ix carucis’—and the accuracy of the text is confirmed by the record of a similar tenurial arrangement in a Lincolnshire vill (fo. 345 b)—‘Soca eius manerii (sc. Scotton in Lindsey) In Torp. [Northorpe] i carucata terrae ad geldum. Terra ad i carucam et dimidiam. Ibi iiiii socmanni habent ii villanos et i bordarium cum i caruca.’ Explicit statements of this kind are rare; in most cases where sokemen, villeins, and bordars occur together no clue to their mutual relationship is supplied by Domesday, but there is nothing in the
record to contradict the possible dependence of the bordars, or even of the villeins, upon the sokemen in an indefinite number of such instances. It has been remarked¹ that the coexistence upon the same estate of large and small holdings, such as those respectively of sokemen and bordars, is a natural result of an agrarian system such as that which obtained in the Danelaw. Even without the agency of seigniorial pressure, the growth of population called forth a system of small tenancies, subordinate, perhaps, to the larger shares held by the sokemen, but like them anterior in point of origin to any manorial organization; and it seems highly probable that the frequent appearance in our record of bordarii seated upon sokeland may find at least a partial explanation in forces of this kind.

In supplement to these possible cases we should certainly note that, as has been remarked, Domesday will occasionally tell us of the combination of inland and sokeland within the limits of the same subsidiary holding. We certainly cannot trust the terminology of the Survey so far as to assume that it has consistently differentiated inland from sokeland in all cases of the kind. On many estates the land must already by 1086 have acquired parcels of inland which are not distinguished by Domesday from the adjacent sokeland.² Scribal error, indifference to the minute details of local organization, and the possibility of confusion in the replies originally

² The existence of demesne teams upon discrete parcels of sokeland is very significant in this connexion, and the figures relating to the soke of Bolingbroke are peculiarly suggestive. This soke contained seventeen members; and in eleven cases the teams possessed by the men of the respective vills are equal both to the carucates of assessment and to the recorded teamlands. On the other hand, in four out of these eleven entries there appears a demesne team in excess of the estimated number: Halton Holgate, 9 C - 9 Tl - 9 + 1 T; Sibsey, 6 C - 6 Tl - 6 + 1 T; East Keal, 4½ C - 4½ Tl - 4½ + 1 T; East Kirkby with Revesby, 12 C - 12 Tl - 12 + 1 T (fos. 351-351b). In these cases it is clear that the demesne teams are superimposed upon an existing agrarian organization, framed without reference to them, nor is this affected by the fact that the odd demesne team at East Keal seems to descend from a pre-Conquest manerium incorporated in the soke.
given by the jurors, must all fully be allowed for in this connexion.

The exact nature of the ties which united manor and sokeland in 1086 must have varied indefinitely between different individual cases, but a rough classification of them will be in place here:—

1. By derivation, the essential feature of sokeland consists in its subjection to the justiciary power of its lord; and we may fairly infer that suit of court was demanded from most sokemen already in 1086. It is a more difficult question how far beyond the Conquest these judicial powers may reasonably be carried, and what considerations of rank or wealth entitled a man to claim them. The earliest quotation for the employment of the term soke in a geographical sense to denote a group of vills is probably to be obtained from the will of Wulfric Spot, 1002, in which we read of 'Mortun [Morton, Derby] and cal seo socna ðe ðærtu hærcð and ðæt land ðiderinn æt Wyllesleage and Oggodestun [Ogston] and Winnefeld [Wingfield] and Snodeswic into Mortune'.¹ But Wulfric Spot was a powerful and wealthy thegn, and we may not lightly argue from him to his less important fellows of equal rank. There is evidence, as we shall see, which shows us groups of vills united by common subordination to jurisdictional powers exercised at a central estate as early as the middle of the tenth century; and it would seem certain that juridical dependence was a determining factor in the original differentiation of sokeland from other free tenements; our difficulty is that in King Edward's time much sokeland was appurtenant

¹ Earle, Land Charters, 220. Kemble, 1280. The Wyllesleage of this document is, I learn from Mr. W. H. Stevenson, a printer's error for Pylelleage, and relates to Nether Pilsley, two miles from Morton. In 1066 this vill (D. B. Pinneslei) was itself the caput of a manor, but belonged to the same owner, Swegn 'cild', as Morton and Ogston, and possessed 2 bovates of sokeland in North Wingfield. The only Willesley in the county is situated in the extreme south (D. B. Wyllesleie), and is clearly a compound of the OE. personal name Wifel. 'Snodeswic' has not been identified, it appears in Domesday as an independent manerium under the form 'Esnotrewic', and probably lay somewhere near South Normanton. Morton is some two miles from Ogston and four from (South) Wingfield. The estate had evidently been re-organized between 1002 and 1066.
to manors held by men of small consequence, men whom it is not easy to endow with the right to hold a seignioral court. But in regard to this matter it is necessary to remember not only that we are in virtually complete ignorance as to the social position occupied by the smaller thegns of King Edward's day, but also that we can trace all the more extensive groups of sokeland in the Danelaw back into the possession of men to whom extended franchises are known to have belonged. The famous entry at the beginning of the description of Nottinghamshire, which gives us the names of those who had formerly possessed 'sake and soke, toll and team and the king's custom of the two pennies' over their lands in this county and in Derbyshire is highly significant, but it does not entitle us to assert that no one in this district can have held a court save those magnates whose names are included in the list which follows. When in the Nottinghamshire vill of Clarborough we see an Englishman of 1066 holding with sake and soke a single manor, rated at half a bovate, and valued at sixteen pence,¹ we must admit that very humble people might exercise justiciary powers, whatever their nature or extent may have been.

2. If it is probable that as a rule manor and soke formed a jurisdictional unit, it is certain that in numberless cases they formed an agrarian unit, cemented by the labour services which were rendered by the men of the dependent holding. This agrarian bond must have been at its weakest in the case of large and scattered sokes, and at its strongest where the sokeland was contiguous to the manorial centre. It so happens that we possess a contemporary definition of the services demanded in 1086 from a parcel of sokeland of the latter kind, which has hardly yet received the attention that it deserves. In 1086 the Nottinghamshire vill of Blyth was entered in Domesday as sokeland of the adjacent manor of Hodsock, and as inhabited by four villeins and four bordars (fo. 285). In 1088

¹ Ibidem habuit Ulchil dimidiam bovatam terrae ad geldum cum saca et soca. Terra ii bobus. Idem ipse Ulchil tenet de Rogero (de Busli) et habet ibi ii bordarios cum ii bobus, et i acra prati...T. R. E. et modo valet xvi denarios¹ (fo. 287). The occurrence of the full formula 'sake and soke' places its jurisdictional force beyond doubt.
Roger de Busli, the lord of Blyth, founded a priory of Cluniac monks there; and in his foundation charter he was careful to define in general terms the nature of the services which the men of that vill had rendered to him, and were to render to the monks, his successors. If the text of the charter may be trusted, which there is no reason to doubt, the men of Blyth were accustomed to plough, do carrying service, reap, mow, make hay, pay merchet, and keep up the dam of the local mill-pool. This instance should not be pressed unduly, for we can hardly suppose that the sokemen of unmanorialized Lincolnshire were normally subjected to the severe burdens which lay upon the villeins and bordars of Blyth; but it undoubtedly shows that the services which united manor and sokeland were capable of extension so as to include participation on the part of the inhabitants of the latter in all the various kinds of agricultural work which centred upon the manorial demesne.

But the charter has a further value from its bearing upon the general status of the Danelaw peasantry. It is somewhat surprising, for example, to find, barely more than twenty years after the Conquest, and in a remote part of a Danelaw shire, the distinctively servile payment of merchet occurring under the Norman name, but evidently regarded as an accepted custom. One is tempted to suggest a depression of the peasantry; but in view of the later records which show us even sokemen sub-

1 Our knowledge of this charter, a copy of which is given below, is derived from two independent sources, a cartulary once in the possession of William Sanderson of Blyth, now apparently lost, and the Harleian MS. 3759. The two copies vary in some important respects; the version in Dugdale’s Monasticon begins with the invocation ‘In nomine sanctae et individuae Trinitatis’, and omits the witnesses, but both texts contain the clause describing the services of the men of Blyth. In the absence of the original it is, no doubt, possible to regard the clause in question as a late gloss; but its occurrence in two distinct copies of the instrument makes this supposition highly improbable. The authenticity of the document as a whole is fully established by the names of the witnesses recorded in the Harleian copy (see V.C. H. Notts., i. 225); and so few baronial charters of the eleventh century have been preserved in an original form that we are certainly not entitled to regard the statement of services as a suspicious feature. The employment of the West-Frankish invocation formula is paralleled in the almost contemporary Tutbury foundation charter; and the insertion of a year date is also found in the original Monk’s Kirby charter of 1077.
jected to this exaction, it is very doubtful whether this simple explanation would really be true. The Norman merchet has affinities with the Old English *legerwite*, no less than with the Celtic *amoby*; its appearance at Blyth in 1088 merely reinforces the probability, which might be argued on other grounds, that some such payment was already made by free men to the thegns of King Edward’s day.  

Apart from the merchet, there is really little in this brief custumal to which a parallel cannot be found in the services of the Peterborough sokemen, forty years later. Carrying service, and the specific field-work here indicated, were incumbent in the twelfth century on sokeman and villein alike; and even if the men of Blyth were subject to a demand for week-work, improbable, perhaps, but left open by our text, they were no worse off in this respect than the Lincolnshire sokemen of Scotter in 1125.  

Heavy as these services may seem, there is nothing to suggest that they are in any sense the innovations of a Norman lord; and we need not hesitate to believe that the little community of humble men at Blyth had substantially maintained the condition that was their lot in the days of King Edward under Wulfsgige, then lord of Hodsock and its sokeland.  

The Blyth foundation charter is contemporaneous with the Domesday text, but it gives no information as to the amount of the services, of which it indicates the general character. Some exceptionally early evidence relating to this matter, perhaps also, next to the Blyth document, the very earliest extant statement of services due from peasants to a lay lord, arises out of the case of the men of Revesby (co. Lincoln), a vill which in 1086 formed part of the great soke of Bolingbroke. At Revesby, in or about 1142, William de Roumara, Earl of Lincoln, successor to Ivo Taillebois, the Domesday lord of Bolingbroke, established a house of Cistercian monks. His

---

1 For the payment of *merchet* by free men see Vinogradoff, Villeinage in England, 154-6, 202-4; Maitland, Northumbrian Tenures, E. H. R. v. 629, &c.  
2 Chron. Petroburg. 164: ‘Et ibi sunt xxix sochemanni, et operantur i die in ebdomada per totum annum, et in Augusto ii diebus.’ Elsewhere on the Peterborough estates the sokemen appear to be exempt from weekwork.
foundation charter is very instructive, for he tells us that as the land at issue was not in proprio dominio he felt it necessary to compensate the immediate holders. Exchanges of land were accordingly made with three knightly tenants, and with the priest of Thoresby, a neighbouring vill, now lost, and the succeeding portion of the text runs thus:—

Rusticis autem in Scitthesbia (also lost) et Thoresbia et Revesbia manentibus omnibus terram accipere volentibus dedi escambium ad placitum eorum; quibusdam eorum libertatem cum omnibus suis et manendi ubi vellent absque calumnia. Magis eligentibus et petentibus, sicut eligerunt et petierunt et benigne voluerunt, liberos cum domibus et omnibus bonis suis dimisi.

Haec sunt nomina eorum qui remanentes terram de me acceperunt.

De Revesbia.

(1) Alffernus recepit in escambium duas bovatas in Cherchebia [East Kirkby] per servicium viii solidorum per annum et nihil amplius, et primo anno quietas.

(2*) Normanus recepit in escambium unam bovatam in Hagnebia [Hagnaby] per servicium duorum solidorum per annum et operationem unius diei in hebdomada et primo anno quietam.

(3) Edricus recepit unum toftum in Hagnebia et duas acras terrae per servicium viii solidorum per annum, et operationem viii dierum in Augusto et primo anno quietam.

(4*) Godric recepit in escambium unam bovatam in Sticcenaria [Stickney] per servicium duorum solidorum per annum, et unum escheppa bracei ordei contra nativitatem Domini, et operationes iii dierum in hebdomada in Augusto, et aliis hebdomadis per annum operationem duorum dierum, et primo anno quietam.

(5*) Ricardus de Revesbia recepit unam bovetam in Sticcefordia [Stickford] per idem servicium per annum excepto quod escheppa bracei quam debet dare erit de avena.

1 Mon. Ang. v. 434. Dugdale derived this charter from an original in the possession of Sir Henry Spelman, now apparently lost.

2 For the (e)scheppa bracei compare Chron. Petroburg, 160 [Easton, Northants.]: 'Et isti (sc. xxi villani) debent facere lxiii sceppas de brasio de blado domini.' Clearly, each villein had to produce three 'sceppae'. The term skep is still used to signify a large basket in the NE. Midlands.
(6) Paie Blancherd recepit unum toftum per serviciun sex denariorum per annum et nihil amplius, et primo anno quietum.

Unfortunately for our purpose, the greater part of the peasantry chose to take advantage of their lord's licence to depart; and the document ends with a list of their names: a unique enumeration of the population of a Danelaw vill at the middle of the twelfth century.\(^1\) But on the existing evidence, although all the men of Revesby appear indifferently as *adscripti glebae*—they cannot leave their land without the sanction of their lord—we can trace clearly enough two classes of peasant distinguished from each other by the question of week-work; and in the light of the conditions which prevailed on the Peterborough estates at this time, we may fairly identify the men whose service consisted only of rent and boon-days with the representatives of the sokemen of 1086. It may be of some significance that already at the latter date a portion of demesne had been created on the soke of East Kirkby and Revesby, which, to all appearance, had not existed there before the Conquest;\(^2\) a fact which would certainly tend to increase the stringency of the labour services exacted from the local peasantry. To this should be added the probability that the services required for the future from the men who agreed to an exchange of land were lighter than those which had previously been demanded from them while in possession of their original tenements.\(^3\) It is a complicated situation with which we have to deal; much had happened at Revesby between King Edward's death and the migration of 1142; it remains true that the circumstances of the latter event serve to throw a faint light upon a matter in general utterly obscure—the local economy of the Danelaw villages under the Anglo-Norman kings. And although in such a case as this there is always

---

\(^1\) The personal names in the list are too corrupt to be worth reproduction here. They illustrate, however, the adoption of Norman personal names by the native peasantry.

\(^2\) *In Cherchebi et Resvesbi xii car. terrae ad geldum. Terra xii carucis. Ibi liiii sochmanni et xiii villani habent xii carucas. Ibi habet Ivo (Taillebois) i carucam et ii ecclesias et clxxx acras prati*’ (fo. 351 b).

\(^3\) This is the case in regard to the tenants of knightly rank.
a temptation to read more into our texts than is really implied in them, we should note the possibility that the mere fact of an exchange being offered to the expropriated peasants may be due to the lord’s recognition that even their small tenements, situated as they were upon ancient sokeland, lay outside his proprium dominium.

At a later time the juridical and agricultural aspects of the manor are intimately connected through the communal presentation of offences against the agricultural practice of the township in the manorial court. By-laws were made within its precincts, and their observance was secured by its sanction. No detail of agricultural life was too insignificant to become the subject of presentment by the jurors of the court leet—the keeping of unringed swine, trespass with oxen in the harvest field, the neglect to scour ditches, breach of the common pinfold, fences out of repair, are visited with amercements imposed by the same authority which punishes assault and the breach of the assizes of bread and ale. But before we may argue from later practice to the eleventh century, there remain two important questions to be answered; the questions whether the court of a discrete manor took cognizance of the agricultural routine of its constituent members, and whether the whole procedure by presentment was not an innovation due to the enterprise of Henry II or of the lawyers of his court.1 As to the presentment of criminals before the sheriff in his tourn, this last point would seem to have been finally demonstrated; but it is not so clear whether, under this aspect, Henry’s work was not the employment for purposes of government of a procedure already operating within the sphere of the manor. We cannot for a moment doubt the earlier existence of some machinery for securing general compliance with the traditional agricultural practice; and it is hard to see how an offending rustic could have been brought under the control of the village community without a general agreement that his misdeeds might be brought by any person interested before the notice of the township as a whole. The creation of manorial courts must

1 Select Pleas in Manorial Courts (Selden Soc.), Introduction, P. and M. i. 589.
have regulated procedure, and made the decisions of the community more effective; and we may reasonably be confident that the regulation of agricultural routine formed a part, none the less vital because its details are unknown, of the work done by the courts which had arisen by the date of Domesday.

As regards the first question, we are thrown back entirely upon the recorded practice of later times. In the seventeenth century the court of a manor may well exercise jurisdiction in regard to the agrarian life of hamlets whose inhabitants do suit and service there, and if the interval is vast between the time of King Charles and the time of King William, we shall at least do well to remember the intense conservatism of English rural life. The very inconvenience of the arrangement is itself a good argument that the arrangement is no innovation. We should not expect the internal economy of the individual vills incorporated in the wide sokes of Lincolnshire to be regulated by the central court of the soke; and yet, in Elizabeth's time, the soke of Grantham issues general by-laws evidently binding upon all its members. Practice in this respect no doubt varied between different manors; but it would at least be agreed that the performance of labour service was a proper subject for the justice of the lord in his court, and from this to the reception of complaints respecting breaches of agricultural order in the several vills of the soke is an easy step. And we shall probably be justified in concluding that the court of the head manor was in innumerable cases the means through which the whole agrarian organization of the soke was regulated and maintained.

3. It is very probable that in addition to their association with the agricultural routine of the chief manor the inhabitants of sokeland were accustomed upon occasion to assist the manorial population in the performance of the military service demanded from the estate by the king. The passages in the Danelaw Domesday which bear directly upon this point are few but suggestive:

1 To these passages the following may be added for the sake of comparison: 'Radulf Pagenel clamat socam et socam (sic) super terram Aluric quam Wido de Credun habet in Osbernebi [Osbornby, Lincoln]. Dicit wapentac quia iste Radulfus debet habere de hac terra unum equum

Now it may be admitted that none of these entries relate to normal examples of sokeland. The two latter examples are clearly connected with the arrangements frequently made between tenants in parage by which one co-parcener defended the whole estate as against the king and received assistance from his fellows to this end. The first case is more difficult, for the ‘Adelid’ of the Domesday entry seems to represent the OE. female personal name Aethelgyth. The manor to which this lady’s estate in Somerby had been annexed in 1066—Keisby, six miles to the south-east—had been held by a thegn named ‘Offram’ at the latter date, and the nature of his relations with Aethelgyth is obscure. But the main fact, that among the rights implied in the possession of soke could be included the power of exacting military service from those who held under the soke, is clear, and it is enough for our present purpose. The traces, in later records, of the performance of military service by sokemen are few, but they are definite, and the entries given above reinforce the antecedent probability that the freemen of King Edward’s time were

in expeditione quando vadit’ (fo. 373 b). Ralf’s predecessor was Marleshagen, Sheriff of Lincoln, and it may well be that the claim in question was founded on rights which the latter had exercised in his official capacity when calling out the fyrd. He certainly possessed no land in or near Osbournby.

1 In a rental of Staunton, Notts., temp. Henry VI, there is mention of tenants bound by customary service to ride with their lord to Scotland. The marginal entry Haec est consuetudo shows that this custom does not result from any feoffment within memory, and it may well be a survival of the military duties of the local peasantry.
bound, if need arose, to take the field at the bidding of their lord. In 1125 the twelve sokemen of Great Easton in Leicestershire were expected to do such service as was incumbent on them of right with the knights of Peterborough; we may be sure that a similar burden lay upon the nine sokemen who dwelt within the vill in 1086,¹ and that their predecessors, seated there under Earl Ralf of Hereford, were expected upon occasion to follow him to war. The sokeman’s tenure in 1086 had not the unmilitary characteristics which distinguished the socage of the thirteenth century.

The terminology of Old English law placed beside the inwara, which represented the service of dependants to their lord, an utwara to be rendered to the king²; and the survival of these terms in the Danelaw to a period much later than is commonly supposed may have some bearing upon the present question. Between 1100 and 1200 the texts printed in Dugdale’s Monasticon furnish grants of land ‘ad utware’ relating to eight distinct vills in Yorkshire, Lincolnshire, and Nottinghamshire³; and the term in question is found repeated in confirmations of title in a manner implying that the condition of service which it involved continued to be a matter of practical importance. The inwara is much rarer; it is contrasted with the utwara in the foundation charter of Worksop Priory,⁴ of which the original has recently been printed, and

² For the utwara cf. Vinogradoff, Growth of the Manor, 239, 284; English Society in the Eleventh Century, 193-4.
³ See Athenæum, June 24, 1905, and July 13, 1907, for Nottinghamshire and Yorkshire examples of the Utwara in twelfth century charters, and for a Nottinghamshire reference to the Inwara. The authenticity of the latter is proved by its appearance in the contemporary foundation charter of Worksop Priory. To these may be added the following Lincolnshire instances:—Mon. Ang. vii. 865 (Foundation Charter of Newsham Abbey, circ. 1140) ‘sexsta parte de ecclesia de Brochelesbi [Brocklesby] et una bovata ad utwar....Ecclesiæ quoque de Haburch [Habrough] cum bovata terrae ad utwar.’ So also Mon. Ang. vi. 327 (Confirmation Charter of Richard I to Thornton Abbey): ‘Ex dono Herberti de Sancto quintino vi bovatæs terrae ad upware (sic) in Stainton.... Ex dono Radulfo de Alt ii bovatæs terræ ad dimidiam Utware et sextam partem molendini in Brunna [Burnham in Areholme]... de abbacia beatae Mariae Eborem in Brunn [Burnham] et Thorn dimidiam carucatam terræ cum pertinencis ad Utware.’
⁴ Mon. Ang. vi. 118.
it occurs in an isolated passage in the Liber Niger of Peterborough. There is no need to insist on the military implications of the utwara, the *forinse servicium* of Bracton; but the term also connoted burdens very distinct from service in war. There is good reason to suppose that it implied responsibility for the geld, in contrast to the *inwara*, covering land reserved for the exclusive profit of the lord. Such at least is the conclusion suggested by the employment of the latter term in the Liber Niger, where the phrase 'In Estone sunt iii hidae ad in waram' at the beginning of the entry relating to Easton in Northamptonshire is contrasted with the note 'Hacc villa adquietat se erga regem pro dimidia hida' in a way which suggests the traditional balance of *inwara* and utwara.¹ That we read nothing of the utwara in the Danelaw surveys may be explained by the fact that the Domesday commissioners were incurious about the local apportionment of forensic service when the title to land was not affected thereby; it is no objection to the belief that in 1086 the lord's ancient duty of compelling his men to seek the fyrd was still one of the forces which made for the subordination of scattered freeholders to the control of a central *manerium*.

4. But of much greater importance in this respect, because of universal extension, are the financial relations which united manor and soke; relations expressed in the various payments in money or in kind which were being derived by the lords of the eleventh century from their men seated on appurtenant sokeland. That the compilers of Domesday recognized the financial unity of manor and soke is proved by a fact which seriously hinders the investigation of the local statistics of the Danelaw, the fact that in all but a few exceptional cases the value or render of the soke is incorporated in the value assigned to the chief manor of which it formed part. It is obvious that in the actual working of the manorial economy the revenues of the soke must have been kept distinct from the proceeds of the central manor; in the twelfth century a baron could endow a grantee with a portion of the exits of

a soke, just as the king could charge the farm of a borough with an annual payment to any given individual; but it is unusual for the distinction to be marked in Domesday. Now in so far as this fact merely implies that the Domesday scribes, working against time, wished to spare their labour, it is of no particular interest; but an examination of the values assigned for King Edward's time to those manors which were the centres of the widest sokes suggests a more significant reason. A few of these pre-Conquest values may be set out here. In Nottinghamshire, Dunham produced £30 and six sestars of honey, Orston £30 by tale, Newark £50, Southwell was worth £40. In Derbyshire, Repton was worth £15 to the king, Mickleover £25 to the abbey of Burton. In Lincolnshire, Folkingham was estimated at £50; Greetham at £40; Caythorpe, Caistor, Drayton, Bolingbroke at £30; Ruskington at £25; Waltham le Wold, Doddington, Sleaford, Horncastle at £20; Gayton le Wold, Westborough at £15; Edenham at £10. In Yorkshire, Wakefield was worth £60; Howden, Aldborough, Driffield, and Warter were worth £40 each; Wilton was worth £20; Otley £10. Figures of this type, it is clear, do not result from the addition of a number of casual payments, nor shall we readily believe that they represent chance estimates of manorial value on the part of the local jurors. Manors of the type of Drayton, Greetham, Folkingham, drawing revenue from vills a score of miles away, stand in a different category from the ordinary rural estate,

2 There is a remarkable contrast between these figures and those assigned to the royal sokes of Rothley and Great Bowden, Leicestershire. The value of Rothley in 1086 represented £3 2s. from the central manor and £31 8s. 1d. from its members; at Great Bowden the demesne of the vill brought in 40 shillings yearly, the men of the vill rendered 40 shillings, the soke, £7 11s. 6d. It is clear that these manors, unlike the rest of the royal demesne of Leicestershire, had not been farmed; but the fact that the values given here obviously represent actual renders made to the lord suggests very strongly that the same is true of the neater valets and valuats of Lincolnshire.
3 The entry which gives the value of Grantham, Lincoln, is especially suggestive. 'T. R. E. tota Grantham fuit soca ad lii libras, modo reddit c libras ad pondum. Ecclesia fuit tunc ad viii libras, modo est ad x libras, sed non valet nisi c solidos' (fo. 337 b). The Northamptonshire evidence points in the same direction.
of which the value, a matter of plough-teams, woods, meadows, and mills, lay fairly enough within the knowledge of the local peasant. These figures are unintelligible unless we regard them as farms, the sums for which the bailiff of each manor was required to render account to his lord; exactly parallel to the payments which the men of the midland boroughs were making at this time to their lord, the king. And in estimating the forces which at the time of the Survey were holding together the sokemen of the Danelaw in the manorial groups with which that record makes us familiar, the fact of their joint contributions to the common farm of the estate to which they belonged should fairly be assigned high importance. 1

As, then, the nature of the values recorded for the greater manors of the Danelaw raises issues of some significance, it may be well to examine some of the figures which do not of themselves suggest the existence of any system in the background. In Nottinghamshire, for example, Clifton in Rushcliffe wapentake is valued T. R. E. at £16; Bothamsall and Sutton-with-Scrooby at £8; Arnold at £4. In Derbyshire, Scropton, Eggington, Ilkeston, Weston-on-Trent, and Sawley stand at £8. Markeaton, Morton, and Nether Pilsley at £4. In Lincolnshire, Nettleham and Kirton Lindsey were valued at £24; Stow and Barrow-on-Humber at £32; Claxby and Well at £8; Kirkby Laythorpe at £4; Waddington at £96. In Yorkshire, Loftus and Acklom stand for £48 each; Bridlington, Clayton, Easingwold, Ripon for £32; Laughton en le Morthen for £24; Kippash for £16. Now the unit of £8, to which it is evident that these figures may be referred, was familiar enough to the men of the Danelaw in the eleventh century. It was the sum paid as relief to the king by the Nottinghamshire thegn who possessed more than six manors; it denoted the fine laid upon the local hundreds for certain specified breaches of the king’s peace. Its appearance in such associations as these no doubt results from the fact that it included just 120, a round hundred, of those orae

1 The regulations in the Leges Henrici Primi for the settlement of disputes between a lord and his firmarius prove a common practice of farming estates.
of sixteen pence, current generally in England in the eleventh century. The existence of this eight-pound unit as a basis for computations of manorial value clearly accounts in part for the frequent occurrence, in Yorkshire, of extensive estates estimated at the curious sum of £56 each.\textsuperscript{1} The recurrence of this value in relation to estates diverse both in their agricultural capacity and in their assessment to the geld shows at once that an arbitrary estimate has been made in each case; a fact more consistent with the conception of the ‘valuit’ as a \textit{firma} pre-determined by the lord than with the assumption that it represents an approximate calculation of potential revenue on the part of the local jurors. In any case, the values based upon the unit of eight pounds clearly fall into line with the normal decimal estimates which have been quoted above as evidence of the conventional character of the pre-Conquest values assigned to the greater manors of the Danelaw.

As to the origin of the payments rendered by sokemen to their lord, little can be said with any confidence. When at last, in such a document as the Rothley custumal,\textsuperscript{2} we obtain detailed information as to the internal economy of an extensive soke, the render received by the lord in respect of the several tenements appears in a form indistinguishable from rent in the modern sense of the word.\textsuperscript{3} At Rothley there is a marked tendency for tenements of equal size to render to the lord an equal sum of money,\textsuperscript{4} a tendency which would not be likely to prevail if the payments in question merely represented the traditional dues exacted in ancient times from the free men of

\textsuperscript{1} Thus, on the estate of Drogo de Beurre in Holderness, Hornsea, Kilnsea, Mapleton, Withernsea, Burstwick are severally valued at this sum (see Maitland, Dom. Bk. and Beyond, 473). In every case except the last Earl Morcar is returned as the pre-Conquest owner, and Burstwick is assigned to Earl Tostig, Morcar’s predecessor in the Northumbrian earldom. Morcar’s manor of Pickering was valued at £88; Whitby, which belonged to Earl Siward, at £112. The lands of Tostig and Morcar at ‘Walesgrif’ and Pocklington were likewise valued at £56 each, as also was Edwin’s manor of Gilling.\textsuperscript{2} Archaeologia, xlvi. 89–130.

\textsuperscript{3} Compare Burton Cartulary, 29: ‘Item Ricardus filius Godefredi habet similiter de terra sochemannorum v bovatas et dim.; iii scilicet et dim. pro xd et dim. sicut sochemannus, et duas quietas sicut Racchenstus.’

\textsuperscript{4} This sum, with local variations, approximates to a rent of 2s. 2d. for the bovate, which would give a value of 13 \textit{orae} to the carucate. Very frequently, however, the rents cover a toft in the village in addition to the arable holding.
the soke. On the other hand, if any general remark can in safety be made about these scattered estates of which Rothley is a type, it is that the right of the sokeman to his tenement is independent of, and older than, the manorial organization to which, when we discover him, he is found annexed. And not only is this the case, but, as will appear hereafter, there is no real reason why the original dependence of the sokeman upon his lord should have resulted, in the first place, from the act of either party to the relationship. The action of the Old English kings in granting soke over freemen to thegns, earls, or religious houses undoubtedly played a part, as important as it is obscure, in creating the discrete manors of the Danelaw. And yet, in the relationship thus created, it may well be that payment or services were involved, which, under the different circumstances arising in the eleventh century, might harden into conditions of tenure resembling a modern rent. If the free man, in the days of his independence had, according to custom, contributed money or provisions to the _feorm_ of king or earl, we may be sure that this burden was not remitted by the new lord; we may infer a local regulation of its incidence similar to that which obtained in the case of the geld, and from this point onwards we may accept the desire to co-ordinate the render made by each man with the extent of his holding in the open fields as sufficient to produce the general conformity between render and tenement visible in the thirteenth century. In regard to all this matter, we are arguing in the dark; but if we are to maintain the original freedom of the normal sokeman it becomes necessary to assume that some process of the kind indicated here lies behind the facts of his condition as they appear when we first obtain knowledge of them.

Among the financial burdens incumbent on sokeland, a prominent place is taken by those payments which are commonly comprised under the generic name of _consuetudines_. This term, which occurs less frequently in the surveys of the Danelaw shires than in those of the counties to the south and east, is sufficiently vague to cover different payments of very diverse natures; while at the same time it points unmistak-
ably to the fact that the exactions which it covers are being levied as a matter of customary practice.\(^1\) That in some cases the consuetudines covered the whole value of the soke to its lord is made probable by the description of the Nottinghamshire soke of Oswaldbeck (fo. 281 b); for in two successive entries the ‘hi sochmanni reddebant xx solidos de consuetudine’ of the first evidently gives the information supplied by the ‘haec soca valet x solidos’ of the second. But the origin of these payments remains obscure, and indeed it is probable that their incidence was determined by no consistent principle.\(^2\) At times it is clear that the sokeman’s payments to his lord represent a commutation of rents in money or in kind; and it is to be noted that actual food-rents must surely have still been exacted in some of those cases where sokeland was dependent upon a manor which included no demesne, and of which the lord held no land in other villas. Then, too, full allowance must be made for payments in respect of suit to the manorial mill,\(^3\) or in connexion with that fold-soke of

\(^1\) Among the payments of diverse origin which have gone to produce the consuetudines rendered by the inhabitants of sokeland an important place should be assigned to the gafol, the gabilum of early texts. Gafol was certainly paid to the king in pre-Conquest times by men who were not seated upon the king’s own land (English Society, 210-11).

\(^2\) The Burton Cartulary (page 29) shows that at Winshill (Derbyshire) the lord received the sokeman’s heriot, amounting on that manor to 16 shillings (= 12 orae). No doubt similar payments were exacted elsewhere.

\(^3\) Little is said in the Danelaw surveys about mill-soke, and that little is confusing. One thing is clear, that it was possible for the soke of a mill to be reserved to some one other than the lord of the manor in which it lay. The case of the mills of Barkston is definite on this point. In 1086 a portion of Barkston formed a berewick of the neighbouring vill of Belton, and contained two mills ‘unde iacet soca in Grantham’ (fo. 370 b). The greater part of Barkston was itself sokeland of Grantham, and there also were two mills ‘which Thurferth the son of Wulfred had—their soke in Grantham’ (fo. 338). This must in some obscure way be connected with an enigmatical entry in the Kesteven Clamores to the effect that ‘Robert de Stafford and Colswegen likewise claim two mills which are in Barkston. The wapentake says that they lie in Marston, and their soke in Grantham’ (fo. 377 b). Neither Robert nor Colswegen held land in Barkston, but the former possessed a manor in Rauceby, eight miles to the N.E., formerly the property of one Thurferth, probably Thurferth the son of Wulfred. The reference to Marston remains inexplicable. If the analogy of ‘fold-soke’ is worth anything, mill-soke should imply the lord’s power of compelling his men to grind their corn at the manorial mill. It is therefore somewhat strange to find the soke of a mill reserved to a person other than the lord of the manor in which it was locally situated; but this was clearly a possible thing. We may conjecture that in such cases the soke
which we read so much in the East Anglian survey.\(^1\) Probably, also, not a little of what was rendered by the sokeman of the eleventh century was given by way of an acknowledgement of the lord's superiority over his sokeland; a payment which, it may be noted, a Norman baron would find both convenient and easy to confound with the arbitrary tallages which he was beginning to exact. But even after we have enumerated the more obvious sources of the revenue derived from this quarter, there will still remain a residue to which no occasion can readily be assigned, and of which the origin probably lies far back in the unwritten history of the Danelaw vills.

In the previous passage a casual reference has been made to the possibility that food-rents may originally have formed one element in the scheme of payments and services which united the sokeman to his lord. Traces of rents in kind are discernable at a later date than Domesday\(^2\) in the Danelaw; but we read little of this form of render in our texts, and the probability is strong that in most cases food-rents had already been commuted into money payments by the time of the Conquest. A fortunate chance has, nevertheless, preserved a copy or translation of a document coming from the reign of Æthelred II in which the constituent parts of an annual feorm are set out with clearness and accuracy.\(^3\) In this text a landowner bearing the name of Ærnketel, a name arguing Scandinavian descent or relationship, and his wife Wulfrun tell King Æthelred that they have granted to Ramsey abbey their land of 'Hikelinge et ... Kinildetun' cum firma et servitio sicut habitur in dominio nostro. The lands which formed the subject of the grant cannot with accuracy be identified in Domesday, but they certainly lay in the adjacent vills of

---

\(^1\) Compare the sixteen shillings 'de consuetudinibus pascuarum quae sunt in Scapewic et Cherchebi' which the men of Navenby, Lincoln, retained by force (fo. 376 b).

\(^2\) As in the Revesby case quoted above, p. 25.

\(^3\) C. D. 971.
Hickling and Kinoulton under the wolds of South Nottinghamshire.¹ The document is drawn up in a somewhat unusual form; but as Ramsey Abbey possessed no land in this neighbourhood in 1086, and claimed no estate there at any subsequent date, the deed, even if a forgery, must have been compiled before the close of King William's reign, and the details which it contains may fairly be cited in evidence of eleventh-century conditions. Of these details the most important is a statement of the *firma* which was yearly to be rendered to the abbey from the vill of Hickling. Each year, on St. Benet's Day, Wulfrun directs that the abbey should receive 'x mittas de brasio, et v de grut, et x mittas farinae triticae, et viii pernas, et xvi caseos, et duas vaccas pingues ... in capite vero quadragesimae viii isicios'. This represents a substantial rent, but it was no onerous burden for the men of a prosperous Danelaw vill,² and there was little room for the interference of the bailiffs of thegn or abbot in the matter of its incidence or collection. No doubt, in process of time, the store-house of an absent lord might develop into a hall with adjacent demesne, and labour upon the latter might be substituted, at first, perhaps, in times of scarcity, for the yearly gift of hams and cheeses; but it is at least evident that this development has not yet occurred in the one Danelaw vill of which something of the internal economy, in the period before the Conquest, is known to us.³ Nor need we hesitate to argue from the *feorm* of Hickling to the rents paid in

¹ The authenticity of the grant is supported by a passage in the Ramsey Cartulary (Rolls Series, iii. 167), which tells us that Ærnketel and Wulfrun, parents of Æthelwine, fourth Abbot of Ramsey, were buried there in 1019. This is clearly derived from independent tradition, and the passage adds that 'terram de Hikkeling et de Kuldeiton' were given by these persons to the abbey. The editor identifies 'Kuldeoton' with Kilvington, Notts.; Kemble identifies the 'Hikeling' of C. D. 971 with Hickling, Norfolk. But the local proximity of Hickling and Kinoulton is conclusive, and the latter name may well descend from an OE. *Cynchilde tun*, to which the *Kinildetune* of the text is an approximation.

² In Domesday, part of Hickling was a berewick of Cropwell Bishop, held T. R. E. by St. Mary of Southwell; two carucates there were sokeland of Granby; and an estate of 3½ carucates was held as two manors by Turchil and Godwine. It is most probable that this last property represents the land of C. D. 971, but this cannot be considered certain.

³ Hickling affords a fair field for the processes of manorialization described by Maitland, Dom. Bk. and Beyond, 319–20.
King Edward's day by the men of other manors of whose burdens we must perforce be content to remain in ignorance.

Between the discrete manors of the Danelaw and those of which we read in the survey of such a county as Cambridgeshire there exists a superficial resemblance which is no doubt sufficiently striking. In both districts the lord of the chief manor appears as drawing revenue from, and as exercising jurisdiction over, free men settled at a distance from the manorial centre. In either case, the divergence from the type of manor represented in the compact estates of the south is remarkable and definite; but there remains a noteworthy distinction between the form of manorial structure revealed in the Cambridgeshire survey and that which tended to prevail in Lincolnshire. Considered with reference to our texts, this distinction may be expressed in the statement that while in Cambridgeshire the economy of the discrete manor is created by the varying relations of groups of free men to their respective lords, in Lincolnshire it arises from the administrative dependence of scattered tenements upon the manorial centre. In part, no doubt, it may be true that these different conceptions represent very similar types of local organization; it is certainly the case that the formulas in which they find expression in the survey are far from identical. Those formulas, so common in the rest of England, which tell us whether this man or that held his land freely, whether he could dispose of it without his lord's licence,¹ will rarely be found in the surveys of the Danelaw shires other than Leicestershire, and in Leicestershire the distinction of tenements as manors, sokes, and berewicks does not occur. Whatever the reason, the compilers of the Danelaw Domesday seem little interested in questions of tenurial status, either as affecting the relations of peasants to their lord, or in connexion with

¹ In the entry relating to Shipley, Derbyshire, the accident of a disputed claim has brought out into the text a statement of the kind. Shipley was held T. R. E. by Brun and Odincar, but had passed by 1086 to Gilbert de Gand, whose usual predecessor in these parts was Ulf 'fenisc'. Accordingly there is appended to the description of the manor the statement 'Hanc terram dicunt homines qui juraverunt non pertinuisse ad Ulf fenisc T. R. E., sed ipsi i taini (sc. Brun and Odincar) ita tenuerunt ut potuissent dare et vendere cui voluissent' (fo. 277 b).
the dependence of our pre-Conquest lord upon another in the matter of soke or commendation. The Clamores of Yorkshire and Lincolnshire reveal to us somewhat of the tangled relations which existed among the northern thegns of King Edward's day, but these relations, in so far as they are known to us, cannot be correlated with the formulas which underlie the text of the local surveys. With regard alike to peasant and lord the status and liberties of the holders of lands before the Conquest, elsewhere noted as a matter of rule, are held considerations of little account in the Danelaw.

It is not impossible, however, that a casual recognition of the importance of these matters may lurk behind the occasional appearance in the Lincolnshire survey of an enigmatical formula, unknown elsewhere in Domesday, the *frige soca*.¹ Of this formula there are eight clear examples, and, to all seeming, no more.

¹ See Maitland, Dom. Bk. and Beyond, 93; Vinogradoff, English Society in the Eleventh Century, 124. It is best to consider the question of the *frige soca* apart from the marginal notes f²⁸, f, which occur at times in the Lincolnshire survey. The meaning of the latter remains doubtful.
tarum ad geldum. . . . Terra Brictmar fuit frig soca sub Fredgist.

(8) M. In Rosbi [Rauceby, Flaxwell wapentake] habuit [Ibid.]
Vlsi iii car: terrae et dim: bov: ad geldum. \( M _ { 2 } \) et Osmund, —iii bov: et dim.; et Siward—i car—habuerunt \( x i \) bov: terrae et dim: ad geldum. . . . Terra Siward frig soca sub Osmundo.

Now, we should certainly note that all these entries relate to vills situated within a moderate distance of each other. Seven out of the eight properties involved lay within the two south-western wapentakes of Kesteven; and Rauceby in Flaxwell wapentake is a bare dozen miles from Westby in Belisloc. This is significant, for it suggests that the casual appearance of the *frige soca* in the Lincolnshire survey is due to its omission from the local returns sent in from the greatest number of the Lincolnshire wapentakes. It can hardly be the result of chance that no example of the term can be obtained from Lindsey or Holland, to say nothing of Nottinghamshire or Derbyshire. But the interpretation of the term itself is a more serious matter. If, in accordance with the analogy of such a compound as *frigman*, we render *frige soca* by 'free soke', we still have to discover the sense in which these particular instances of soke were peculiarly free. Despite the inherent probability of the suggestion, we cannot well take *frige soca* to mean soke over free men,\(^1\) for at Thurlby, Carlby, and Braceborough the highest rank of the recorded peasantry consisted of villeins. An examination of the entries themselves may perhaps help us to a different solution. It is surely suggestive that six out of the eight entries refer to estates which before the Conquest had been divided among two or more owners, of whom one had possessed the *frige soca* of his fellows. That one thegn should possess soke over another, dwelling in the same vill, was no remarkable circumstance; but may we not infer that the essential freedom of the soke in the cases which have been quoted lay in the fact that it could be withdrawn at will by the inferior party? If we see in the Elnod of Thurlby, the Brictmar of Creaton, the five sokemen of Barholme, men who

\[^{1}\] English Society in the Eleventh Century, 124.
could go with their land and soke whither they would, we shall obtain a useful point of contact between the tenurial order of Lincolnshire and that which obtained in East Anglia. How far liberties of this kind were common in the Danelaw shires is a question to which no positive answer is forthcoming. When we are told that in the Lindsey vill of Cammeringham Siward had a manor of half a carucate, and Elnod likewise half a carucate sokeland of the former manor, we may suspect that the jurors of Beltisloe wapentake would have qualified the latter's holding as a free soke, but we can prove nothing. If the form of tenure which we have ventured to infer from the frige soca formula was at all widespread in the Danelaw, the compilers of the local surveys have chosen to tell us little about it.

The result is that the manorial organization of the Danelaw appears in Domesday as far more permanent and stable than the agrarian system of such a county as Cambridge. In the former case, we obtain definite information as to the local distribution of different types of tenement at the time of King Edward's death, with the obvious implication that little change in regard to this matter has occurred between this date and the taking of the Domesday Inquest; in the latter case, we are shown groups of men, dependent, indeed, upon a lord, and rendering him dues and service, but connected with him rather by personal ties than by their occupation of lands appurtenant, by prescription, to his several estates. The sokeman who could give or sell his land where he would is an unknown character in such counties as Lincoln or Nottingham. It would be highly rash to assume that the silence of Domesday respecting him proves his non-existence; but it would be no less unsafe to see merely a terminological difference between the sokes or berewicks of the Danelaw and the scattered members of the manors of Cambridgeshire. The whole structure of these rural groups varies in the two districts in question. Instead of the small holdings of isolated free men, interspersed among shots and furlongs rendering soke or custom to many different lands, which distinguished the typical village of Cambridgeshire, the Danclaw surveys reveal the existence of compact blocks of land, very frequently of entire
vills, in subordination to a common manorial centre. As a typical Danelaw estate, we may consider for a moment Geoffrey Alselin's Lincolnshire manor of Ruskington, formerly the property of the wealthy thegn Tochi, the son of Outi. To this manor were appurtenant as sokeland the entire twelve-carucate vills of Donington, Digby, and Rowston, half Dunsby and Leasingham, more than three parts of Brauncewell, and great part of Rauceby and Roxholm; Anwick, a vill of six carucates, was a berewick of the manor. We shall not lightly assume that an estate of this kind results from the chance agreement in commendation to a single lord of the 196 sokemen who, apart from villeins and bordars, inhabited the chief manor with its dependent members;¹ we may seriously doubt whether any one of these men possessed the right of withdrawing his land and service from the manorial group without his lord's consent. If we insist on the identity of vill and manor as the characteristic feature of the perfected manorial system, the Danelaw, of all England, will perhaps appear most remote, in local organization, from the manorial idea; but it may seem more than doubtful whether the system developed in estates of the type just described is not nearer to this end than are the unstable groups of free men revealed in the shires to the south and east.

In a future section of this essay evidence will be brought forward to show that the type of manor comprising a central estate with appurtenant property distributed among scattered vills already existed in the Danelaw shires as early as the middle of the tenth century. Direct evidence of this kind is, however, rarely to be obtained; and in general we are dependent upon conjecture in our attempt to trace the origin of the greater sokes of the Danelaw. The one circumstance which affords a clue, although a faint one, in regard to this

¹ Contrast the description of William Peverel's Northamptonshire manor of Coton-under-Guilsborough (V. C. H. Northants, i. 339 a). The members of this estate lay in Thornby—1 hide, 1 team, no recorded inhabitant: Winwick—3 virgates, 1 team, 1 sokeman: West Haddon—1 ½ virgates, ½ team, 1 sokeman: Cold Ashby—½ virgate, ½ team, 1 sokeman: Norton—½ hide, 1 team, 1 sokeman: Hollowell—1 virgate, ½ team, 1 sokeman. It is difficult to resist the conclusion that these five sokemen, distributed over as many vills, had severally commended themselves to William Peverel or his unnamed predecessor at Coton-under-Guilsborough.
matter is the curious relation which evidently existed in the eleventh century between the geographical area of the greater sokes and the boundaries of the respective wapentakes within which, in name, they lay. It is unusual for an important soke to extend beyond the borders of a single wapentake or group of adjacent wapentakes; it is highly exceptional for any wapentake to include more than a single soke of wide extent. For some cases illustrative of this principle a simple explanation lies to hand; the sokes of Bolingbroke, of Horncastle, of Newark, clearly result from the grant to their owners of the courts of the several wapentakes to which those places gave name; the Conqueror's grant of Well wapentake to St. Mary of Stow was, in effect, a transfer to that house of the rights which the Countess Godgifu had exercised in King Edward's time. But this explanation, though attractive, must not be carried too far; for in many cases the courts of soke and wapentake co-existed independently for centuries. The great soke of Rothley in 1086 comprised twenty-one distinct members all lying within the Leicestershire wapentake of Gosecote, yet nothing in the Rothley documents warrants us in assuming that the court of Rothley had ever been regarded as the court of Gosecote wapentake. Cases of this kind admit, in part at least, of another explanation, suggested by what we read of the Nottinghamshire wapentake of Oswaldbeck, the district in the extreme north-east of the county. Excluding certain small properties, this wapentake, as described in Domesday, fell into three divisions: a group of thirteen manors, to two of which small parcels of sokeland were appur-

1 Thus in Lincolnshire the soke of Waltham-le-Wold lay entirely in the wapentake of Haverstoc, that of Belchford in Gartree, that of Wragby in Wraggoe, Gayton in Louth Eske, Grantham in Aswardburn, Caistor in Yarborough. On the other hand, Greetham, the widest soke in the Danelaw, extending over thirty-five vills, is distributed among the wapentakes of Hill, Caiceworth, and Candleshoe; Kirton in Lindsey, between Manley and Corringham. In Leicestershire the soke of Great Bowden is confined to Gartree wapentake, that of Melton Mowbray to Framland; Gosecote includes the entire sokes of Rothley and Barrow-on-Soar. In Nottinghamshire the soke of Clifton was distributed over eleven members all lying in Rushcliffe wapentake; the royal sokes of Dunham and Orston respectively are confined to Bassetlaw and Bingham. Such trustworthy evidence as is available supports the tendency indicated in the text.

tenant, which had descended from various owners to Roger de Busli, the lord of Blyth; thirteen distinct pieces of sokeland annexed to the king’s distant manor of Mansfield, fifteen miles away upon the further side of Sherwood Forest; and a number of scattered tenements forming sokes or berewicks of the ancient estates of Sutton and Lancham, in the possession of the Archbishop of York. It is the peculiar value of this instance that it reveals the king with unmistakable clearness as the immediate lord of all those men who are not involved in subjection to other lords; and that it suggests the probability that some, at least, of the wider sokes of the Danelaw have resulted from a royal grant to thegn or earl of the king’s rights over all the unattached free men dwelling within a given wapentake. Such a grant, it will be obvious, would have consequences quite distinct from the effects of a direct bestowal of the wapentake itself; the independence of the ancient assembly would in no way be affected by the withdrawal of the king’s free men from its sessions.

But there can be little doubt that in many cases the king’s grant of soke merely gave sanction to an organization which had already come into being through the voluntary submission of its members, or through the aggression of some local magnate. In such cases, the tendency towards the inclusion of the soke as a whole within the wapentake in which the chief manor lay must be sought at a time before men had learned to conceive of a local court distinct from the traditional assembly of the district. If, as seems probable, the court of the immunist was anciently held at the same time and place as the meeting of the wapentake or hundred, we can the better understand the origin of a confusion which persisted

1 A somewhat similar case is presented by the sokeland of Melbourne, Derby. Within a short distance of Melbourne, but on the other side of the Trent, lay six vills, portions of which were surveyed collectively under the heading ‘Haec Soca pertinet ad Mileburne in Scarvesdele [Scarsdale] wapentac’ (fo. 272 b). The Domesday scribe has probably got the name of the wapentake wrong; but the king appears with sufficient clearness as the residual lord of the free men of the district.

2 We cannot ignore the possibility that in some cases the sokes of 1066 may represent local arrangements formed at the time of the Scandinavian settlement of the ninth century.
after the assembly of the sokemen had normally come to be held within the precincts of the central manor. In any case, it is to this quarter that we must look for the cause of one of the frequent local anomalies presented by the Danelaw surveys—the division of single vills between two distinct wapentakes. The Nottinghamshire vill of Staunton lies within the wapentake of Newark, except that a small portion is annexed to the parish of Orston in the adjacent wapentake of Bingham; and we shall not be wrong in identifying this disassociated tract with the seven bovates, three acres, which in 1066 were soke-land of King Edward's manor of Orston. In Lincolnshire, by the date of the Lindsey Survey, divided allegiance to the manors of Waltham and Tetney had split the vill of Waithe between the wapentakes of Hamfordshoe and Bradley. In Leicestershire, the fact that the vills of Caldwell and Wycomb, in Gosecote wapentake, form to this day an outlier in the wapentake of Framland, may safely be attributed to their ancient inclusion in the soke of Rothley. In such cases as these, it is clear that the force of seignorial control has proved stronger than the force of customary association in determining the boundaries of soke and wapentake; but the fact only points the more definitely to the origin of the manorial group in a segregation of tenements within the borders of the more ancient local division.

Thus far, we have mainly been occupied with the condition of soke-land geographically separate from the head manor to which it belonged. It must now be added that Domesday will often show us soke-land within the manorial area itself. 'In Bulcote, Swegn had 2 carucates of land and 2 bovates of land (assessed) to the geld, and in the same place (there are) 15 bovates of land to the geld, soke-land of this manor' (fo. 288b) is a Nottinghamshire entry of a type which has many Lincolnshire parallels. In a few valuable cases, as we have seen, the Lincolnshire Domesday inserts the phrase in dominio to dis-

1 Thoroton, History of Nottinghamshire (ed. Throsby, 1790), i. 303-5.
2 Probably the meeting of the immunist's men was held apart from, but contiguously to, the session of the wapentake court. In such cases isolated groups of men over whom the immunist acquired soke would naturally be required to join the meetings of their fellow dependants.
tistinguish the manorial portion of the vill from the adjacent
sokeland. Elsewhere in the record the distinction is less
clearly marked; and in a very large number of entries the
presence of what we may call inter-manorial sokeland is
expressed by a peculiar formula which deserves quotation:
‘In Eakring Ingolf had 6 bovates of land (assessed) to the
geld. There is land for two ploughs. There William,
Gilbert’s man, has 1 plough, and 3 sokemen on 3 bovates of
this land, and 2 villeins and 3 bordars having 2 ploughs’ (fo. 290b).
Entries of this type are virtually confined to the surveys of
Lincolnshire and Nottinghamshire; but within these limits
there are more than two hundred cases in which the extent of
the tenements belonging to the manorial sokemen is defined.
Just as, at one time, the compilers of the survey will explicitly
mark off the dominium from the soke, at another they will
content themselves with indicating the amount of land in the
occupation of the sokemen; it was immaterial that one entry
should run ‘In Merestune [Marston] habuit Alsi i car terrae ad
geldum in dominio et x bovatas terrae in soca’,1 and another
‘In Wellebrune [Welbourne] habuit Goduine xii carucatas
terrae ad geldum . . . Ibi habet Robert Malet . . . xxxv soche-
manni de vii carucatis hujus terrae’ (fo. 368).2 It is clear that
for some purpose it was important to preserve a record of the
amount of land held within each vill by the local sokemen.

The nature of this purpose is suggested by the fact that to
all appearance the extent of the holdings in question was
always expressed in fiscal terms. At times the tenements of
the sokemen form a definite proportion, an exact half, it may be,
of the total rateable area of the vill. We may particularly

1 fo. 357. Cf. fo. 358 b. The correspondence of sokemen with soks-
land is further illustrated by two entries on folio 349 b. (1) ‘In Staintune
[Market Stainton] habuit Godric ii carucatas terrae ad geldum. . . . Dimidia
carucata sochmannorum. (2) In Tadewelle habet comes Harold v caru-
catas terrae ad geldum . . . Duae carucatae in soca.’ The latter formula
is most frequently employed in folios 349–351 b.

2 Compare the following Yorkshire entry (fo. 314): ‘In Daltone ad
geldum xv carucatae et ii bovatae. Ibi Turgot i manerium. . . . In eadem
villa est soca pertinens ad ipsum manerium vi car. et vi bov. ad geldum.
Ibi est nunc i sochmannus.’ Occasionally, but very rarely, a special
entry is made of the sokemen’s teams. Fo. 304 b [Welton]: ‘In dominio
vi carucae, et xxxiii villani, et iii bordarii habentes ix carucas, et x
sochmanni cum vi carucis.’ Cf. fo. 286 [Tollerton, Notts.].
note three almost consecutive entries on folio 362 b. At Burton, near Lincoln, of 10 carucates, 6 bovates, representing the assessment of the estate, twenty-nine sokemen held 5 carucates, 3 bovates; at Dunholme four sokemen held 1 carucate out of 2 carucates laid on the vill; in the case of Roxby, we are informed by an interlineation that twenty-four sokemen held 21 bovates out of an estate rated altogether at 5 carucates, 2 bovates. Elsewhere in the record the relevant figures, it must be admitted, are less convincing; but there remains a fact which no less definitely emphasizes the fiscal aspect of the sokeman's tenement. If we consider separately the entries relating to Nottinghamshire, Lindsey, and Kesteven, the prevalent ratio between the carucates of assessment and the estimated teamlands is very different in each of these three districts.1 In Kesteven the teamlands are commonly exactly equal in number to the carucates of assessment, save that in the rich country on the Nottinghamshire border the carucates are not infrequently in excess. In Lindsey, save in some exceptional cases, the teamlands outnumber the carucates, and in Nottinghamshire the excess becomes so great as to suggest the probability that the teamland of this county is really a conventional quantity, the survival of an obsolete assessment.2 After this, it is surely significant that the average holding of the sokeman is at its highest in Kesteven, declines rapidly in Lindsey, and reaches its lowest point in Nottinghamshire;3

1 The varying relations of carucate and teamland in Lindsey and Kesteven will be discussed in V. C. H. Lincoln, i. Some idea of the facts may be gathered from Eng. Soc. in Eleventh Cent., Appendix ix. Table I, A includes the analysis of 121 entries in which the golding carucates exceed the recorded teamlands. Of these entries 77 relate to Kesteven, 21 to Holland, and only 23 to Lindsey, the largest division of the three.

2 V. C. H. Nottingham, i. 211-13.

3 These facts may be expressed in tabular form:—

| In Kesteven | 525 sokemen were seated upon 944½ bovates. |
| In Lindsey  | 917 " " " 779½ " |
| In Notts.   | 336 " " " 211½ " |

That is, upon an average, 10 sokemen in Kesteven would possess almost exactly 18 bovates; in Lindsey, rather more than 8¼; in Nottinghamshire, rather more than 6¼. The only Holland examples available relate to Frampton, where 2 sokemen had 4 bovates, and to Butterwick, where 36 sokemen had 9 carucates. Out of 56 Lincolnshire entries in which the average sokeman's tenement amounts to less than one bovate, 4 only relate to Kesteven. One Derbyshire entry may be quoted: at Ilkeston 10 sokemen had 2 carucates.
that the typical sokeman's tenement varies in close correspondence with the fluctuations of the prevailing villar assessments. Unless the figures in question represent fiscal terms, it is hard to see why the four sokemen of Barnby-in-the-Willows, on the extreme edge of Nottinghamshire (f. 284), should possess an average holding of but half a bovate, while the twenty-seven sokemen cultivating soil of identical texture and quality in the adjacent fields of Stapleford, across the Lincolnshire border, should hold among themselves no less than 6 carucates and 6 bovates of land (fo. 366 b). It is, in fact, clear that local differences of rating underlie the variations, of which the cases of Barnby and Stapleford are only examples chosen almost at random; but the fact is sufficient to establish the conclusion that the sokeman in 1086 was still held responsible for the geld laid upon the land which he cultivated. Whether this explicit definition of the tenements of the manorial sokemen may be taken to imply that the land of villeins and bordars was being acquitted of geld by their lord raises questions to which it is hardly possible to supply an answer at present; the antecedent probability which is thus created must be considered in connexion with the existing evidence respecting the dealings of the collectors of the geld with the local village communities, and this evidence is inconclusive. For our immediate purpose it is more important to remark upon the fact that, even within the precincts of the manor, the sokemen were regarded as in some sense external to its organization; that the tenements which they occupied were their own property, subject to seignorial exploitation, but co-ordinate with, rather than subordinate to, the lord's demesne. Their position under such circumstances was, no doubt, sufficiently precarious; but the later history shows that on manor after manor the sokemen of 1086 handed on their essential freedom to their successors, and in their lands we may with reason recognize a main source of the ancient freeholds enclosed within the manors of the Danelaw shires.¹

¹ Compare Massingberd, E. H. R. xx. 699. The determination of the extent and situation of ancient freeholds would be an interesting subject for local investigation.
In all that has hitherto been said, we have been arguing for the general rule that underneath the terminology of the Dane-law Domesday there lies an implied division of all tenements into two great classes, distinguished by the nature of the lord’s interest in the land described. Should the land in question be regarded as belonging to the lord, it will be reckoned his inland, and if it formed a subordinate portion of some greater estate, it will normally be entered as a berewick of the latter. Should the lord merely appear in relation to the land as the recipient of dues and service from its inhabitants, it will be returned in our record as sokeland. In face of much diversity of local custom, the compilers of Domesday seem to be trying to maintain this distinction; and if the result of their labours seem to lack somewhat of the symmetry of an ordered manorial system, we shall do well to remember with what a mass of heterogeneous local custom they had to deal. It may be proper at this point to indicate some of the more serious complications which tend to make the distinction before us less definite than might at first sight appear.

If we restrict ourselves for the time to the standpoint of the manorial lord, we shall see that it was possible for an estate to be burdened in many ways, determined by the varying relations in which it stood with regard to other estates. A lord might well have a manor of which the soke lay in another manor external to his fief.¹ This presents no serious difficulty; but it was equally possible for a lord to hold de soca a parcel of land the soke of which was yet reserved to some other lord.² Such cases compel us to recognize that jurisdiction, dues, and

² So, for example, in that part of Hagworthingham, Lincoln, which is entered among the sokeland of Gilbert de Gand’s manor of ‘Torp’. Fo. 355: ‘In Haberdingham vi bovatae terrae ad geldum. Terra x boum. Socam in Greetham.’ On folio 349 Earl Hugh is assigned a parcel of land in Hagworthingham as sokeland of Greetham.
service were separable things, that there was no necessity for a man who rendered service to a lord to be that lord's justiciable, and that the agrarian and juridical ties between manor and sokeland were not bound in practice to coincide. But it is an added complication that by private arrangement the soke of an estate was partible between individuals. When, for example, we are told that two brothers had equally divided among themselves the soke which had belonged to their father, we may see here the result of a family treaty by which half the dues received from the estate, half the profits of the manorial court, and half the services rendered at the manorial demesne had separately been assigned to each of the contracting parties.¹ Some personal arrangement of this kind presumably underlies the surprising appearance of a half sokeman on Robert de Stafford's Lincolnshire manor of Scredington and Robert Dispensator's sokeland of Roughton.² Then, too, it was possible in King Edward's day for one lord to give soke to another in the witness of the wapentake, a fact which rendered possible a variety of contested claims to land and jurisdiction.³ On all grounds, it is impossible for us to conceive of the manors of the Danelaw as constituting a series of mutually exclusive groups: the burdens which determined the organization of the individual manor were so different in character and so diverse in origin that here and there, inevitably, some overlapping was bound to result.

It is further to be noted that the systematic employment in regard to this district of an unvarying terminology serves to conceal the fact that the local organization, which that terminology was intended to represent, was at this particular time in a peculiarly unstable condition. The whole scheme according to which the Danelaw Domesday is drawn together implies the assumption of an absolute continuity between the conditions which obtained in King Edward's day and those of the twentieth year of King William. That this assumption covers a remarkably transparent fiction is sufficiently obvious; but it is not so easy to make the necessary allowance

¹ Fo. 375. The division gave rise to a dispute between the Bishop of Durham and Eudo son of Spirewic. Compare fo. 340 b with fo. 359 b. ² Fo. 368 b, 363 b. Cf. the Torrington entries on fo. 358. ³ Fo. 376 b.
for it when we argue back from the recorded facts of 1086 to the agrarian organization of 1066. We might illustrate the resulting uncertainty in many ways. There is, of course, a marked general tendency towards the conversion of pre-Conquest sokeland into manorialized estates; and yet there exist definite cases in which the reverse process has happened. If a thegn of 1066, holding a manor of which the soke belonged to some great estate, forfeited his land, it might well be that the land in question should appear in Domesday merely as sokeland of the larger manor to which it was jurisdictionally subject.¹ So too with reference to the difficult questions presented by the appearance of villeins or bordars upon sokeland, we may recognize that these men may very possibly represent native peasant proprietors of humble rank, and yet suspect that the new lord, by purchase, exchange, violation of local custom, assumption of fiscal responsibility, or succession to escheated tenements, has become possessed of land in dominio which our record is not careful to distinguish as such. Already in 1086 the great estates of the Danelaw with their satellitic dependencies were beginning to break up into independent maneria, and new forms of local association were coming into being; Chesterfield, which is entered in Domesday as a berewick of the royal manor of Newbold (fo. 272), appears in 1093 as a separate manor with berewicks of its own.² Vill and manor were as yet far from coincident; in the Danelaw this equation was never to become the rule;³ but the disintegration of the greater estates was combining with the general amalgamation of the smaller maneria to produce an intermediate type of estate; an estate forming an independent agrarian unit, in which the features characteristic of the later manorial economy might find room for development. The Domesday Inquest was taken while this process was still in an early stage; but the tenurial conditions of the Danelaw were each year

¹ Fo. 351. East Keal, Lincoln. In 1086 4½ carucates were held here by Uvo Taillebois as sokeland of Bolingbroke, but at the end of the entry we are told ‘Ibi habuit Summerled manerium, et valebat xx solidos T. R. E.—modo simile’. So fo. 303 b: ‘Wamesfeld, York. ⁴ Ad Osbolde-wic [Osbaldwick] pertinet, scilicet tamen manerium fuit.’
² Mon. Ang. viii. 1271.
³ See below, pp. 64-9.
passing more and more out of correspondence with the facts on which the terminology of the Survey was based.

And lastly, this terminology itself implies a cross division between the different kinds of tenements and the different classes of persons familiar to its authors. On the one hand, we are given the manor, the berewick, and the soke, as the three recognized forms of rural organization; on the other hand, the villeins, bordars, and sokemen, who constitute the rural population, are separated from each other by distinctions which have only a secondary reference to the position occupied by the members of each class in respect of their agrarian environment. On this we have already remarked; but it must be reiterated that we remain in virtual ignorance as to the status enjoyed by the predecessors of these men in King Edward's day. The classical text descriptive of the organization of society in late Anglo-Saxon times, the Rectitudines Singularum Personarum, supplies information totally at variance with such evidence as we possess respecting the social classes revealed in the Danelaw Domesday. In part, no doubt, this discrepancy is due to the purpose which inspires the earlier record. The compiler of the Rectitudines had no intention of undertaking an analysis of the different orders of society; he wished to describe the services which were due from the several ranks of the manorial peasantry. But it is further probable that the Rectitudines relate to conditions which obtained in the south or south-west of England; and an argument from Dorset under King Æthelred to Lincolnshire under King William demands certain preliminary assumptions which we should be very unwilling to make, for the author of the latter tract explicitly tells us that services are many and various, and that he only writes of what he knows. It is at least certain that any attempt to identify in the Danelaw of 1086 the social ranks which are described in the Rectitudines breaks down in each instance at some critical point. If, following the terminology of the Glastonbury Inquisition, we

1 The Wantage code of Æthelred II, which from its terminology relates exclusively to the district of the Five Boroughs, contains little directly bearing upon the mutual relations of different social ranks.

would see in the *geneat* of the *Rectitudines* the representative of the Domesday *villanus*, we shall be compelled to ascribe to the latter a degree of economic independence which is scarcely warranted by the Danelaw texts, and to ignore the many points of similarity between the *geneates riht* of the *Rectitudines* and the services of the radknights of the western shires. Even more improbable is the equation which has been suggested between the *villanus* and the *gibur*; for it is a distinguishing mark of the latter's condition that he be provided with stock by his lord, and the ubiquitous class of villani is recorded on many a Danelaw manor whose former owner, to all seeming, was himself but little wealthier than were the peasants around him, nor can it be ignored that elsewhere in England the *gibur* is represented by the *burus* of Domesday.¹ It cannot be doubted that the villein class was recruited in part from both geneats and geburs, but the uniform terminology of Domesday has made it impossible to estimate the relative proportions of these classes and to recover the details of their pre-Conquest status. The correspondence seems closer between the *cotsetle* and the *bordarius*, and yet here too the *bordarii* as a whole seem considerably wealthier than the oxless cottagers of the *Rectitudines*; nor may we fairly deny to the bordar of 1086 his share in the common fields of his vill. Most plausible of all, it may be, is the equation of the *geneat* with the *sokeman* of Domesday; and in this case we obtain for once an explicit documentary contradiction of the suggested identification. In view of the writ, entered in that most respectable of all English cartularies, the *Textus Roffensis*,² by which the Conqueror grants to Archbishop Lanfranc Freckenham in Cambridgeshire as Thurbeorn and Goti held it of Harold in regard to 'lands, and

¹ This must not be pressed too far, for the *burus* appears so rarely in Domesday that it is certain that no systematic record is made of his existence.

² Wharton, *Anglia Sacra*, i. 336. The date of the writ is approximately determined by the fact that Lanfranc gave the manor to Bishop Gundulf of Rochester (app. 1077), and that before his fall in 1082 Odo of Bayeux presided over a plea relating to the appurtenances of the manor, then in Gundulf's possession.
meadows, and pasture, and wood, and geneats, and sokemen', the geneat of Cambridgeshire was clearly a different type of person from the sokeman of that shire. Further than this we need hardly go, for the whole tenor of the Rectitudines suggests that in it we are reading the description of some fully manorialized estate, in which by specialization of function all the local peasantry have been brought into some definite relation with an elaborate and highly developed organization of labour service. We shall travel widely over the Danelaw shires before we find a manor of this sort; and unless or until some other record comes to light we must, it may be feared, be content to take our sokemen, villeins, and bordars very much as we find them in Domesday.

1 The relevant Domesday entry occurs at fo. 190b, under the name of Gisleham [Isleham], to which Freckenham was appurtenant (Anglia Sacra, i. 339). In 1066 twelve sokemen, all of whom could give and sell their lands, held one hide under 'Turbert'. There was also a popular group of eleven villani. Cf. Freeman, Norman Conquest, iv. 371.

2 If, as is suggested, the Rectitudines comes from the south of England, it would not be expected that the sokeman should be included within its scope. Unlike the villein and the bordar, the sokeman bears a name of English origin, and the writ quoted above carries back the name in question to the time of King Edward.
II

In a former section of this essay it was attempted to indicate the main distinctions between the two recognized types of subordinate tenement, known respectively as the berewick and the soke. It may be well at this point to consider some of the various forms assumed in the Danelaw by the manorial organization as a whole; and in particular to inquire how far it may be possible to trace these forms as already in being in the Old English period.

It is unfortunate that at the very outset of this inquiry we are faced by a problem which seems at present likely to remain insoluble in detail: the question as to the exact meaning which the term manerium itself bore to the Domesday scribes. The brilliant section which the late Professor Maitland devoted to the manor in his Domesday Book and Beyond ¹ showed the impossibility of a retrospective application of the definitions recognized by the lawyers of the sixteenth century; and it enunciated a new theory upon the subject, of complete originality, which, if valid, would have supplied a clue to many difficult points arising from the terminology of the Survey. But the theory that the manor was the ultimate unit in the collection of the geld has, one must sorrowfully admit, not stood the test of detailed criticism; and the tendency of scholars at the present time is to deny that the word manerium was in any sense a technical term to the men of 1086. And so the inquiry has come to assume somewhat of a different form; and instead of seeking for definitions which shall be of general application we are rather compelled to investigate the various characteristic features assumed by the manorial group in different parts of England, and in particular to ask in what manner these features may have been relevant to the general purpose of the Domesday Survey.

In the shires with which we are here concerned we are at ¹ Pp. 107-28.
once impressed with the care taken by the Domesday scribes to record the name of the native owner of every tenement to which the manerium formula is applied. We remember that in the famous Ely writ the commissioners were required to ask who held the mansio in King Edward's time, as well as the name of the contemporary owner; and in regard to the Danelaw shires, other than Leicester, the answers to the former question are recorded with unusual consistency. Now this fact seems to argue a general correspondence between the manerium of Domesday and the heafod botl of late pre-Conquest documents, the capitale messuagium of the thirteenth century. Whatever may have been the native word which was represented by the Domesday manerium, and there is some evidence to suggest that the Old English tun was employed in this sense in the eleventh century, if not earlier, it must sometimes have connoted the lord's dwelling. Direct evidence in this matter is somewhat to seek; but it is supplied in a measure by certain Yorkshire entries which suggest that the recognition of a given tenement as a manerium depended on the former existence of a 'hall' on the property. On folio 317 occur the following pair of entries:

1 Frequent instances in which the name is deliberately interlined or corrected show the importance which the scribes attached to this matter. The formula 'A tenuit B pro manerio' is only used when through exigencies of space the entry relating to a manor was not, according to custom, made in column, where the symbol M could be applied to it.

2 Such a conclusion is made probable, for instance, by the application of the name 'Esgarestun' to a Berkshire estate held in 1066 by 'Esegar', the Staller, an estate in which all the normal features of the manorial economy were already present. Other evidence bearing upon this point is cited in my essay on the Place-names of Berkshire (University College, Reading), pp. 26, 28. It is probable that beside the common employment of OE. tun to denote a village or village community there persisted a distinct usage, going back to the original meaning of the word—'an enclosure'—a usage by which the word came to describe the dwelling or homestead of the lord apart from the neighbouring village. The OE. word most nearly approximating to the Norman manerium would seem to be ham, an equation not affected by the failure of the suggested correspondence of ham and villa. (Seebohm, English Village Community, 287.)
S. et B. In Hindeleia [Hiendley] sunt iii carucatae terrae ad geldum ... Tres car: sunt in soca de Tateshalla et in inland.

The distinction of the first of these estates as a manor is clearly occasioned by the existence there, in 1066, of Northman’s hall, notwithstanding the fact that by the date of the Survey his holding had been incorporated in the great manor of Tateshall-Pontefract. The possible identification of manor and hall is further suggested by two entries which come earlier in the Yorkshire Survey:

fo. 309. In Langeton ix car: ad geldum ... Ibi habuerunt Torfin (iii et dim:) et Finegal (ii car:) ii haulas, Torfin cum saca et soca; et tercius, nomine Tor, reliquam terram cum saca et soca, scilicet non haula.

fo. 309 b. In Stradford ad geldum vi car: ... Ibi fuerunt Tor et Torfin; iste habuit manerium, alius non.

It is evident that these entries are really expressing a similar distinction in different phraseology: the aula of the first is clearly represented by the manerium of the second. Very suggestive also are the following entries from the Nottinghamshire Survey:

fo. 286 b M₃. In Fentone [Fenton] habuerunt Ulfac et Leuric et Grim i bovatam terrae et iii partem i bovatae ad geldum ... Wasta est praeter unum bordarium ... Ibidem habuit Speravoc ii bovatas terrae et ii partes unius bovatae ad geldum. Terra i car cum saca et soca sine aula.—for the absence of a hall on Speravoc’s property is plainly the reason why it is not distinguished as a manor by the marginal symbol M.¹ Finally, the description of Normanton-on-Trent on the previous folio of the survey—'M₅. In Normentune habuerunt v taini, Justan, Durand, Elward, Ulmar, Aseloc quisque aulam suam et unusquisque i bovatae terrae et v partem i bovatae ad geldum'—shows not only that the normal manor would contain its hall, but that these halls might well be humble structures, the dwellings of men of little wealth; the combined estates of these five thegns had been worth but ten shillings in King Edward’s time, and none

¹ Compare folio 306 [Yorkshire]: ‘In Mitune [Myton] habuit Ligulf i M de iii carucatis et dim. ... In Bratfortune [Brafferton] habuit Haltor i carucatam sine halla.'
of them can be identified with certainty elsewhere in the hire.

From the standpoint which we have now reached, therefore, it seems legitimate to say that the typical Danelaw manor of 1066 comprised a thegn's residence, situate upon an estate to which services were rendered, and at which dues were paid. From this type, indeed, there are many and wide divergences, but this hardly affects the general correspondence of an overwhelming majority of actual instances. It may, in fact, be suggested that the search for manorial definitions in the past has caused somewhat undue importance to be assigned to those manors which do not conform to the general type. The type itself is susceptible of great variation in detail; but geographical considerations, private arrangements made by individual landowners, incidents in the unrecorded family history of the lesser thegs of the Danelaw, must all fully be allowed for in this connexion. Perhaps, after all, the wonder is rather that there should be such substantial uniformity, in all significant features, among estates so diverse in history, and scattered over so wide an area.

Now, in this connexion, it is well to remember that by making an accurate record of the names of all pre-Conquest holders of manorial tenements the compilers of the Danelaw Domesday were taking a step which was necessary if the main purpose of the Inquest were adequately to be fulfilled. The possession of an estate carried with it a liability to the payment of geld; very possibly, as we have seen, it implied the responsibility for the geld due from all those portions of the estate which constituted the lord's inland; and it is at least clear that the latter's title rested upon his succession in the holding in question to some Englishman who in the regard of the law was among his recognized antecessores. It therefore seems distinctly probable that in the desire to provide for the settlement of disputed claims to the ownership of land we have the reason underlying some of the more prominent features of the Danelaw Surveys: the systematic definition of given estates as maneria, the care taken in such cases to record the name of the pre-Conquest owner, and the attribution of each parcel of
inland or sokeland to its own proper manorial centre. It will be seen that the very complexity of the local organization of the Danelaw made it peculiarly necessary to restore, so far as might be, in the terminology of the Survey, the \textit{status ante Conquestum}, and it is at least probable that the accurate registration of all pre-Conquest \textit{maneria} represents one aspect of the process. It would be straining a slender thread of evidence to assert that the Danelaw \textit{manerium} always denoted an estate passed by a single title; but with the Clamores of Yorkshire and Lincolnshire before us we cannot doubt that the majority of disputed claims would involve, at some stage or other, an inquiry into the extent or ownership of some pre-Conquest \textit{manerium}, and the Domesday scribes seem to be trying to supply the information which was necessary if the manors of King Edward's day were to be brought into legal connexion with the estates which represented them in 1086.

It would appear, then, in relation to the manor, soke, and berewick of the Danelaw that the two latter only are contrasted types of tenement. The manor is the lord's residence, the \textit{capitale messuagium}, the tenement of which the possession carries a title to all the land assigned to the estate, either as inland or sokeland, by local repute. The word \textit{manerium}, it would seem, bore no necessary relation to the facts of agrarian or fiscal organization, it was sufficiently vague to cover the most diverse forms of internal arrangement, it was no technical term of law. We may suspect, indeed, that the smallest manors of the Danelaw may, after all, be distinguished in a somewhat arbitrary fashion from the tenements of the independent sokemen who inhabited the unmanorialized vills of the north and east; one manor, we know, might well render soke to another manor, and questions of personal rank, which we can never hope to solve, may at times have influenced the compilers of Domesday when they assigned a manor to one vanished Englishman by name, and consigned his fellow to the undifferentiated class of \textit{sochemanni}.\footnote{There is one, and apparently only one, Lincolnshire entry in which sokemen appear as holding manors before the Conquest. Fo. 366: 'East Deeping. Ibidem habuit S. Peter de Burg v soch(emannos) super...} On all grounds it is
well to be indefinite in regard to this matter; for concerning
the smallest manors of the Danelaw we have no pre-Conquest
vidence at all, while already in 1086 these anomalous estates
were rapidly being amalgamated into larger agrarian units.
But at least we shall have one complication the less if we dis-
gage the manerium from its unnecessary contrast with the
aland and sokeland recorded for us in relation to subsidiary
holdings.

From all this, it will appear that any classification of the
maneria of the Danelaw must recognize the essential distinc-
tion between the seigniorial bond which united manor and
okeland and the proprietary bond which united manor and
berewick. This distinction cannot, indeed, be applied with
guine in relation to individual estates; the seigniorial and pro-
prietary forces combine to produce the discrete maneria of the
Danelaw; but it is the peculiar value of the formulas which
we are considering that they enable us to trace the local
application of these forces with a precision unattainable when,
as in the case of Leicestershire, the formulas fail us. And, on
the whole, we may fairly relegate to one great class all those
estates in which a central messuage carries a right to the
receipt of dues, and the exaction of service and suit of court
from tenements which are geographically separated and out-
side the immediate ownership of the lord; making always the
reservation that it is generally impossible to say whether the
economic force represented in the payment of rent and con-
suetudines, the jurisdictional force represented in subjection to
sake and soke, or the tenurial bond created by the act of com-
mendation, is the more powerful in maintaining the organiza-
tion of the group. We certainly may not affirm that the very
large number of maneria which will be referred to this class

v maneria de ii car. terrae et vi bovatis ad geldum. Here the sokemen
were to all appearance tenants of the abbey, differing, probably, in little
except rank from those thegnly holders of abbey lands, of whom Here-
ward was the most famous. The formulas employed in this entry are
unique and remarkable, and a scribal error might be suspected were it
not that sokemen appear as holding manors in a number of Huntingdon-
shire and Northamptonshire entries. We may question, in passing,
whether the Domesday commissioners would have thought it proper to
describe the normal sokeman's toft as a 'hall'.
do more than correspond to one general type; we have seen that since the Conquest lords have steadily been bringing fragments of discrete sokeland within the sphere of the dominium, and we may not press the terminology of the survey too far; but if any classification of estates is to be attempted at all, then the manor with dependent sokeland must be regarded as one distinct form of local organization.

If, now, we pass to those estates which may be understood as resting upon a proprietary basis, the work of classification seems naturally to turn upon the varying relation borne by the tenurial unit, the manor, to the agrarian unit, the vill. Every where in England manorial development was making for the coincidence of these units; but the process had gone but little way in the Danelaw at the time of the Norman settlement. For the purpose of our present classification we may relegate to a separate division those manors which are contiguous with the vill which give them name, which have no dependent berewick or sokeland, and in which the common fields of the vill form the sole economic basis of the estate; but, at least in regard to Nottinghamshire and Lincolnshire, an extended study of the local surveys is necessary before a manor which has already assumed this form in 1066 may be discovered. The distribution of landed property in the Danelaw at the close of the Old English period, so far as our evidence goes, had by the process of time been thrown out of all relation to the ancient and natural agrarian divisions of the country, the vills. And it is just here that the work of the new Norman lords, as revealed by Domesday, is on the whole most obvious and most beneficial. In restoring, if not in creating, a general correspondence between the unit of agrarian life and the unit of seigniorial organization, they had begun twenty years after the Conquest, a process which was to arrange

1 The significance of the type is not affected by the fact that parcels of land in neighbouring vills will frequently be annexed as berewicks to the chief manor, as at Mickleöver, Derby, Newark and Dunham, Nottingham.

2 The Nottinghamshire Survey makes entry of some 270 vills. Out of this number it would be difficult to cite more than twenty cases in which there was exact identity between vill and manor in 1066. Most of these exceptions are places of little importance, and some of them have disappeared since 1086.
the manorial geography of England on the lines most conducive to agricultural efficiency; a process which in an unconquered England could never have been attempted. We may admit that their work was followed by a depression of the peasantry subject to their rule, though there is little direct evidence to suggest that this frequently happened in the Danelaw shires; but it is well to remember that the imposition of a heavier burden of service was accompanied by changes in the direction of administrative economy which made the incidence of that burden less severe; in particular, cases where the labourer had to tramp across country to his lord’s remote demesne would now rarely occur.¹

One obvious aspect of these changes is presented by the deliberate amalgamation of small estates into single manors, coincident with the vills from which their names were derived. Before the Conquest the lands which comprised the Nottinghamshire sief of Roger de Busli (fos. 284 b–287) had been divided into 183 distinct maneria; as recorded in Domesday, the number had been reduced to ninety. The organization, in 1066, of these small maneria is utterly obscure; but we may with perfect confidence infer a considerable degree of interdependence in the matter of their agricultural life. In Nottinghamshire, at Weston-on-Trent (fo. 285 b), where there were once six manors, at Eaton (fo. 284 b), where there were ten, at Carlton-in-Lindrick, comprising six (fo. 285), at Hawton, comprising five (fo. 289 b), we certainly cannot endow each manor with a distinct set of common fields, even although we cannot now recover the details of the arrangements which must have obtained in regard to the practices of coaration, the use and apportionment of common pasture, and all the multifarious activity of the village community. In such cases as Killingholme-in-Lindsey, where in 1086 a population of eleven villeins was working an estate, divided, twenty years earlier, into six manors (fo. 347), the latter term cannot in any intel-

¹ It is to be noted that the whole question of the labour service performed in King Edward’s time by the men of outlying membra has to be considered without direct evidence. In most cases it is probable that the men of the central manor were sufficient for the performance of the work required by the home farm.
ligible sense have an agricultural signification; the thegn's hall, though not recorded in this particular entry, is clearly the feature which has constituted the *manerium*. And in a number of cases, not now to be determined, we may suspect with reason that the division of a small estate into many maneria results not from the fortuitous association of a body of small landowners, but from the partition of an inhabited holding among a group of kinsmen. Those five thegns of Normanton-on-Trent, each of whom had his hall, bore each an equal share, a bovate and its fifth part, of the assessment laid upon the whole property; and we are reminded of the four thegns of Candleshoe wapentake of whom it is said that in King Edward's time they had divided their father's land among themselves *equaliter et pariliter*. The Survey will at times explicitly indicate the relationship existing between the holders of a divided manor; and in those cases in which a whole group of small estates has been given outright to some Norman lord, we may readily believe that the original unity of the property lay well within the memory of the people of the country-side assembled in the wapentake court.

But this does not always happen; in many villages the little manors of 1066 have been given severally to as many different lords, and in subsequent history have followed quite independent lines of devolution. A remarkable illustration of this development is afforded by the Lincolnshire village of Keelby in Yarburgh wapentake, in regard to which our evidence is unusually consistent. The situation in 1066 is best explained by a table, which incidentally displays the combination of many fractional assessments into a neat 'duodecimal' total of six carucates, and thus gives assurance that the whole of the vill is under review:—

1 Fo. 375 b.
2 It may, of course, happen that even when a group of manors within one vill has been given outright to a new lord the individual manors were unequal, at least as regards assessment. Thus at Rothwell, York (fo. 317 b), Harold had 14 carucates; Bared, $7\frac{1}{2}$; Alric, $10\frac{1}{2}$ bovates; Stainulf, the same.
These figures are instructive in many ways. The proportion of sokemen to villeins and bordars is lower than the average for the county as a whole; a fact probably resulting from the subdivision of the vill into small estates; for sokemen are found in greatest numbers either on unmanorialized sokeland, or else within the bounds of the larger manors of the district.\(^1\) There was little room for the independent freeholder upon the two bovates which Alwine possessed in Keelby. It may also be noted, in passing, that on each manor the carucates and bovates of assessment approximate to half the number of teamlands assigned to the estate; it is just in this quarter, on the north-eastern edge of the Lincoln Wolds, that the Lincolnshire teamlands reach their greatest point of excess over the figures which relate to the geld. But for our immediate purpose the most important feature of the vill is the complete independence, in regard to tenure, of the individual manors into which it was divided. Nearly one-third of the vill, in 1086, belonged to the great royal soke of Caistor, and as such does not concern us here, but Elaf’s manor had passed to the Archbishop of York; that of Sigar, to the Bishop of Bayeux; that of Aldene, to the Bishop of Lincoln; that of Alwine, to Ivo Taillebois; Rolf’s land, to Dru de Beurere; that of Grimchel, to Norman d’Arcy; that of Eiric, to Waldin

\(^1\) In this entry *vel Cotes* is interlined above *Chelebi*, and in the Lindsey Survey this carucate is assigned to Coates. But it is wanted to complete the assessment of Keelby, and the name of this vill is not marked for deletion in fo. 360. Presumably part of the property lay in Coates, and the entry makes mention of a *salina*, or salt-pan, which we should expect to be found near the coast, a condition which applies to the latter vill.

\(^2\) For example, Robert de Todení’s three-carucate manor of Allington included a population of 14 sokemen, 5 villeins, and as many bordars.

'Ingeniator'. It is evident that at Keelby the identity of vill and manor was as remote in 1066 as in the time of King Edward. And not only is this the case, but the Lindsey Survey, thirty years after Domesday, shows the persistence of these little manors within the vill until at least the middle of the reign of Henry I. Changes of a catastrophic order had placed a new series of lords in possession of the vill. But the seven manors of Keelby maintained their independent existence through all.¹ The successor of the Archbishop of York still held the 4½ bovates which had belonged to Elaf; the Bishop of Bayeux was represented by Manasser Arcy; the Bishop of Lincoln, by his successor; Ivo Taillebois, by Ranulf Mischin; Dru de Beurre, by Stephen of Aumâle; Norman d'Arcy, surviving from a previous generation, remained in possession of his holding; Geoffrey, the son of Payn, had in this case obtained the land of Waldin Ingeniator. The divided lordship of the village of Keelby can thus be established by documents extending over a period of half a century; and this although the figures given by Domesday argue an inevitable co-operation in agricultural work between the men of one manor and the men of another. The ten plough-teams which found employment within the vill in 1086 result only from the combination of the scattered oxen of the men of eight distinct lords with the teams, fractional or entire, working upon their respective demesnes. And so we are reminded again that beneath the superficial distinctions of manor, sokeland, or inland, there lies throughout the ultimate agrarian unit, the vill.²

This may be further illustrated in another way. There has been preserved a remarkable series of documents relating to the Nottinghamshire villas of Staunton, Alverton, and Kilvington, which strikingly reveal both the survival to a late period

¹ As the soke of Caistor was royal desmesne, it is excluded from the scope of the Lindsey Survey.

² The intermixture of different estates in the open fields of a village is sometimes illustrated in a striking way by the distribution of the village tithes. The tithes of Flawborough, Notts, for example, were divided between three different churches in a manner which clearly reproduces the ancient division of the village between its various lords. From a detailed survey of 1637 it is evident that three adjacent strips in the fields might well tithe to as many distinct parishes.
of estates formed already before the Conquest, and also the intermixture of these estates in the open fields of the respective villages. Details could not well be given here without a consideration of minute points of local topography, but it may at least be said that the evidence supplies a useful warning against an exaggeration of the completeness with which the work of manorialization was effected after 1086. The village of Alverton became united at last in the hands of one lord; but it was in the reign of Queen Elizabeth. In the thirteenth century the several Domesday estates are still to be traced, though with some difficulty, scattered in many strips over the village furlongs, interspersed among each other in a way which admits of no simple explanation; and the tenurial geography is complicated by the results of feofments of which no explicit record has been preserved, made by lords whose identity can only be guessed at. A grantee will speak of his *capitale messuagium* in a context which implies that it lay in line with the tofts and crofts of the village peasantry; his lands will be scattered indiscriminately over the common fields. The court of any given manor was far from being a court for all the men of any entire vill; in the time of Charles II, twice a year and on the same days, two courts were held in Staunton for the two manors into which that vill was divided, and to one of them the men of Alverton and Kilvington did suit, vills which were already sokeland of Staunton in the time of King Edward. Nowhere in any early document is there a hint that any lord's demesne was drawn into a compact holding round a central farm. And although there is evidence which suggests a depression of some at least of the inhabitants of Alverton between 1086 and 1190, many of the later freeholders within the village may well be the successors in title of Domesday sokemen.

And just as we are compelled to admit the frequent persistence in this region of the pre-Conquest division of vills, we are also bound to recognize the occasional survival of those anomalous territorial associations, the Danelaw sokes. The survival of the great Leicestershire soke of Rothley is well known, owing in great part to the preservation of its thirteenth-century custumal, which reveals the internal economy of one of
these groups with a clearness unattainable in other cases. But Rothley was only one soke out of many which maintained their substantial integrity into the thirteenth century or later. In Lincolnshire, for example, Queen Edith's soke of Gayton le Wold, held by the King in 1086, had passed entire to the Count of Brittany by 1116; an original charter of approximately 1154 has been preserved, in which Count Alan grants to the men 'de Gattunasoca' all the liberties which they enjoyed in the time of Count Stephen his grandfather, and in the thirteenth century the soke was held by Peter of Savoy, successor of the Counts of Brittany in the English earldom of Richmond. The first entry in the Lindsey Survey assigns to the Earl of Chester 34 carucates 2½ bovates 'in Halton et Soca', the exact assessment, in Domesday, of the manor and soke of West Halton, which belonged to Earl Hugh of Chester, and before him to Earl Harold of Wessex. In Derbyshire, in 1204-5, William Briwere was holding the manor of Chesterfield with Brimington, Whittington, and the soke and wapentake of Scarsdale, a fact which suggests that the Domesday soke of Newbold, of which Chesterfield was then a berewick, arose in close connexion with the court of the wapentake in which these places lay. In general, it may be said that the larger the soke the greater was its power of resistance to disintegrating influences; and royal sokes, in particular, were held together by the exaction from the whole body of aids and tallages. In 1177 the sheriff of Nottingham accounted for £13 13s. 4d. as aid of the soke of Oswardbeck, and also for the aids of Orston and Arnold, royal manors with appurtenant sokeland in Domesday. In 1197-8 the tallage of the soke of Mansfield produced £6 13s.; in the first year of King John the tallage of Dunham soke brought in £3 16s. More important in this respect, nevertheless, was the performance of suit to the court of the soke: in the reign of Henry III a peasant grantor, in

1 Lindsey Survey. 2 Ancient Charters, 54-5 and notes. 3 Such, at least, is my reading of the abraded opening of the MS. Mr. Greenstreet, in his translation, read 'Halton and Scotho', which is impossible; Mr. Chester Waters (Associated Architectural Societies Reports and Papers, xvi. part 2, 181) ignored the difficulty. 4 Pipe Roll, 6 John. 5 Pipe Roll, 23 Henry II. 6 Pipe Roll, 9 Richard I.
conveying land to his brother, is careful to add that the rents reserved to the lords of the fee are in lieu of suit to their courts, to shire andwapentake, 'et maxime pro secta quae debe tur in sochagio de Horstona die Sancti Thomae apostoli ante natale Domini.' In the time of Charles II the great court on St. Thomas' Day was still held for the soke of Orston. In the north of the same county the important soke of Oswardbeck can be traced in successive grants until at least the reign of Henry VII; under James I we are told that John Thorneaughe, knight, was bailiff of the king's liberty of Oswardbeck soke; and in the thirteenth century we obtain a glimpse of the soke from the tenant's point of view when we are told that Petronilla of Woodhouse held lands in la Wodehouse in the soke of Oswardbeck, and a moiety of a mill in Tilne, doing suit at Oswardbeck court. Even at the present time courts are held in North Nottinghamshire which descend directly from the soke of Sutton which the Archbishop of York held in 1066. We cannot, in face of the evidence of which these facts are merely casual illustrations, deny that during the twelfth and thirteenth centuries the soke was still a characteristic feature of the local organization of the Danelaw shires.

Lastly, reference must here be made to the type of soke extending into many different vills, and over many distinct sets of common fields—the manor with satellitic berewicks. This type attains its fullest development in the royal manors of the Peak of Derbyshire; it is represented in the ancient estate held by the Archbishop of York at Southwell in Nottinghamshire; it is rarely found in Lincolnshire; and in Yorkshire, although the estate of a great man will frequently be the centre of a large number of scattered berewicks, it will commonly receive the soke of an even greater number of independent tenements also. The organization of the individual

4 Inquisitiones post mortem, 52 Henry III.
5 In an Inquisition of uncertain date under Henry III tenants in Leverton, Saundby, North Woodhouse, Clarborough Wiseton, Fenton, 'Sudbeck', and Little Welham are represented as owing talliage, and suit to Oswardbeck court.
6 A fine example of this type of estate is presented by the royal manor of Northallerton: 'In Alvertune sunt ad geldum xliii carucatae. . . Huic
berewick must have varied greatly according as it constituted a vill of itself or merely formed part, perhaps a very insignificant part, of some villar group. We may not even assume that the employment of the term berewick in all cases implies that the holding to which it is applied possessed any agricultural organization distinct from that of the chief manor to which it belonged. Where a manor straggled over the lands of two or more adjacent vills the whole group may very well have been worked as a single agricultural estate, and the introduction of the term berewick into the Survey may in such cases be only intended to emphasize the fact that the lands of the manor extended beyond the limits of the vill in which the chief messuage lay. Also, as we have seen, there is evidence that the term berewick was actually employed to denote a detached piece of inland—a use carrying no agricultural connotation at all. But these qualifications need not prevent our recognizing this as a type distinct from those other forms of manorial association which we have been considering; and the manor with dependent berewicks is undoubtedly an institution of high antiquity in the Danelaw as elsewhere.

M appendent xi berewitae, Bretebi [Bretby], Smidetune [Smeaton], Sourebi [Sowerby], “Smitune”, Kirkebi [Kirkby], Corkeholme [Cockholme], Landemot [Landmorth], Bergebi [Borrowby], Gristorentun [Graystone], Romundebi [Romanby], Yaforde [Yafforth]. . . Ad hoc manerium pertinent soca harum terrarum, Neuhsaue [Newsham], Westhuse [ ], Mannebi [Maunby], Werlegesbi [Warlayby], Einderebi [Anderby], Yaford [Yafforth], Leisenchi [ ], Digneshale [ ], Runhutne [Rounton], Iribi [Irby], Haressare [Harlesy], Sighestun [Sigston], Colebi [Coleby], Timbelbi [Thimbleby], Leche [Leake], Chenneton [ ], Ravenestorp [Raventhalpe], Torentun [Thornton], Croxebi [Crosby], Otrinctun [Otterington], Romundebi [Romanby], Brunton [Brompton], Chelvintun [Kilvington], Chenevetun [Knayton].

1 For example, the common fields of the Nottinghamshire vills of Kilvington and Alverton can be shown to have been adjacent, with at most a headland between them. It is therefore natural that Colegrim’s manor on fo. 291 b should simply be described as lying ‘in Chelvinctune et Alverton’, and it is not probable that the Alverton portion of the estate was organized as a separate berewick.

2 That strict consistency in denoting berewicks as such was not observed by the scribes is shown by the duplicate entries relating to Overton with Stretton, Rutland. In one entry the word Ber(ewica) is interlined above ‘Stratone’, in the other this distinction is ignored. See V. C. H. Rutland, i. 130.

3 The word berewick does not occur in any early land-books relating to the northern Danelaw. Its first appearance would seem to be in the
In the attempt to carry the study of these manorial types into the period which lies behind the Norman Conquest, we are at once confronted by the fewness and the inferior quality of the texts which relate to this part of England. No land-book relating to any part of the true Danelaw has been preserved in an original manuscript; excluding certain obvious fabrications, mostly perpetrated in the interest of the abbeys of Crowland and Peterborough, the earliest charter available for our purpose is only dated 834, and nearly a century passes before we obtain another relevant document. The total number of such documents, it may be admitted, is somewhat greater than might at first sight be supposed; for in three particular cases the faulty identification of the estates conveyed has referred land-books of Derbyshire, Leicestershire, and Yorkshire origin to Staffordshire, Worcestershire, and Durham respectively; but it is at best with but a scanty collection of texts that we have to deal. To this we must add that the sources from which the greater number of these texts are derived are not of such a nature as to inspire confidence. The Liber Albus of York, from which we obtain four important documents, is a late compilation; the English of the boundaries transcribed in it is so corrupt as to be almost unintelligible; and the charters themselves present grave difficulties of chronology and style. The latter become still more serious with reference to the Hengwrt manuscript, a cartulary compiled in the thirteenth century and apparently in the interest of the abbey of Burton-on-Trent, from which nine charters can be derived. 

Medeshamstede Memoranda (C.S. 1128) 'Medeshamstede & ta berewican þa þar to heren, & Anlafestun & þam berewican þar to' (sic). In the spurious memorandum entered in the Laud MS. of the Chronicle under 963 'thorp' is used as equivalent to berewick, 'Medeshamstede . . . & ealle þa þorpes þe þerto lin, þ is Astfeld & Dodesthorp [Dogs thorpe] & Ege [Eye] & Pastun [Paston].'

1 This document (CS. 414) is merely a grant of land at Wirksworth, Derbyshire, by Cynewaru, Abbess of Repton, in return for a rent of lead payable to Christ Church, Canterbury. It is derived from the late thirteenth-century Christ Church cartulary, the text of which cannot implicitly be trusted, but the present deed seems genuine.

2 C.S. 884, 1283, 1113.

3 Canon Dixon, in his Fasti Eboracenses, 209, note y, remarks that the compiler of the Liber Albus 'confesses his inability to decipher the Saxon charters which he professes to give'.

This document appears to be a historical or legal text discussing the study of manorial types and the preservation of documents related to the Danelaw. It highlights the challenges in studying these texts, such as the difficulty in deciphering the language and the corruption of the documents. The emphasis is on the scarcity and quality of the available manuscripts, particularly the Liber Albus, and the difficulties in assembling a coherent understanding of the period.
cited with reference to the Danelaw.\textsuperscript{1} Composed in flamboyant and alliterative Latin,\textsuperscript{2} these documents form a class apart from most contemporary texts, and their value for our purpose is seriously impaired by the omission of all boundaries from the manuscript.\textsuperscript{3} The Hengwrt texts must perforce be used, but we cannot ignore the diplomatic suspicions to which their character gives rise.

Their peculiar value for us consists in the fact that they throw a faint light upon the early history of what is perhaps the most remarkable group of estates in the whole Danelaw—the ancient demesne of the Peak of Derbyshire. The geographical features of this district, the abrupt alternations of hill and dale, the narrow valleys and wide expanses of moor, admirably fitted for pasture, but ill-suited for cultivation as arable, produced a type of estate quite dissimilar from anything found elsewhere in the Danelaw shires. In this quarter, scattered unevenly over the wide district which extends transversely from the Dove at Ashbourne to the Yorkshire border,

\textsuperscript{1} These charters were unknown to Kemble; those prior to 975 have been printed by Birch in the Cartularium Saxonicum. But in the Appendix to the Second Report Hist. MSS. Com. (p. 105) a list is given of twelve more documents dating between 984 and 1048, some of which relate to the Danelaw. Land, for instance, is granted in the vills of Ash, Alfreton, Mickleover, and Eggington in Derbyshire. It is to be hoped that these charters will before long be published.

\textsuperscript{2} For the unusual nature of the royal style in a number of these charters see Asser, ed. Stevenson, 148, note 2.

\textsuperscript{3} The general impossibility of any successful identification of the estates conveyed by charters which contain no boundaries is most remarkably illustrated by the case of C. S. 978, a document from the Hengwrt series. A tenth-century copy of this charter is preserved, including the boundaries, which are omitted in the cartulary text. The document represents a grant by King Eadwig to a certain thegn, his namesake, of eight mansae at ‘Brantestun’, and the known connexion between the Hengwrt MS. and Burton Abbey would seem to afford conclusive proof that ‘Brantestun’ is identical with the Staffordshire village of Branton, three miles from Burton, which belonged to the abbey in the eleventh century. This identification, however, is finally disproved by a clause in the boundaries which reads ‘of ham cumbe on geriht in on limenan, adun andlang streames dë hit cymë on wiliaby\textsuperscript{4}’ (sic). The *Limine is the Warwickshire river Leam, on which stands the village of Willoughby near Daventry, represented by the ‘wiliaby\textsuperscript{5}’ (< Wiliabyg) of the text, and the land conveyed evidently lay in the adjacent village of Braunston just across the Northamptonshire border. With this example before us we shall hesitate before we identify the Hwitunton of C. S. 642, for instance, with Whittington near Lichfield rather than with Whittington near Chesterfield.
King Edward in 1066 had possessed eight manors, each comprising a group of berewicks varying in number from three to twelve, but including no recorded sokeland. For the purpose of making a yearly render to the king, a render presented in silver, honey, and lead, these manors were divided into two groups; and it is highly probable that each group was treated as a separate unit in the assessment to the geld. To the first there belonged the five manors of Darley, 'Mestesford' (Matlock Bridge), Wirksworth, Ashbourne, and Parwich; bearing with their 25 berewicks an aggregate assessment of 54 carucates, and containing a population of 89 villeins and 56 bordars. The second group extended northwards in continuation of the first, but probably lay in another wapentake; it comprised three estates, centring in the vills of Bakewell, Ashford, and Hope, rated at 50 carucates, including 27 berewicks, and supporting at the date of the survey 81 villeins and 13 bordars. Each group had sustained some wastage in the years which preceded the holding of the great Inquest; but when all allowance has been made on this score, the sparseness of the population scattered over this wide area, and the small amount of arable land included within it, clearly result in the first instance from the conformation of the ground.

Now in the case of this highly exceptional estate it is very probable that the word berewick really bore its primary agricultural signification in 1086. The twelve satellitic hamlets annexed to Ashford, for example, seem individually too small for an independent existence; their names in general, though no doubt compatible with, do not themselves suggest an original settlement on the lines of the normal village com-

---

1 The manor of Darley adjoins the manor of Bakewell. The rubrication of the Derbyshire survey is very defective, but Darley is explicitly stated to be in Hammestation wapentake, and it is probable that Bakewell and the other northern manors lay in the wapentake afterwards known as that of the High Peak, which is not mentioned in Domesday. For the estate as a whole cf. V. C. H. Derby, i. 295-7, 330-33.

2 It may be noted that at the middle of the twelfth century the OE. hiorda wic retained its original meaning in the Peak. In the foundation charter of Bredon Priory (Leicester) the Earl of Nottingham, that is of Nottingham with Derby, grants unam herdewicam in Hethcote juxta Hertedona [Hartington] in Pecco (Mon. Ang. vi. 97).
TYPES OF MANORIAL STRUCTURE [sec. ii

munity¹; and they are most naturally understood as a collection of scattered but dependent farmsteads, playing a part accessory to the agricultural activities of the chief manor. The arrangement, in fact, would seem to have resulted in the first instance from the configuration of the ground; and it thus becomes antecedently probable that these manors, as described in Domesday, represent agricultural groups of some considerable antiquity. The evidence of the Hengwrt land-books, which carry the history of these manors back to the very beginning of the tenth century, is very definitely in favour of such a conclusion.

The tale begins with a land-book of 926,² the authenticity of which is proved by the recurrence of its formulas in another charter of the same date, derived from the unrelated cartulary of the Berkshire monastery of Abingdon.³ In this document Æthelstan confirms to the fidelis Uhtred 60 manentes at Hope and Ashford, which, we are told, he had bought from the heathen for twenty pounds of gold and silver, at the command of King Edward and ealdorman Æthelred, cum ceteris comitibus et ministris. In the parallel Abingdon document Æthelstan’s confirmation relates to lands in the extreme west of Bedfordshire, bought by the thegn Ealdred, also ‘from the heathen’, for ten pounds. These transactions cannot well be later than 910, the most probable date for the death of ealdorman Æthelred,⁴ and they are of remarkable importance as showing that Edward the Elder, before attempting the military reduction of the Danelaw, had formed the plan of compelling thegns under his own allegiance to settle in districts still in the occupation of the Northern here. The policy indicated by these texts has, it would seem, been ignored

¹ The one exception is Taddington (D. B. Tadintune < OE. *at Tadan tīn). Even here, however, the original tīn may very well have been an isolated homestead.
² C.S. 658.
³ Ibid. 659.
⁴ It would be a plausible suggestion that the Abingdon grant was made at the time of the treaty of Ytingaford, assigned by the Parker MS. of the Chronicle to the year 906, for the latter place was situated in the immediate neighbourhood of Linslade, Buckinghamshire (C. S. 1189), barely five miles from the land conveyed by the present charter, which lay in the vills of Chalgrave and Tebworth near Watling Street in Bedfordshire.
up to the present; but for our immediate purpose it is the
bearing of the Derbyshire charter upon the condition of the
estates at Hope and Ashford which most deserves attention.
The land of sixty *manentes*, in the wild region drained by
the Wye and the Noe, must have covered a great expanse
of country, a territory much wider than would belong to any
couple of normal vills in this region. Most unfortunately, the
omission of the usual statement of boundaries from the existing
text of the charters makes it impossible for us to define the
limits of the area conveyed; but we may reasonably infer that
already before 910 Ashford and Hope were the administrative
centres of groups of dependent hamlets, such as are revealed
in the Domesday description of those manors.

The ancient association of the three royal manors of the High
Peak is definitely made probable by the fact that in 949
Bakewell, the remaining estate, was granted by Eadred, with
a wild florescence of unnecessary verbiage, to Uhtred, *miles et
dux*.¹ The significance of this grant has hitherto been ob-
scured by the impossible identification of the land conveyed
with the Staffordshire hamlets of ‘Bucknall cum Bagnall’,²
near Stoke-on-Trent. But the Badecanwelle of the charter
undoubtedly represents the Badecan wiellon of the Parker M.S.
of the Chronicle, the Badequella of Domesday, the modern
Bakewell; and in the grantee we may fairly recognize the
Uhtred of Ashford and Hope, now raised to the dignity of an
ealdorman. We have no means of estimating the period
during which Uhtred or his descendants remained in pos-
session of these estates, nor yet can we determine the date
at which they passed into the king’s hands; but the fact that
already before 950 they were together subject to the same
lord is itself a matter of some significance.

With regard to the southern portion of the Confessor’s
great Derbyshire estate—the manors between the Dove and

¹ C.S. 884.
² Bucknall derives from an OE. *Bucan healh* or *Bucan holt*; Bagnall, from *Bacgan healh* or *Bacgan holt*. See the early forms of these
names in Duignan, Staffordshire Place-names, 9 and 27. None of these
forms could possibly be derived from the personal name Badeca, com-
pounded in the Badecanwelle of the text and in the early forms of
Bakewell.
the Derwent—our unique pre-Conquest information is contained in a single land-book, which tells us little. In 966, forty years after the Ashford confirmation, Eadgar granted to the thegn Ælfhelm ten mansae, 'in eo loco qui Anglica relacione Peuerwich appellatur.' 1 'Peuerwich' is unidentified in the Cartularium Saxonicum, but it is clearly identical with the Peurewich of Domesday, 2 the modern village of Parwich in west Derbyshire. In 1066 Parwich was the head of a manor comprising the three berewicks of Alsop-le-Dale, Cold Eaton, and Hanson Grange; but the whole estate was then rated at four carucates only; and we thus obtain a remarkable discrepancy between the number of agrarian units assigned to an estate in the tenth century and the amount of its Domesday assessment. The significance of this and of other similar discrepancies must be reserved for separate discussion 3; the only immediate importance of the Parwich charter is in the fact that it in no way militates against the belief that in the middle of the tenth century the royal demesne of the Peak was already organized on the lines which obtained in King Edward's day.

The existence of this vast but coherent domain as an ancient possession of the crown is a geographical fact of some historical importance. It has accidentally happened that in a remote part of the Danelaw a royal estate which, as described in Domesday, bears a strong superficial resemblance to the demesne of the Peak 4 has actually come to affect the modern map of England. In the heart of what is now the shire of Rutland, King William in 1086 possessed the three manors of Oakham, Hambledon, and Ridlington; which with their dependent berewicks constituted the separate wapentake of Martinsley. The names of these berewicks are not recorded; 5 but it is clear that taken individually they were much larger, and more nearly autonomous in agricultural

1 C. S. 1175.
2 fo. 272 b.
3 See below, pp. 87-9.
4 The phrase 'dominium de Pecco' was used in the twelfth century to describe the lands in question. V. C. H. Derby, i. 297.
5 To Oakham five berewicks were appendant; to Hambledon and Ridlington, seven each. There is evidence which suggests that Uppingham, Wardley, and Belton were included among the berewicks of Ridlington. V. C. H. Rutland, i. 133.
matters, than were the dependent hamlets of Bakewell or Wirksworth. Regarded severally, each berewick of Oakham or Hambledon would seem to have been a fully developed vill, of which the land, for the purposes of the Survey, was considered to belong to the king in demesne; while the inhabitants paid their rents and dues at the chief manor, and doubtless performed certain agricultural duties under the direction of its bailiff. We can speculate but little purpose about the reasons owing to which the king became possessed of so large and compact an estate in so central a part of the country; but here, too, the local arrangement displayed by Domesday is probably of long standing. We know, at least, that Edward the Confessor had bestowed Rutland upon his wife Edith; we are told by a late but respectable authority that the same estate had earlier been given by Æthelred II to his wife Emma; and we may infer from the same source that it had been granted by Edgar to his second wife, Ælfthryth. The practice was continued after the Conquest; and I have elsewhere argued that it was the custom of regarding Rutland as the normal dowry of successive queens which separated the district from the adjacent shires, and thus created the modern county. Had these Derbyshire manors which we have just considered been chosen for the purpose, a modern shire of the Peak, with its county town at Bakewell, might quite conceivably have resulted from the grant.

Among all the five shires comprising the district which is the subject of this essay, there is not one of which the early history is involved in such utter obscurity as that which attends the condition, before the Conquest, of the county of

1 The statement that part of Empingham lay 'in soca regis de Rote-land', and later references to 'Rutland Soken' and Oakham Soke, show that these berewicks contained a considerable area of sokeland. They seem, in fact, comparable with the berewicks of Laneham, Notts., in which also much sokeland was included. See above, p. 12.

2 V. C. H. Rutland, i. 185-6. Gaimar, from whom we obtain the information connecting Emma with Rutland, also asserts that the district had formerly belonged to 'Elstruet', by which name he means Ælfthryth, second wife of King Edgar. (Compare OE. Chron. D text, sub anno 965.) As this lady was daughter of Ordgar, Ealdorman of Devon, the Rutland estate cannot well have come to her by inheritance, and it is only a reasonable inference that it was granted to her upon her marriage to the king.
Leicester. It therefore may be well to refer in passing to the solitary land-book which primarily relates to land within this shire; more particularly as the document in question, in itself of no special importance, has been referred by a mistaken identification to the distant county of Worcester. In 966 Eadgar granted to Bishop Æthelwold 13 cassati at Breedon in Leicestershire, where, it would seem, there existed, or had recently been created, a religious house which was to enjoy the property in the future. We are then told:—

'est autem predicta tellus hiis locis comperta; iii videlicet cassati æt Æbredone (sic), iii æt Wifeles thorpe, iii æt Ætheredesdune, iii scilicet æt Digtheswyrthe.' The site of Ætheredesdune is no longer known, Wifelesthorpe may be identified with the hamlet of Wilson on the Derbyshire border; Digtheswyrthe is undoubtedly the modern village of Diseworth. It does not appear from the record that these properties were united otherwise than by their common subordination to the uses of the church of Bredon; and the charter is only cited here for its bearing upon the local geography of Leicestershire at a period when that subject is in general impenetrably obscure.

More important, because more definite, evidence as to the early history of the discrete manerium is afforded in relation to the great estate which the Archbishop of York possessed in the centre of the county of Nottingham. Immediately to the north of the Trent, and extending for some eight miles in a north-westerly direction, a compact group of a dozen vills constituted in 1066 the archiepiscopal manor of Southwell. At the date in question eleven of these vills, which are not named in Domesday, were organized as berewicks of the

1 C.S. 1283.
2 Wilson is represented by Wivelston in the twelfth century (Mon. Ang. vi. 97).
3 It is difficult to trace this estate in Domesday, for the only entry which relates to any portion of it merely assigns 3 carucates in Diseworth to William Loveth. The Domesday account of Diseworth is, however, defective, and it is likely that the whole of the land conveyed by the present charter was included within Henry de Ferrer's manor of Tonge, the pre-Conquest owner of which is not named (V. C. H. Leicester, i. 319, 349). Breedon and Wilson certainly belonged to the Ferrers' family in the twelfth century.
chief manor; and the whole group was rated at $22\frac{1}{2}$ carucates, a sum representing exactly 20 of those nine-bovate units upon which there is reason to believe that the assessment of this part of Nottinghamshire was based.\(^1\) In or about 956 this estate, as 20 **mansae**, had been granted by King Eadwig to Archbishop Oscytel of York; and the relevant land-book is preserved in a corrupt form in the Liber Albus of the latter church. This document, which certainly seems to be founded upon a tenth-century original, presents certain unusual features, chief among which is the insertion of a paragraph after the statement of boundaries intended to define more exactly the nature of the archbishop's interest in the property. 'These are the **tuins** that belong to Southwell with sake and soke; Farnsfield, Kirklington, Normanton, Upton, Morton, Fiskerton, Gibsmere, Bleasby, Goverton, Halloughton, Halam. In Farnsfield two manslots belong to Southwell; in Halam are sixty acres and three manslots; in Normanton, every third acre; in Fiskerton, the two parts (**dales**) and four manslots out of all the land.' It would not be in place here to comment on the appearance of the manlot in this text,\(^2\) except to remark that the term is such as no twelfth-century forger would have been likely to invent; but this point is itself of importance, for the present document is the first charter of reasonable authenticity that makes an explicit reference to the grantee's possession of soke over the land conveyed. The importance of this fact

\(^1\) C.S. 1029. For the assessment of 1086 compare V. C. H. Nottinghamham, i. 209-10.

\(^2\) Compare Vinogradoff, English Society in the Eleventh Century, 281.

A contemporary reference to **gedalland** in the west-midland shire occurs in C.S. 1181, by which Bishop Oswald of Worcester leases to his thegn Withhelm 2 hides at Clifford-Chambers, Gloucestershire, 'oper healf hid ge dal landes, & healf hid on hære ege.' The 1½ hides of gedalland were clearly distributed in scattered strips in contrast to the compact half-hide on the island. Clifford-Chambers lies on the left bank of the Stour. Another Gloucestershire charter, erroneously referred in the Cartularium to Hampshire (C.S. 764), supplies us with an earlier reference to the system of **gedales**. The document refers to land at Wotton-under-Edge, and the statement of boundaries ends by including within the estate Oslanwyrth [Ozleworth] and all that belongs to it, and the fourth **dæl** at Byneswell [---]. The document comes from the fraudulent Codex Wintoniensis, but seems genuine; and the reference to the ge-dales would be still more remarkable if it were founded upon the agrarian arrangements of the mid-twelfth century.
as bearing on the nature of earlier grants which are silent on this point is very considerable, but it should further be noted that at Southwell we seem for once to obtain a clue to the real constitution of these large and ancient estates at a date more than a century behind the Domesday Inquest. The clause which we are considering is most naturally understood as meaning that while the archbishop would possess sake and soke over the whole estate, parts of it lay outside the range of his immediate ownership. The details about the archbishop's land in Farnsfield, Halam, Fiskerton, and Normanton surely imply that the soil of the remainder of these vills had not passed to the new lord; a conclusion which, it may be noted, is well borne out by the evidence of Domesday. It would seem, in fact, that we are reading of an estate which would already, in its main features, answer to the common formulas of the Danelaw Domesday: the central vill, the dependent tenements, some owned outright by the lord, others only connected with the capital messuage by the fact that they carry a responsibility for suit and service to be rendered there. For it can hardly be otherwise than that, in those parts of Halam, Farnsfield, Fiskerton, and Normanton which appear to be excepted from the sphere of the archbishop's ownership, we have a form of tenement which would correspond, at least in origin, to the sokeland of 1086.

If it stood alone the Southwell charter, a late copy of a difficult text, might perhaps be regarded with some suspicion. But it fortunately happens that, in regard to the clause implying the extension of sake and soke over the property, the Southwell evidence is supported by another document of almost contemporary origin, but of quite independent provenance. In 959 Edgar, as king of Mercia, 'necnon et aliarum gentium in circuitu persistentium', granted to the matron Quen two cassates at Howden and 'Ealdredrege'. In the document by which this grant is made a separate set of

1 In 1086 Walter de Aincurt possessed lands in Fiskerton, Morton, and Farnsfield; Gilbert de Gand, lands in Kirklington and Normanton; and Ralf fitz Hubert, lands in Gibsmere and Morton, of which the soke belonged to Southwell.
2 C. S. 1052.
boundaries is assigned to Howden and to 'Ealdredrege'; but
between the two there is inserted the clause 'these are the
lands which belong to Howden with sake and with soke',
followed by a list of seven vills, each of which can be identified
in the angle formed by the Yorkshire Ouse and Derwent
of which Howden is the natural centre.\(^1\) In 1086\(^2\) all these
vills were still appurtenant to the manor of Howden; though
it may be that the distinction of tenure which we have noted
in the case of Southwell prevailed here also. In any case,
we obtain valuable confirmation of the Southwell evidence
proving the possession of jurisdictional powers by the lord of
a newly granted estate at a date considerably earlier than the
conveyance of any powers of the kind in the operative words
of a genuine instrument; and we may note it as significant
that in both instances the existence of the lord's justice is
revealed to us in the vernacular phrase sake and soke.\(^3\)

King Eadwig's grant of Southwell was only one of a series
of similar gifts through which the patrimony of the see of
York was recruited in the third quarter of the tenth century
after the fall of the Danish kingdom of Northumbria. Between
956 and the death of Archbishop Oswald in 992 the northern
archbishopric had become possessed of the important manors
of Sutton in Nottinghamshire, Sherburn in Elmet, and New-
bold near Pocklington in Yorkshire.\(^4\) It is only in regard to

---

\(^{1}\) Cnyllingtún [Knedlington], Beornhyll [Barnhill], Cafeld [Cavil],
Thorpe [Thorpe], Hythe [Hythe], Eastringatún [Eastrington], Belleby
[Belby], Celpene [Kilpin].

\(^{2}\) Howden is one of those manors, characteristic of Yorkshire, to which
much territory belonged both in the form of berewicks and as sokeland.

\(^{3}\) The references to sake and soke in the Southwell and Howden land-
books make it necessary slightly to modify the argument of Maitland in
Dom. Bk. and Beyond, 258-67. It is, no doubt, true that express grants
of jurisdiction became steadily more frequent as the writ-form gained
popularity at the expense of the ancient diploma; but the land-books
which have just been considered show that the jurisdictional formula
could be introduced into a solemn charter if need arose. The explicit
reference to sake and soke at Southwell and Howden is apparently called
forth by the fact that these estates were each scattered over a wide area:
the was clearly felt necessary to explain that the new lord would possess
rights of justice over the whole of the respective properties. It may be
added that the existence of these charters of 956-9 makes the authenticity
of the Altitonantis diploma of 964 a matter of less importance than
before.

\(^{4}\) C. S. 1044 [958], 1112 [963], 1113 [963].
the second of these estates that we obtain information which is of importance for our present purpose, but the evidence supplied in the case of Sherburn in Elmet well bears out the conclusions suggested by the charters relating to Southwell and Howden. In 1066 Sherburn with its unspecified bere-wicks was rated at 96 carucates, a sum which at once suggests that, contrary to the usual practice in such cases, the whole estate was regarded as a fiscal unit upon the familiar twelve-carucate basis. In 963 King Edgar gave to a certain Aslac 20 cassates at Sherburn; but the statement of boundaries incorporated in the charter shows that the land in question formed only a portion of the whole estate conveyed. We are first given the boundaries of 20 hides of 'inland' at Sherburn, a term which in this case probably refers exclusively to the central manor; and then there follows a specification of the lands dependent on the latter which deserves quotation 1:—

'half a hide in "Hibaldestofte", and one hide in Fryston, (and) in Hillam two oxgangs, and in Lumby two oxgangs, and one and a half hides in Milford and in Steeton, and in Micklefield two hides of land, and all "Luttringham" except one hide, and one and a half hides in Church Fenton, and one and a half hides in Cawood.' The text of the charter is corrupt, but the sense of the present passage is sufficiently plain.

Now the chief fact that arrests attention here is the smallness of the several parcels of dependent territory. The bere-wicks of Sherburn are by no means entire vills, they are

---

1 The arrangement of the property at Sherburn, and more particularly the meaning in this case of the term *inland*, are well illustrated by the formulas employed in C. S. 208, a charter purporting to have been granted by Offa in 772, and conveying land at Bexhill, Sussex. The statement of boundaries occupies two clauses: the first headed 'This sind þæra viii hida land gemera þær inlændes into bæxwarena lande'; the second 'Thonne syndon þæ gavolland þæs utlændes into bexlea, in hiis locis qui appellantur hiis nominibus. On berna hornan iii hida, on wyrtlesham i etc.' This charter (from Lambeth MS. 1212) cannot be cited for the local organization of the eighth century; but it is fair evidence for a later practice by which the terms *inland* and *utland* were employed in contrast; the former to indicate the home portion of the estate, the latter to denote the outlying properties belonging to it. The former no doubt expresses the nature of the Sherburn inland of 963, and the scattered parcels of land which belonged there are clearly equivalent to the Bexhill *utland*. 
disconnected hides and oxgangs scattered over an area more than six miles square. There is evidence, as will shortly be seen, which shows that a loss of territory had recently been sustained by the estate; but the recorded details of the loss are quite insufficient to affect the essential character of the Sherburn berewicks. We are, in fact, dealing here with a type of estates different, so far as our knowledge goes, from the types displayed either in the royal manors of the Peak of Derbyshire or in the king's demesne of Rutland; a type, moreover, to which it would not be difficult to cite parallel instances from Domesday. But perhaps the best commentary upon the local arrangements which obtained at Sherburn is afforded by a Cambridgeshire estate which King Edgar in 970 conferred upon the monastery of Ely.¹ The charter by which this grant was made bestows upon St. Æthelthryth ‘aet Lintune’, a lost vill now represented by Linden End near Aldreth; and instead of boundaries the limits of the estate are defined by the clause ‘This sind ða land into Lintune... þæt þonne ðið hid mælum & æcer mælum on Wilburhtune [Wilburton] & on hædan ham [Haddenham] & on hille [ ] & on Wichamme [Witcham]’, a clause explained by the statement in the body of the document that ‘ad hanc autem tellurem multa jugera ex diversis circum-jacentibus villis pertinent perpetua insignita libertate’. The berewicks of Sherburn no less clearly lay ‘hide-meal and acre-meal’ in the adjacent vills, among the strips held by independent landholders; although the subsequent development of the Sherburn and Linden estates proceeded on different lines. It is significant of the more rapid manorialization of the midlands, that in 1086 Wilburton and Witcham were organized as separate maneria, while the Sherburn estate had maintained its integrity, and indeed by the date of Domesday had become one of the largest manors in South Yorkshire. As to its condition in the tenth century, one most important fact, ignored by the compiler of the charter of 963, is happily recorded incidentally in another text; the lord of Sherburn,

¹ C. S. 1268. The ‘Lintune’ of this charter represents the ‘Lindone’ of the Cambridgeshire Domesday; it is wrongly identified by Birch with Linton in the extreme south of the county.
whether the king or another, had formerly possessed soke over the estate, although from whatever cause half the soke had recently been withdrawn. It is very clear that we cannot argue from the silence of our tenth-century texts with respect to the existence of jurisdictional franchises at this time; and we may raise the question, in passing, whether the perpetua insignita libertas which distinguished the Linden estate does not indicate the existence of that most important of all immunities, the immunity which gave scope for the development of a seignorial court. Nor should we leave the Sherburn charter without a reference to the clear proof which it affords that the hide was still regarded as the agricultural unit in South Yorkshire in the third quarter of the tenth century.

Extensive as was the appendant territory of Sherburn in Elmet in 963, it merely formed part of a larger estate which had centred in that vill in early times. For our knowledge of this fact, and for other valuable information respecting the early local history of Yorkshire, we are indebted to the preservation of a fragmentary memorandum compiled at the instance of that very efficient man of affairs, Archbishop Oswald, and describing the condition of the estates of his see north of the Humber. This document, which has at present hardly received the attention that it merits, falls into two parts, the first, setting out the lands which had been withdrawn from the three great estates of Sherburn, Otley, and Ripon; the second, recording the territorial acquisitions in 'Northumberland' of Oswald's predecessor, Archbishop Oscytel. The record bears no date, but as it relates that the archbishop had obtained a grant of the lands in question from King Edgar in person, it may probably be placed within a short time of Oswald's accession in 971-2.

From the standpoint of general history this document deserves particular study as affording evidence in relation to a subject where evidence is sorely needed—the position of the northern archbishopric under the rule of the Scandinavian Kings of York. We might in any case infer that the new lords of Northumbria would show scant respect to the boundaries

1 C. S. 1278-9. The existing text is corrupt.
of the ancient estates of the see; it is the present document which alone gives details in regard to this matter. But for our present purpose the evidence supplied by this document with relation to the general character of the Northumbrian estates at issue is more important; and this evidence is conclusive. The lands which had been taken from Otley covered part at least of thirteen vills, distributed over an area of ten miles along Wharfedale, and extending widely over the moors on each side of the valley. Of the means by which the archbishop, in the first instance, became possessed of Otley, we know nothing; but the tenth-century estate of Ripon undoubtedly descends from that 'monasterium triginta familiarum' which Alchfrid of Northumbria gave to Wilfrid in or about the year 661. The loss sustained at Ripon amounted to seven distinct properties, of which one, Helperby on the left bank of the Swale, had been recovered by Archbishop Oscytel in a remarkable manner; two brothers, we are told, had possessed one wife, and had therefore forfeited their land to the archbishop. But the noteworthy fact which we learn about Helperby is that at the time of its recovery the estate had come to include dependent territory in a number of scattered vills—'into Heolperby hyrð Mytun twa dæl, et Wibustan socon et þurulfestun et toletun et þorp'. If then, as we must infer from our text, Helperby, or an earlier village on the same site, had in ancient times been annexed to Ripon, we are driven to the conclusion that at some date subsequent to the Danish conquest of York the site had been occupied by a settler who had not only withdrawn his land from its dependence on Ripon, but had also added to it scattered properties distributed somewhat widely over the neighbouring country, properties which in one case were subject to the lord's soke. Beyond this we cannot go; but if our text may be trusted, we are certainly dealing at Helperby with a discrete estate existing in the days of the independent kingdom of York, in which the local organization familiar in the Dane-

1 Addingham in Wharfedale, the first of these estates, was still in the hands of the archbishop in 867, when Archbishop Wulfhere retired there at the time of the Danish occupation of York (Simeon of Durham, i. 225).

2 Bede, H. E. v. 19.
law of 1066—the central messuage, the dependent tenements, the sokeland—had already been developed.

The case of Sherburn in Elmet differs in some respects from the cases of Ripon and Otley. To the compiler of Oswald's memoranda all these estates alike were ancient possessions of the see of York, which had suffered encroachment during recent disorders. To such an explanation the preservation of the Sherburn land-book of 963 presents a superficial difficulty. The estate, without any reference to its past history, is granted de novo by King Edgar, not to the archbishop, but to the thegn Aslac. The only solution of this difficulty which presents itself is the supposition that Sherburn had in some way come into the king's hand, and that the king, in restoring it to the see of York, wished to make one of his thegns a partner in the good work; just as in the same year, when selling Newbald¹ to the archbishop, he conveyed the estate in the first instance to the Earl Gunner, with the customary reservation that the land was to be devoted to religious uses. Happily these details of conveyancing practice do not affect the authenticity of the highly important statement in the memorandum which asserts that half the soke that belonged to Sherburn had been withdrawn; nor do they concern the information which the memorandum and the charter together supply with respect to the outlying members of the estate. The essential fact in this connexion, the annexation of fractional parts of scattered vills to a central estate, is clear; and it carries the implication that whether or no the whole property were subject to the lord's soke, the lord was regarded as the owner of the soil. Already in the mid-tenth century the form of local organization which the compilers of Domesday were to describe under the name of the berewick had come into being.²

¹ In the Newbald charter (C.S. 1113) Gunner receives the land in question 'pro obsequio ejus devotissimo'. The real nature of the transaction is indicated by the statement in the Memorandum that Oscytel bought the land at Newbold from King Edgar with 120 mancuses 'of red gold'.

² The word itself has passed into local nomenclature under the form of Berwick or Barwick. That the connexion was still recognized at the date of the Survey is shown by the entry relating to Kippax, York (fo. 315) 'Huic manerio adjacet terra quae vocatur proprie Berewit [Barwick in Elmet]'.
Among the forces which made for manorial consolidation in the generations preceding the Norman Conquest an important place must assuredly be assigned to the pressure of the geld upon the rural population. The operation of this force in detail is hidden from us; but there is evidence enough to suggest that the king and his advisers have been from an early date regarding the lord as in the last resort responsible for the geld laid upon tenements within the scope of his local influence. Earlier in this essay it has been suggested that a main feature distinguishing the position of the sokeman within the manor was his responsibility for the geld due from the lands which he held; and the argument might well be pressed that it was the lord who acquitted the tenements of villeins and bordars, the unfree tenements of later times. It thus becomes important to inquire, so far as any inquiry is possible, into the question of the date at which the assessment of the Danelaw, as revealed in Domesday, takes its origin, and in regard to this matter the evidence of the early texts which have recently been considered is of some peculiar value.

In the west and south of England it is usually easy to demonstrate continuity between the *mansae* and *cassati* conveyed in extant land-books and the hidage of the relevant estates as recorded in Domesday. The assessment of such a county as Berkshire, for example, was clearly a matter of long standing in 1066. But the case is startlingly different when we investigate the figures recorded in the little group of land-books which have been preserved with reference to the shires dependent upon the Five Boroughs. There is no need to produce evidence to show that the men who distributed the assessment of Lincolnshire or Yorkshire among the several vills of these shires ended by imposing upon the normal vill in this region a duodecimal group of carucates bearing geld; the fact has already been demonstrated to the full. But it is scarcely realized as yet that the land-books which relate to the Danelaw reveal no trace of any such system. From the

---

1 Thus, to take a Berkshire example, in 942 King Eadmund sold an estate in Brimpton, estimated at 8 *mansae* (C.S. 802). In 1066 the vill was divided into two manors, rated respectively at $3\frac{1}{2}$ and $4\frac{1}{2}$ hides.
period before the year 975 there remain eleven documents which definitely specify the amount of land conveyed in each, and the figures are suggestive. The 10 manses granted at Eaton in Dovedale, the 5 granted at King's Newton, the 10 at Parwich, all in Derbyshire; the 20 manses of Southwell, the 10 cassates of Sutton in Nottinghamshire, the 20 hides of Sherburn in Elmet; are not only out of all correspondence with the Domesday assessments of these places, they rest upon a decimal basis of computation identical with that which obtained in Oxfordshire or Worcestershire.\(^1\) Regarded singly, these figures furnish a \textit{prima facie} case for the belief that the distribution of fiscal units in the Danelaw is at the least more recent than the year of King Edgar's death; they may well incline us to regard with some respect the vast numbers of hides assigned in the 'Tribal Hidage' to the men of the Peak, of Lindsey, and of Mercia.

This conclusion is supported in a remarkable manner by two unrelated facts. The appearance of the hide as the local agrarian unit at Sherburn in Elmet in 963 is a very positive objection to any theory which would assign a high antiquity to the Domesday assessment of the Danelaw. It may well be that in the oxiang of the Sherburn text we should recognize the native word represented by the familiar bovate of Domesday; but the carucate, as a legal term, has clearly not yet obtained currency in the north. Nor is it unimportant that the persistence of the hide can be shown at a date nearly forty years after the Sherburn grant in relation to two other of the Danelaw shires: the will of Wulfric Spot refers incidentally to hides at Awsworth in west Nottinghamshire and at Sharnford in south Leicestershire. And in the second place, there is the remarkable fact that in that collection of fiscal statistics known as the County Hidage—statistics agreeing too closely with the Domesday assessments of the shires to which they

\(^1\) The 60 \textit{mancules} at Hope and Ashford, the 30 \textit{cassati} of Newbald, might be explained as pointing indifferently to a decimal or duodecimal system. Estates of 30 hides, however, were known at an early date in the south (799–802, original), e.g. in C.S. 201 'terram xxx manentium in Middil Saexum'... terram totidem manentium, id est xxx, in Ciltinne, in loco ubi dicitur Wichama' [High Wycombe, Bucks].
refer to be referred to a date much beyond the opening of the eleventh century—the counties of York, Nottingham, Derby, Leicester, and Lincoln, the carucated shires of England, are omitted. Taken singly, these facts might be explained away; together they raise a very definite presumption that at the close of the tenth century the shire of York, the district dependent on the Five Boroughs, had not yet been brought under the operation of the fiscal system of the south and east.

It is impossible, through lack of evidence, to determine the date at which the change was made. The existence of Æthelred’s Wantage code suggests that that king was at least more interested in the internal affairs of the Danelaw than were any of his predecessors—sufficiently interested to legislate for the men of the Five Boroughs. But the reign of the redeless king is by no means the period to which we should be inclined to refer so great an administrative measure as the imposition of a uniform system of assessment upon a fourth part of England. And there remains one fact which suggests very strongly that the distribution of fiscal carucates over the Danelaw is at any rate later than the issue of Æthelred’s Wantage code. The Domesday assessment of the Danelaw was based upon a very remarkable system by which, where necessary, villas were grouped so as to form what were termed ‘hundreds’, each bearing a joint assessment of twelve carucates to the geld. That these hundreds were primarily created to provide for the punctual payment and exact local apportionment of the geld is very probable; but it is clear that they served other purposes as well. They were at least sufficiently organized to give a corporate opinion upon questions relating to the disputed ownership of land; they probably, in former times, fulfilled the functions of a local judicial assembly. Now in Æthelred’s Wantage code we are given a singular description

1 In Kesteven, where individual villas were larger than elsewhere, a single villa might well constitute a ‘hundred’ by itself after the manner of Potter Hanworth and Branston (fo. 461), or a double hundred as at Long Bennington (fo. 348).
2 This is strongly suggested by the uniformity of the assessment.
3 Fo. 370: ‘In Chisebi’ [Keisby Lincoln] habuit Offram iii bovatas terrae ad geldum... Hominis de punchedo dicunt socam jacere in Osgotebi [Osgodby].’
of the fines payable for the breach of the king's peace under different circumstances, which is very pertinent to the present question. Peace given in the general assembly (*gepincdon*) of the Five Boroughs is the most severely guarded; then comes the peace given in the wapentake; lastly, the peace given in *callhuse*; and it is difficult to believe, if a series of 'hundreds', such as are revealed by Domesday, already existed at the date of the Wantage code, that the peace given there should not be regarded as of greater moment than the peace given in the beerhouse. It is true that the date of the Wantage code is itself uncertain, and that the reign of *Æ*thelred II is very long; but the hide was still the agrarian unit in the Danelaw at the beginning of the eleventh century, and if a date for the assessment of the Danelaw may be suggested on grounds of general probability, then no other period so well fits the known circumstances as the accession of the foreign conqueror Cnut. But whatever conclusion may be reached in regard to this matter, it would seem clear that the men of the Danelaw until a late period were exempt from the fiscal burdens which pressed upon their neighbours to south and west; and it may well be that in this fact we should recognize one among the many causes which contributed to the general liberty which they enjoyed in 1066.

In conclusion, a passing reference should perhaps be made here to one grave problem which becomes increasingly pressing as we trace the history of the Danelaw *manercium* backwards through the tenth century; a problem which arises in

1 The geld of 1018 brought in, according to the Chronicle, £72,000; more than twice the amount obtained from any previous levy. But how far the figures recorded in regard to this matter by the Chronicle represent the truth is very doubtful.

2 In other words, it is probable the lands of the Danelaw shires were still numbered according to the system which underlay that ancient record the Tribal Hidage, a system devised in order to meet the elementary needs of a seventh or eighth-century king, but quite inappropriate to the severe burdens of taxation or military defence which lay upon the population of Wessex and the southern and western midlands in the tenth century. In the Tribal Hidage the men of Lindsey answer for 15,000 hides; in the eleventh century, upon calculation from the Lindsey Survey supplemented by Domesday, they were assessed at just 2,000 carucates. There is a superficial reduction here; but it is accompanied by the imposition of fiscal burdens of altogether disproportionate severity.
connexion with the local nomenclature of this district. In 1066 the vills of the Danelaw were free, to an extent perhaps without parallel elsewhere in England; they were unmansorialized, and in many cases would appear never to have known any lord of lower rank than king, earl, or bishop. The presumption is naturally strong that the liberty which they possessed in 1066 belonged to them from the beginning of their history; that the bys and thorpes of the Danelaw resulted from the settlement of groups of free-men; that the lord was in all cases an unoriginal element in the life of these communities; and that in many cases he had not come into being at all at the time when the Norman Conquest extended the manorial system over the unfeudalized east and north. This conception agrees well with the evidence supplied by Domes-day; it enables us to co-ordinate the agrarian customs of the Danelaw with those revealed by the remains of early Scandinavian law, and undoubtedly it contains a large measure of truth; but the place-names of the Trent basin raise a silent protest which has hitherto been too little regarded. Brooksby Thorganby, Gamston, Skegby, are names which will not permit us to deny a primitive superiority, of whatever origin or extent, to Broc, Thorgrim, Gamel, and Skegg. We may minimize the significance of the eponymous lord; we may refuse him the ownership of the village lands; we may believe that a village of free settlers coexisted from the beginning beside his dominant homestead; but we cannot explain him away; and it is probable that for a long time yet he will remain to complicate the earliest phase of the local history of the Danelaw. Here, at least, no explanation of his presence can be attempted; but it is well to remember that there comes a point at last at which the study of agrarian types touches the study of local nomenclature, and that the reconciliation of the personal element compounded in countless place-names with the general freedom which distinguished the Danelaw villages of 1066 is a task which must be undertaken in the future.

INTRODUCTORY

The typical villein of the manorial period fulfilled three sets of obligations: the first, imposed by the custom of the manor and enforced by the manorial court, consisted both of the rendering of services and the payment of rents to the lord of the manor; the second, political in origin, but influenced during the feudal period by manorial custom, consisted chiefly of the payment of rents to the king through his local officers, or to the lord of the manor, who, under the peculiar conditions of feudal society, was usually the holder of regalia obtained by franchise or usurpation; and the third, in origin non-manorial like the second, consisted of the payment of tithes and rents to the church.¹

Of obligations of the first kind, those resulting from manorial custom, the services, as distinguished from the rents, had a certain unity, evident to us in spite of the fact that there are several obscure places in their history. Custumals and accounts make it clear that they were, in the main, agricultural in character, and that they were the essential condition upon which the system of exploitation by means of the demesne rested. In customary rents, on the other hand, a like unity cannot be found. They were not necessarily part of one system; they represent various periods in the development of manorial life, and various aspects of villeinage, of the disabilities and privileges and occupations of the villein. To the understanding of some of them a study of the services to which they were in a measure complementary is indispensable; of others an explanation must be sought outside of domanial arrangements. Their composite character as exponents of different aspects of manorial conditions and development is

¹ See Vinogradoff, Villainage in England, pp. 288-95, for the fullest discussion of rents.
due also to the fact that those of the second kind, rents originally royal in character, had become, through the frequent interposition of the lord as the immediate or ultimate recipient of them, in a sense manorialized, and the relation of the villein to the king had therefore become inseparable from his relation to the lord of the manor. A similar process is probably visible in the church rents; they too were in part manorialized in cases where the lord of the manor was also a monastery or religious house. Yet although such processes of manorialization of rents had sometimes gone far, they were not complete; a margin of public responsibility and responsibility to the church remained.

The influence of manorial custom upon church and royal rents sometimes blurs the natural lines of division into the larger classes, and within the class of customary rents properly so called subdivisions are sometimes made uncertain and difficult by the disregarding of logical distinctions in manorial documents. It may well have happened that even by the thirteenth and fourteenth centuries a bailiff or surveyor would have found the explanation of the origin and nature of some of the older rents difficult; minute consuetudines lingered on, often as mere names, to furnish the excuse for the collection of trifling rents. Yet in spite of uncertainties of definition, several groups of customary rents seem to separate themselves, with more or less distinctness as the case may be, corresponding to the chief phases of the villein's condition and manner of life; and among royal and church rents also lines of division appear, although less clearly. Among customary rents proper may be included all those that had their origin in the relation existing between immediate lord and dependant in domanial days or in the earlier time, and that were regulated by custom and not by contract or special arrangement between the lord and the individual. This definition excludes the rents to which the term redditus assise is usually applied, the fixed rents, of whatever kind, agreed upon by the lord and the villein or freeholder for the holding of certain tenements, whether of assart land, demesne land, or land in the fields of the village, rents which, however originating, were
regulated not by the custom of the manor but by agreements depending upon the nature of the land and the advantage to the persons concerned. It should be stated, however, that the term *redditus assise* has sometimes a broader application, and in bailiffs' accounts is made to include also some of the variable and fluctuating rents, *redditus mutabiles*, which by the custom of the manor were placed *ad certum*, at a fixed annual sum. The desire for certainty regarding annual income, a certainty difficult to obtain where the sources of revenue were diverse and fluctuating, led to the extension of this practice of 'farming'—the requirement, that is to say, of a fixed annual sum or farm instead of an uncertain and variable sum—far down into the details of manorial economy. Exclusive, then, of rents which were the results of agreement, customary rents divide themselves into the following general classes, whose limits are not always very clearly marked. In one class are the rents best explained as survivals of an early, predomancial system of exploitation, by which the lord was supported directly by food supplies sent him by his dependent villagers, free or unfree in other respects; a system of purveyance on the part of the lord, which in the manorial period became obscured and in a measure obliterated by the imposition of the manor on earlier arrangements. In a second class are the rents which were chiefly commutations of occasional services, and were hence connected with the domanial system, forming the complement of the labour on the demesne. Thirdly, the rents paid in connexion with pastoral rights and liabilities and the holding of stock, with which may be grouped for convenience the rents paid for other holdings, houses, special bits of land, and privileges, must be considered; and, fourthly, the condition rents incident to the villein's servile status, or to the tenure of land in villeinage. In a fifth group are placed a number of miscellaneous payments concerning which too little is known to make it possible to classify them. In the rents which were not manorial but royal in origin a division seems apparent between rents paid originally as part of the public imposts and in aid of the necessary expenses of the kingdom in the maintenance of defence and the
administration of order, and the rents which were more directly connected with the holding of courts and judicial procedure. The rents to the church fall into still another group.

With regard to the incidence of these rents within the manor, the responsibility, that is to say, of various classes of tenants for their payment, it is clear from the definition of customary rents that the heaviest burden was necessarily borne by those tenants that held by a purely customary tenure, the typical custumarii, operarii, werkmen, villani, gavolmanni, or whatever may have been their name in different localities, whether of the more numerous class of virgaters and half virgaters, the greater operarii, or the smaller operarii, like cottars holding on a labour basis. Questions arise, however, regarding the distribution of manorial rents within even this limited group; some men of the vill were held to the payment of rents from which other men of the same vill, in other respects with similar obligations, were exempt. An evidence of the diversity of custom resulting from conditions not clear to us is found in the appearance within the manor of lands or tenements to which certain rents and services have become attached, so that the name of tenements is taken from the services or rents due from them. Thus, for example, in Kent are found averlonds, lands from which a special service of carting was due; wallondes, held by the service of a certain number of deiwercas in making a wall against the sea; honilonds, cheeselonds, hoplands, saltlands, maltlands, held by the payment of food rents. In Essex were serlonds and seracras, held probably by the service of carting manure or paying sharpeney; lodland, like averlond or perhaps like wallond; and on Ely manors bindinglond, land held by some

special service of binding grain. The hill lands in Norfolk and elsewhere suggest the presence of groups of villeins living high up on the downs and holding by services and customs on the whole more pastoral in character than the services of ordinary villeins, resembling, perhaps, those of the Welsh dairy farmers. Not only is it difficult to explain such variations in the incidence of rents upon customary tenants, it is also difficult to draw the lines around customary tenure. There were classes of men within the manor, above and below the typical *operarii* in point of general importance, whose obligation was, in the main, the payment of a money rent, corresponding roughly to the week-work of the ordinary villein, but who were bound also to render occasional services and to pay some of the rents usually regarded as customary. The *molmen* of the northern and eastern counties and Kent, for example, held land by the rendering of certain clearly customary services, *werkerthes*, *graserths*, *studewerk*, and the like, and paid the ordinary condition rents of the villein, but they did not perform week-work, and their heaviest duty was the payment of a money rent, probably a commutation of the week-work, at four terms in the year. With them may be

2 Eng. Hist. Rev., i. 734, ii. 103, 332; Vill. in Eng., pp. 183 sqq. Such tenants were classed generally among the *consuetudinarii* on Ely manors and in Kent. In Add. MS. 6159, f. 22, they pay bedrips, hens, and *unthield*; in Claud. C. xi, f. 55, they pay heriot, tallage, relief, ger-suma. Ibid., f. 233, they serve as reeves, beadles, or foresters; f. 247, their works are called *studewerks*. Yet in Ely they are distinguished in a measure from the ordinary *operarii*, and connected rather with the *censuarii*. In Bishop Hatfield’s Survey of Durham, p. 175, they are called *molmen sive firmarii*, and their predecessors appear in Domesday Book as *firmarii*; on p. 187, they perform some labour services, hold ‘avир-акрес’, and elsewhere in the Survey, e.g. App. p. 211, they pay a money rent and are not classed with the *boni* but described separately. They pay *skat*, e.g. App. p. 207: ‘de xiii quar. frumenti receptis de li bondis . . . et de ij malmannis . . . pro eorum redditu de skat . . . de quolibet bondo ii buzs. cumulatis, et de quolibet malmanno i buz.’ In a late vacancy roll of the bishopric of London, Min. Acc. 1140/20, the distinction is made:
compared the Ely pocarii\(^1\) and the Bury pokearii,\(^2\) who are distinguished from ordinary custumarii, or holders in lancectagio. Many consuarii, both those that held virgates and also those that held little cots and crofts and bords, seem to have been in the case of the molmen, and even to land which had been very recently assarted from the waste, and to tenements of the demesne let for a money rent, tenements which occur very commonly in earlier as well as in later manorial documents, customary rents were sometimes attached.\(^3\) As a general rule, however, it may be said that assart land and demesne tenements were held by agreement, and were not liable to customary dues. Temporary exemption from customary obligations was often, though not always, extended also to tenements of men holding the little desired manorial offices, the reeves, beadles, and the like; and land which had in some way become attached to a manorial office, passing with it, might be permanently immune, for example the reveland and aldremenloud of the custumals.\(^4\) A further question regarding the incidence of manorial rents arises in connexion with the class of men, clearly visible in some documents, and called by various names, like anilepimen or under-setles, who had no tenements of their own but were in the

\(^{1}\) Tam libere tenencium quam tenencium custumariorum vocatorum molmen.'

\(^{2}\) Tiber. B. ii. f. 117: 'Apud Pidele sunt quidam pocarii quandoque plus quandoque minus de quibus aliquis dat pro terra sua habenda ad faciendum ollas et pro veteribus seckellon' duos solidos,'

\(^{3}\) Harl. MSS. 3977, f. 38: 'tam custumarii quam illi qui tenent pokeaver.' Compare Harl. MSS. 1005, f. 69, where they are subject to the ordinary condition rents of the villein.

\(^{4}\) See especially D. S. P., 3, 14, 23, 38, 39, 59, pass. Claud. C. xi. f. 250, pass.; Faust. A. i, ff. 121, 123, and 125, where the consuetudines de hinlondes are precariae, Romescot, and money rents. The renting of the demesne was very common also at Glastonbury, and is mentioned often in the early survey of 1189. One of the articles of inquiry in this survey is the amount of demesne land occupied, 'posuit foras in libertate vel vilenagio,' and the utility to the lord of the land so occupied (p. 21: 'Et si ina fuerit domino utilius sicut est vel revocatum'). In one case (p. 121), much of the demesne was occupied by tenants and held like half virgates by a servile tenure and 'homines dicent quod utilius est domino sic tenere quam si dominus teneret'. And see pp. 23, 82, 105. Sometimes demesne land held 'per vilenagium' may be only customary land escheated through default of services or tenants.

\(^{5}\) See below, under condition rents.
‘mainpast’ of important villeins or freemen. It is difficult to tell whether such men were responsible for manorial rents, and if so, whether they paid such rents directly to the bailiff, or through the tenant to whom they were attached.

Royal rents were in the beginning distributed in accordance with no manorial tradition, and the test of customary or non-customary tenure cannot therefore be applied in determining their incidence. They were regulated by extra-manorial conditions—by the relation of the township or the hundred, that is to say, to matters of taxation and defence and the maintenance of order and justice. The nature of the regulations, however, the working of the original principle of assessment within the vill or hundred, is difficult to discover, because, as has been said, the superimposed manor confused the old arrangements of the vill, and by its substitution of the manorial lord for the king’s officers brought about a certain assimilation of two kinds of dues quite different in origin. Clearly, nevertheless, the important line of division within the manor determining the incidence of royal dues was not between men of differing status or tenure, but between men that held geldable land (*terra geldabilis, hydata*) and men that held land for one reason or another not geldable. The land most commonly not geldable was the demesne, and its extent is therefore stated usually in the custumals in real acres, and not in fractions of hides, the units of assessment. It enjoyed its exemption, originally, on the theory that it provided ‘for the maintenance of knights or clerics who are performing military service or religious functions, of which the king and the public stand in need’.

The freedom of the demesne from some or all of the ‘forinsec’ burdens to the king was, however, by no means universal in the thirteenth and fourteenth centuries; the custom of different manors varied with regard to it, and the lord often enforced participation in rents, especially in the case of tenants newly enfeoffed. Notwithstanding, too, the levelling process of the years after the Conquest, indications remain of the different types of manors of the Domesday period, in

---

1 Vinogradoff, English Society in the Eleventh Century, p. 186. See pp. 186-96 for the discussion of *inland and warland*. 
which the demesne necessarily played different rôles.¹ Some Ely manors, for example, had no demesne,² and there were manors of St. Paul's in which the demesne was largely assart land, and in which labour services were therefore very light.³ Within the warland, or land de ware, the geldable land, which was often coincident with the land in service and held at a money rent, and which might, as at Ramsey and Ely, be geldable to the manorial lord and not to the king direct, the assessment of royal dues was also sometimes very irregular. Occasionally ‘beneficial hidation’ on a small scale is evident, small tenements having been put out of hidation;⁴ more often parallels to the customary averlonds and serlonds are found in the wardacres and suitlands, and the like, the tenements to which royal dues had become attached. The custumals often record the responsibility of some individuals within the vill and not of others for royal rents, while an Ely custumal shows the curious distribution of royal dues among some manors of a hundred and not others. Much remains far from clear, however, concerning the distribution and assessment of royal dues and the relation of townships to royal taxation and justice. A similar exemption of the demesne from church dues occurs sometimes in manors belonging to monasteries and religious houses.

The best sorts of material for the study of manorial rents are the custumals of great groups of church manors and the accounts of manorial officers. Of these the custumals are more descriptive in character than the account rolls, and contain sometimes an explanation of the rent, or a clue to its meaning, and a statement of the classes and individuals upon whom it was incident. They make no attempt at classification. The later custumals often give more rents and more details than the earlier, either because the services and rents had actually increased in number or weight, or else because greater precarioulness in the rendering of them to the lord

¹ Eng. Soc. in Elev. Cent., pp. 311 et seq.
² Claud. C. xi, ff. 82, 86.

⁴ See, for example, Cranfield, in Ramsey Cartulary, ii. 5, 6, 11, 13.
INTRODUCTORY

had led to stricter definition. Where the customals contain two sets of extents for the same manors dating from different periods, or refer to the older and newer assizes, excellent possibilities are afforded for the comparison of the weight of customary obligations at different times, and for the study of the encroachments of the new money system. Ministers’ accounts are not descriptive, but record, under irregularly classified headings, the receipts of rents among the other receipts of the bailiff for the given year, and give the total amount of the rent received from the manor without details as to its incidence on individuals. Such rolls are valuable in showing the actual receipt of the rents described in the customals, and give much interesting information regarding the general financial status of the manor. Very occasionally they record, under the bailiff’s yearly expenses, the paying over of a royal rent by the bailiff to a royal officer, but usually they make few distinctions among manorial, royal, and church rents because all were received by the lord in one capacity or another. Perhaps the most generally useful and convenient of the account rolls for the study of rents are the rolls of the king’s custodians of churches during vacancies, in which the manors of a church are grouped together according to their bailiwicks, and the receipts from the manors lying within each bailiwick given very briefly. The important restriction of certain rents to certain localities is thus made evident. The Hundred Rolls also, in so far as they are customals, although omitting the greater number of the rents shown in other documents, are useful in showing this localization of rents, while with the Quo Warranto Rolls they form the best material for the study of the royal dues. Court rolls, of which comparatively few have been examined, contain sometimes interesting fines for the non-payment of rents of various kinds. An attempt has been made in the following study to cover generally the different counties, but the amount of material remaining unexamined in which rents may be found is very great, and until it has been studied more fully anything approaching an exhaustive list, or a correct classification, is impossible. A greater knowledge of local conditions, more-
over, would undoubtedly in many cases help to explain the meaning of rents concerning which little has been discovered, and their interesting limitation to certain districts. Traces of diversity and variation seem to increase in number as the material is more closely studied. The present collection of rents, while incomplete and leaving much unexplained, may perhaps serve as a basis for later additions, and indicate some at least of the main divisions of the subject.
CHAPTER I

FOOD RENTS

The study of customary rents begins best with those that point back for their origin to an ancient system of exploitation which depended, not on agricultural services and the cultivation of part of the village set apart as the lord's, but on the simpler rendering to the lord of stock and dairy products, ale, grain, provender, and other commutation rents of early rights of progress and quartering. In Wales there are unmistakable traces of such a system lingering into historical times. In England the pressure of the manorial organization succeeded in large measure in obliterating earlier arrangements, yet important food rents and certain other rents and services are hardly to be explained otherwise than as parts of a past order of things, and while it is true that the commutation of most food rents for money indicates that the general utility of a system of purveyance was over, yet even in this later period old conditions had not entirely disappeared; a gift to the lord's larder was by no means unwelcome, and monastic houses depended for their support upon regular requisitions of food supplies from certain of their manors.

In Wales and Scotland there are indications of a double system of food rents, of the purveyance rights of princes and their households and officers, on one hand—the progresses, or dovræth of the Welsh, and conveth of the Scotch—and, on the other, of the gwesta, or later tunc pound of the Welsh, the can or cain of the Scotch, the tribute sent to important chieftains.¹ Some rude distinction of this kind probably lies

¹ See Trib. Sys. in Wales, especially pp. 154 et seq.; the Denbigh Survey, especially in the communes constiudines enumerated at the end of the description of each commote (ff. 43 et seq., 146 et seq., 200 et seq., 244 et seq., and Skene, Celtic Scotland, iii. 227 et seq.).
at the base of the Saxon system also, but has been obscured past clear recognition by the processes of manorialization which have tended to assimilate rents and duties of various origins. The rents and services of the manorial period to which an origin may be assigned in older systems of purveyance, public or private, are those surviving from the old feorm, royal or monastic, those connected with hunting and the requisitions of officers, and the common food rents paid to manorial lords.

The royal feorm retained by the king and not granted away to churches belongs in the main to the earlier period, and need not be included in a study of the later rents.\(^1\) It still appears in Domesday Book as the farm of a day or a night, or a number of days or nights, on those among the ancient demesne manors in which no geld was paid,\(^2\) and it lingered on almost to the days of the Dialogus,\(^3\) and perhaps, in rare cases, later still.\(^4\) With it may be connected the requisitions of food from counties, which were soon lost in the farm of the county,\(^5\) but perhaps formed sometimes the excuse for the extortionate demands of grain and stock made by bailiffs and royal officers.

The monastic farms, on the other hand, the firmae or food rents paid to monasteries by some of their manors, were a very important part of the later manorial economy. In most, perhaps in all, great groups of manors belonging to churches there was a highly elaborated system according to which certain manors sent up in regular rotation once, twice, thrice, even seven times a year, a specified supply of food. Thus at

---

1 In Birch, Cartularium Saxonieum, No. 273, the well-known Westbury gafol, the king retains the farm in his own hands; elsewhere he grants it to churches, e. g. Nos. 241, 350, 535, 551, 622, 705.

3 Dial. Scac. I. vii: 'Toto igitur regis Willelmi primi tempore perseverans hic institutio usque ad tempora regis Henrici filii eius, adeo ut viderim ego ipse quosdam qui vicualia statutis temporibus de fundis regis ad curiam deferri viderint.'

4 Rot. Hund. i. 291, 380. Cf. i. 146: 'Item dicunt quod dicta villata est quoddam amelettum quod vocatur Stopesfeld quod debet ad fultum domini Regis iiis. per annum.'

5 Maitland, Domesday Book and Beyond, p. 169.
FOOD RENTS

Ramsey a fortnightly farm included 12 quarters of ground wheat valued at 20s. for the monks and guests, and 2,000 vokepanni or loaves for the servants, 50 measures of barley for ale valued at 32s., 25 measures of malt valued at 24s., 24 measures of fodder, 10 lb. of cheese, 10 lb. of lard, 2 treiae of beans, 2 treiae of butter, bacon, honey, 10 fressings, 14 lambs, 125 hens, 14 geese, 2,200 eggs, 1,000 herrings. In addition, 5 cartloads of hay were sent from certain manors, and £4 in money from every manor.\(^1\) An arrangement similar in its essential features is described at St. Paul’s\(^2\) and at St. Andrew’s, Rochester,\(^3\) and is clearly indicated elsewhere. St. Edmund’s manors, for example, owed two, three, seven farms a year, as the case might be, and a special farm called the ‘farm of St. Edmund’.\(^4\) Certain services of brewing also are described in connexion with the Bury farms.\(^5\) The manors of Ely threshed and carried the ‘farm of St. Etheldreda’,\(^6\) Glastonbury villeins reaped, mowed, and threshed ad firmas Glastonie.\(^7\) On the Worcester manors of Hanbury and Stoke in Gloucestershire a money rent, with a very ancient name, ferm fultum, was paid at Hokeday,\(^8\) and

C. R.
at Rollesby in Norfolk, belonging to the see of Norwich, a
ferm penes.¹ On the Ely manor of Hatfield in Hertfordshire
a rent of 16d. fultune occurs ², and on St. Edmund's manors
both fermiping and fultume.³ Such monastic farms were not
due from the tenants primarily, but were chargeable on the
vill as a whole, and must have been derived in large measure,
except for some supplementary rents of poultry and the like,
from the demesne, cultivated by the labour of the villeins. The
farm system as it appears in later times was then a method of
exploitation of the manor and dependent on domanial arrange-
ments, rather than a rent incumbent on customary tenants
within the vill, and as such it does not fall within this study.
It seems improbable, however, that for this reason it should be
severed entirely from preceding conditions. The question of its
relation to the older feorm remains, and is difficult to answer.⁴
Whether the monastic farms existed in their later elaborate
form hidden behind the frequent brief descriptions in Domes-
day Book of lands in dominio, de victu monachorum, de vestitu
monachorum,⁵ the older fosterlands, bedlands, and scrudlands
of the charters,⁶ or whether they were a conscious later
adaptation and elaboration of simpler beginnings, or even
a new system formed in some measure on the basis of the
old food rents, is not clear. A constant and heavy food
charge like that of later times would probably have had great

influence in creating the rudiments of the demesne, 'rustic work' for the cultivation of the lord's tribute being in Domesday Book part of the consuetudines firmae, and the distinction between land used to produce the lord's food and lord's land being easily lost.

Other survivals of the old purveyance arrangements are the rents and services connected with hunting expeditions, the instances of which in later documents are rare, but point clearly to heavy and important earlier duties allied to the farm. In Wales, in the fourteenth century, such services were still rendered. The Denbigh Survey, for example, describes the rents paid for the support of hunting parties, and the Record of Caernarvon mentions the Kilgh' Hebogothion, or food rent for the falconer. The best known references to such services after the Conquest in England are the passages in Boldon Book, often quoted, describing the magna casa, or hunting-house, built for the bishop, which was sixty feet long, sixteen feet wide, and the chapel, which was forty feet long and fifteen feet wide.

Certain tenants make the 'service of the forest', forty days in Founesson, forty days in Ruith, and 'feed a horse and dog'. The same services are described again in almost the same words in Bishop Hatfield's survey of a much later time. Stabilitio Venationis due to

the king is mentioned in Domesday Book.\textsuperscript{1} Still other excellent references to hunting services occur in the Winchester documents, where, commonly, the bishop's horses and dogs and falconers had to be fed, and sometimes also 'the dogs of the king which come at the feast of St. James',\textsuperscript{2} and this compulsory feeding of horses and dogs occurs elsewhere.\textsuperscript{3}

In the west, in manors near the Welsh border, hunting services were especially important. At Sutton in Warwickshire whenever the lord hunted the customary tenants used 'fugare waulassum et stabulum' in the chase of wild beasts, according to the quantity of their tenement, a whole virgate owing two days' service.\textsuperscript{4} In a charter to Worcester there is reference to the relaxation of a hunting service of two 'seuras' which the lord was accustomed to have from a certain manor, and also to freedom from *doureth* (Welsh *dovraeth*) *servientium*, or purveyance rights of the lord's officers.\textsuperscript{5} To such services as these goes back probably the Gloucester rent, the *hunteneselver*, paid at the heavy rate of 8d. a half virgate,\textsuperscript{6} and possibly, although not at all clearly, the *hyndergeld*\textsuperscript{7} of Gloucester and the *unthield* of Kent. With these rents and services should be compared the exactions and extortions of foresters, woodwards, and other royal officers, which are discussed in connexion with the rents making up the profits of counties and hundreds.

The payment of rents in food to the lord of the manor by the customary tenants from their own produce was a common obligation, and on church manors owing a farm occurs in addition to the farm. Of a recent origin for most of such rents there is no evidence; they were either survivals of the

\begin{itemize}
  \item[2] Winch. Pipe Rolls, pp. 3, 6, 14, 17, 22, pass. Compare Hazlitt's Blount's Tenures, p. 27 n. The burgesses are to find a man 'ter per annum ad stablamentum, pro venatione capienda, quando episcopus voluerit'.
  \item[7] See below, under miscellaneous rents.
\end{itemize}
same ancient system of purveyance as the farm, being in some way supplementary to it, and existing along with it, or else they represented the remains of the old food rent, side by side with which the newer *firmae* had developed. In general they were trifling in amount, and in themselves would not require a very full discussion. The universality of their occurrence among villein tenants, however, the inclusion of poultry and grain rents among customary obligations as a matter of course, gives them an importance apart from their intrinsic value, and justifies the belief in a connexion between them and some ancient, widely prevalent system of purveyance on the part of the lord.

Throughout England there was general similarity in the kind and amount of food rents paid, and a common increase at certain times in the year, especially at Christmas. The most important rents were made in poultry and grain, fish, malt or ale, and salt, or the commutation of these into money. Payment was made in most cases at three 'terms', or seasons; poultry at Christmas, eggs at Easter, and grain at Martinmas, and the manner of assessment on the villeins was not widely different in different parts of England. The rents may be studied conveniently in the full custumals of church manors. In the west, on manors belonging to the church of Gloucester, most villeins gave hens, valued at a penny each, at Christmas to their lord.¹ The rate of the payment was a hen from each villein, whatever the size of his tenement, and where two villeins together held one tenement, two hens were paid.² The rent was then, in a sense, a capitation payment, incumbent on the person, not the tenement. That it was ancient is proven by the fact that it is spoken of as part of the *antiqua tenura* of a manor.³ *Censuarii* whose labour services had been commuted entirely or in part, and small tenants by a labour or money rent, sometimes still rendered hens to the lord.⁴ The Christmas hen at Gloucester, as elsewhere, was often regarded as in some way connected with the receipt of

¹ Glouc. Cart. iii. 48, 62, 63, 71, 95, 97, *pass*.
² Ibid. iii. 63, 72.
³ Ibid. iii. 70.
⁴ Ibid. iii. 70, 89, *pass*.
wood by the tenant, and was therefore called the woodhen.\(^1\) On manors of Gloucester lying in Hampshire it is difficult to distinguish the Christmas hen from the churchscot payment of hens and eggs and corn, which was especially heavy in this county.\(^2\) In addition to the hen, sometimes in place of it, the ordinary villein paid eggs to his lord at Easter,\(^3\) but there is no evidence at Gloucester of the necessary agreement between the number of eggs and the number of acres held which sometimes appears elsewhere. Gloucester corn rents are rarely mentioned, except occasional rents of oats,\(^4\) and commutation of food rents was evidently unusual.

For the payment of food rents to the church of Worcester there are two excellent sources of information. One of these, the Register of the Priory, dating from the middle of the thirteenth century, shows that the payment of the Christmas hens and Easter eggs was much less common at Worcester than at Gloucester.\(^5\) More frequent rents in kind were oats, paid at the festival of the Purification in the form of seed with which the villein was bound to sow half an acre of the lord’s demesne;\(^6\) sheep and lambs paid at Easter, a rent later commuted for money;\(^7\) bread and ale at Christmas,\(^8\) and grain paid for churchscot at Martinmas. It should be noticed, however, that new assizes had been made recently at Worcester, and it seems probable that according to these the older food rents had been superseded by money rents, paid as an annual lump sum, or *firma*, commuting certain services and most rents; an inference which is confirmed by the

examination of the second and earlier source of information for Worcester mentioned above, the roll of the manors of the church during a vacancy in the very beginning of the century. In this roll there is frequent reference to hens and eggs de redditu which have been sold and have brought in money returns. At Abingdon and Barking the Easter eggs were commuted for cysilver, an unusual rent.

In the account rolls of Winchester hens are accounted for by bailiffs among the receipts of the manor, and still other hens are entered on the rolls as churchscot hens. The rolls mention also the semen villanorum, or seed for sowing the demesne, the gavelseed of other localities, and the Bleadon Customal mentions cotsetlescorn and veremecorn.

In all the manors of St. Paul’s food rents were collected, except in Kenesworth, Hertfordshire, Norton, Essex, and Drayton, Middlesex, which were largely assart lands, and exploited not by the services of the antiqua tenura but by the rendering of money and boon labour. All other manors paid some food rent to the firmarius. In most cases the rent took the form of hens and eggs, with the occasional addition of gavelseed, the seed for sowing the demesne, fodder corn, mallards, and capons. In Adulvesnasa, Essex, there was an interesting payment of two dodds of oats made from every house of the hidarii in the middle of March, and ad mescingam fourteen loaves. In the introduction to the Domesday of St. Paul’s the editor defines mescinga as the same word as metsung, food or meat, stating also that it occurs in the unprinted extents of 1279 as messing silver, evidently a com-

11 Ibid. pp. 43, 47.
muted payment, or *metegafol*, the older form of the word in the *Rectitudines.*\(^1\) In most manors the hens and eggs were due from tenements that show some signs of antiquity, from the regular tenements of servile labourers, virgaters, *hydarii*, or smaller *opperarii*, or from assart of the demesne or other land held by *antiqua tenura*, and not from the tenements which are often described as assarted and which were held by a purely money tenure. In most cases one hen was rendered from each house at Christmas, but occasionally on some manors two hens. Once it is stated that every house in the vill owes a hen at Christmas.\(^2\) The number of eggs, on the other hand, depended on the size of the tenement, the rate when stated being, with one or two trifling exceptions, one egg to one acre, and the half virgate being considered for this purpose usually as fifteen acres paying fifteen eggs, the virgate as thirty acres paying thirty eggs. Once or twice the number of eggs is not mentioned, but is left 'ad libitum tenentium et ad honorem domini'.\(^3\) It may probably be taken as a general rule that on St. Paul's manors every acre of land, not newly assarted, paid an egg at Easter. As has been seen, this statement is not necessarily true in other great groups of manors.

Good examples of food rents are found also in the manors of the fen district. To the Abbot of Peterborough hens were usually paid at Christmas and eggs at Easter. As in the case of the other rents mentioned in the Black Book, the total number paid by the vill is given and not the number due from each villein;\(^4\) either the compiler of the record added together the sums from the vills for his own convenience in statement, or else it was usual for the *villate* to make certain payments in common. The villagers gave also, in addition to the hens, eggs, measures of oats, and loaves of bread, in

\(^2\) Ibid. p. 143: 'et quolibet domus totius ville debet gallinam ad Nathale et ad Pascha ova.'
\(^3\) Ibid. p. 51. See also p. 48: 'Et ad pascha ova ad honorem domini.'
\(^4\) Chron. Petrob., pp. 157, 158, 159, 160, and 161: 'In Phistesle ..., omnes villani reddunt xxxij gallinas ad Nativitatem. Et pleni villani reddunt xx ova dimidii x ova et cotsete v ad Pascha.'
return sometimes for dead wood,\(^1\) and sowed the land of the
demesne with their own seed.\(^2\) Few records of Thorney have
been found, but from the full custumals in the Hundred
Rolls it is clear that several hens were commonly paid by
a villein at Christmas.\(^3\) The records of Ramsey food rents
from approximately the same locality are, on the other hand,
umerous and interesting. Hens at Christmas and eggs at
Easter were almost universally paid, both in the twelfth and
thirteenth centuries. The rate was usually one hen from
each villein, and a varying number of eggs;\(^4\) but more than
one hen was sometimes paid by a tenant,\(^5\) and the number of
eggs and the acreage of the tenement sometimes agreed.\(^6\)
A connexion between the Christmas hen and wood received
by the tenant is made, as in the case of the Gloucester \textit{wood-
hen}, the virgater taking \textquoteleft{}thorns\textquoteright{} from the abbot's wood in
return for a hen, or giving two hens for \textit{wodegone}.\(^7\) Other
Ramsey rents in kind were \textit{beneaed},\(^8\) or seed for sowing the
demesne, a ring of oats for fodder corn at Christmas or in
Lent,\(^9\) and a corn bote.\(^10\) Ely food rents too were heavy. In
the vacancy rolls of Edward I's reign\(^11\) there are usually
recorded large receipts from hens belonging to the Christmas
rent which have been sold, and from eggs belonging to the
Easter rent. A commuted \textit{foddercorn} is very common. An
extent roll of 1319\(^12\) shows the virgaters at Swaffham

\(^1\) Chron. Petrob., pp. 160, 161, 162, 163, 165, and 159: \textquoteleft{}Et omnes isti

\(^12\) In the muniment room of Ely cathedral, describing eight manors.
and Wratting paying one hen each at Christmas and twenty eggs at Easter, and at Somersham there is mention of a rent in money from a commuted woodhen called heynwodeselver or heggingswoodsilver. 1 The Hundred Rolls record Ely food rents of hens, eggs, and a cornbote at Michælmas of a sheaf of winter wheat and a sheaf of spring wheat, 2 while in the custumals of the manors of the bishopric the food rents from the manors in the Isle of Ely, and from manors in outlying counties are described still more fully. The usual rate of the poultry rent was a hen or two hens at Christmas and ten eggs at Easter from the plena terra of the typical operarius, 3 and sometimes half as many eggs were paid as acres contained in the tenement, 4 while sometimes there is no relation between the two numbers. 5 Molmen, operarii, and cottars all gave the poultry rent, and the hen is called Woodhen 6 and connected with the villein's wodericht de subbosco. 7 An interesting distinction is drawn in the description of Hecham, Suffolk, between the hens paid by operarii in full standing, for which wodericht was received, and the hens of the 'newly enfeoffed' and the undersetli, who received no wodericht in return. 8 Important grain rents, too, are described in the custumals:—

the foddercorn of six bushels of oats paid at the sowing time, or commuted for a rent of 3d. or 6d. which was due at Easter time, and if not paid promptly was, in one manor at least, doubled, 9 the cornbote or sheaf of the best wheat

8 Ibid. f. 290: 'Item sciendum quod unusquisque consuetudinarius et operarius qui dederit gallinam domino de anno reeditu habebit tria fassicula parva de subbosco per visum et liberacionem ballivi quodlibet anno contra Natale exceptis omnibus illis de novo feoffatis qui gallinas dederint et capones et exceptis similiter omnibus undersetlis.'
paid to the lord,\textsuperscript{1} the \textit{candelcorn},\textsuperscript{2} and the \textit{sedbede} \textsuperscript{3} and \textit{metecorn}.\textsuperscript{4}

In other manors in East Anglia food rents were common. A vacancy roll of Norwich in Edward II's reign mentions Christmas hens and Easter eggs, \textit{hedercorn}, and other food rents;\textsuperscript{5} \textit{tolkorn} occurs in Essex,\textsuperscript{6} and Bury villeins paid a \textit{cornbote} of 5s., which in other cases appears as a carting service of corn performed by free and unfree in possession of beasts of burden, due at Martinmas or at the summons of the bailiff.\textsuperscript{7} One curious statement seems to suggest a connexion of some kind between a 'foddercorn of the Abbot of St. Edmund's' and the hundred, as if the foddercorn were an old hundredal rendering of provender which has passed over into the abbot's hands.\textsuperscript{8}

In Kent hens and eggs are recorded on the lands of St. Augustine, where the Christmas hen is called the \textit{wodevoel},\textsuperscript{9} and Christ Church, and on the Kentish manor of Wye belonging to Battle, where some interesting details are given concerning the collection of the rent by the \textit{serviens} of the lord. The \textit{serviens} went once at each season to collect three

hens at Christmas and twenty eggs at Easter from each yoke of land. If the rent were not forthcoming on these occasions it had to be carried to the curia by the tenants within twelve days. If, however, at the end of twelve days it was still unpaid, the tenants made agreement regarding the hens, and were in mercy 21d. Large numbers of hens and eggs were paid to Rochester as part of the Exemiium Sancti Andreae. Gadercorn was paid on manors belonging to Christ Church from land in gavelkind. A Rochester cornbote was curiously connected with trespass of pasture; if between Martinmas and the feast of St. John the messor impounded any animal taken in the lord’s corn, he received a loaf of bread from the owner of the animal. If the animal were impounded between the feast of St. John and Michaelmas, however, a cornbote was given for all damage done.

In the north of England food rents were common, but were very often commuted for money. At Hexham Priory hens were paid at Christmas by terrae husbond' and cotagia. The Burton Chartulary mentions the payment of two hens at Christmas and twenty eggs at Easter among the ‘ancient customs’. On the manors of Durham the rent hens and rent eggs which are mentioned were probably paid as fixed rents (redditus assise) for the holdings. More clearly ancient were other rents of hens occasionally described and the grain rents on which the chief stress of the surveys falls. Bond and molmen both paid the lord scat rents of grain of various kinds, or the commutation of the rent called scat penys, scat

being used as a general term for tributary rent.¹ The rents most often described in Boldon Book and Bishop Hatfield’s Survey are bushels of *scat*, probably *scat frumentum*, of *scat avena*, and of *braseum*, paid by *antiqui bondi*, later put at a *penyfrerm*.² Occasionally a *scat malt* is mentioned, and *maltpenys*, a commutation of it, both of which were included in the *scat penys*,³ a general name for commuted grain rents.⁴ In the Durham Halmote Rolls *Saint gelicorn* and *gellicorn* occur frequently, and also *avermalt*, *court haver*, *court otie*, and *scate haver*.⁵ With the *court haver* may be compared the *avermalth* of Boldon Book, which was probably malt carried to the hall.⁶ The vacancy rolls of Durham record the receipt of eggs at Easter, and of grain rents commuted into money, *docorn*, *scatfarina*, and the like,⁷ and in a vacancy roll of York hens ‘de consuetudine’ at Christmas, or ‘de lak’, are frequently mentioned.⁸ *Almessecorn* occurs in a late document.⁹

The evidence from other church lands and from lay lands indicates in general poultry and grain rents similar to those already described. In the Hundred Rolls statements regarding the payment of hens and eggs and other rents in kind are fairly common. It should be noticed that in almost all these

cases the poultry rents are uncommuted, while the grain rents in the east and north have often taken on a financial form, and also that the customary rent of hens is almost always fixed at one from each villein, whereas the rent of eggs may or may not be determined by the acreage of the tenement.

The Christmas rents to the lord of the manor were sometimes, as has been stated, connected with the villein's \textit{wodexricht}, wood and estover rights, but elsewhere they seem to have formed part of a larger rent, of a Christmas gift, \textit{exennium}, \textit{loc}, or \textit{lak}, or \textit{lak}, very commonly made to the lord, which looks like an old custom, possibly a survival of the winterform of the \textit{Rectitudines}. Christmas rents were not confined to England. The Christmas hens appear in Wales,\(^1\) and also in Scotland and the north of England, where they were called \textit{cain fowls} or \textit{reek hens}, one being paid from every house that 'reeked', and the payment being called \textit{canage} and connected with a feast.\(^2\) Thus in the Lancashire manor of Ashton-under-Lyne, among the services of tenants holding at the lord's will is regularly included a Yole or Yule present to the lord 'for the sake of partaking in the annual feast of the great hall'. The present was paid, 'as it is written and set in the rental,' in fowls, cheese, or oats, which were named cane fowls, cane cheese, or cane oats, the word cane signifying head, 'and the lord shall feed all his said tenants and their wives, upon Yoleday, at the dinner, if they like for to come.' The lord is 'not bounden to feed all that come', however, but 'only the goodman and the goodwife'.\(^3\) Durham records

\(^1\) Denbigh Survey, ff. 204, 282, 283.

\(^2\) Innes, Scotch Legal Antiq., pp. 204-5: 'You will sometimes find, especially in church grants. as pertinents, \textit{can} and \textit{conveth}. Tithes are granted by some of our ancient kings \textit{de cano meo}, that is, from customs or rents paid \textit{in kind}. We have the word still in \textit{cain}: the cane fowls of a barony are quite well understood. Cane fowls are sometimes called reek hens—one payable from every house that reeked—every fire house... Conveth seems to have been a due collected by a lord from his vassals, perhaps on the occasion of journeys. Malcolm IV granted to the canons of Scone from every plough '...for their conveth at the feast of All Saints,' a cow and two swine, meal, oats, hens, eggs, candles, soap, and cheese. See Denton, England in the Fifteenth Century, p. 231 n.; Skene, Celtic Scotland, iii. 227 sqq., and above, p. 15.

describe a ‘Yulewayting’, a rent paid at Christmas, connected either with some service of watching or, more probably, derived from waytinga, an old Scotch form of conveth.  

Gerescgive occurs in the records of Burton manors, and again in the account rolls of Barton Regis near Bristol as a gift made at Circumcision, with which should be compared the geresilver of Worcester, and the Newyeresgive of St. Edmund’s, and perhaps as a rent paid at Michaelmas, the heavy Michilmeth of Boldon Book, which occurs usually with yolwayting.

Another form of the same Christmas custom was the rent ad lok, or later loksilver, common in Huntingdonshire, Cambridgeshire, Lincolnshire, and elsewhere. At Washington in Huntingdonshire the lord received from his customary tenant at Christmas one cock, five hens, two loaves valued at 4d. each, and ‘on the day on which the tenant carries this lok he shall dine with the lord, he, his wife, and his family.’ At Fleet in Lincolnshire the food so received was called lookmete. The almost enforced feasting reminds one of the analogous

---

2 Burt. Ch., p. 66: ‘...20s. for gerescgive on Christmas Day.’ Compare Liber Albus, 130; Liber Cust., pp. 32, 249, 266; Madox, Excheq., 1504. Mrs. Green, Town Life, i, pp. 206-7, says that it was taken by the sheriff to remind him to come, and was collected by scotale if money were short. Hampson, Kal. Med. Aevi, gives much curious information regarding Christmas presents and presents on January first (dies stremarum), connecting them with the Roman Saturnalia. He describes also the analogous Scotch custom of presenting the ‘sweetieskon’.

3 Min. Acc. 850/9-10 ‘... et de ciiijis. ixd. de quadam consuetudine vocata geresgive ad festum circumcisionis Domini.’

5 Harl. MSS. 3977, f. 95: a tenant by ancient enfeoffment ‘... debet dare ad consuetudinem illam que vocatur newyereseive viij. et ob. sed contradicit.’ Compare Harl. MSS. 1005, f. 71.

7 Rot. Hund. ii. 635. See also ibid., p. 655, where sokam is wrongly put for lomak, and York Vac. Roll, 1144/1, ‘de... gallinis de lak;’ Claud. C. xi, f. 66, ‘et de loc ad festum S. Johannis;’ Tiber. B. ii, f. 191 b.; and Reg. Worc. Pr. 66 a, ‘portabit lacs.’

8 Add. MSS. 35169: ‘dabit iij gallinas ad looke ad Natale et habebit cibum suum qui vocatur lookmete; pass.; Claud. C. xi, f. 128: a Cambridgeshire tenant of Ely when he guarded the fold received wool, a marking lamb, ‘et unam rodam frumenti que vocatur lokoode.’
custom of the scotale. 1 Where the food rent had been commuted into money the payment was called loksilver. 2 The word lok is evidently from the Anglo-Saxon lac, a gift, and the Latin form is presentum or exennium. In the descriptions of Oxfordshire manors in the Hundred Rolls the custom of receiving a meal from the lord in return for a 'present' to him, or giving him a 'present' in return for a meal is very common, but it is called simply a Christmas exennium, or presentum, or donum. Thus a tenant gave an exennium at Christmas of six loaves valued at 3d. each, beer, four hens, two cocks. He came to a meal with the lord in return for the aforesaid exennium. 3 At Rochester a large exennium St. Andree supplemented the farm. 4 An exennium Archiepiscopi was paid at Christ Church, 5 and le present was commonly paid on the lands of the Templars. 6 At Glastonbury the donum, which in the later extent is described as de dono ad lardarium or the rent ad lardarium, 7 a payment occurring also on lay manors in Wiltshire, 8 and in the form lardresilver at Lewes, 9 is so common and so large that it looks as if it might be a general commutation of most of the food rents. Except the church scot hens and grain, and a pasture lamb, there are few food rents noted at Glastonbury, possibly because they had been commuted there for this large money rent ad lardarium, assessed according to the size of the tenement, just as all Glastonbury labour services were often commuted for the gabulum. The

7 Mich. Ambres. Rent., pp. 8, 10, 36, 48, 57, 75, pass.; Inqu. 1189, pp. 23, 39, 72, 75, pass. and 33: 'Totum manerium reddid de dono cxxiiiis. ct iiid. sicut homines ville illud statuunt.'
8 Hazlitt's Blount's Tenures, p. 33.
villain of Bleadon and of Glastonbury received a *ghostum* at Christmas, a word probably derived from the common Welsh *'wwestva*. A curious custom is recorded in Tynemouth in Yorkshire, whereby all men of the priory, horses, dogs, and servants, went to Whitley, near by, and received from the lord a feast, *conveys* or *conveyes*. Another custom paid at Tynemouth was the *Welcom Abbatis*. At the coming of a newly installed abbot of St. Albans to Tynemouth, which was a cell of St. Albans, the fifteen tenants whose services are recorded paid forty shillings sterling called *Welcom Abbatis*.

Certain food rents which were more or less uniformly commuted for money may be conveniently grouped together. The *fishfax*, *fishsilver*, *heringsilver*, or *heringlode*, was one of the most common customary rents, made to the lord of the manor in commutation of the service of presenting him with fish for the Lenten fast, or in order that he might buy fish for this purpose (*ad pisces emendos*). The rent was paid usually at the beginning of Lent. On the manors of Worcester it was very common, being paid almost universally by the more important customary tenants, but not by cottars, especially under the old assize, and was sometimes retained under the new assize also as a sort of recognition payment from the villeins, together with *merchet*, or more occasionally included in the lump sum of money rent paid in commutation of many of the older customs. The usual rate was 3½d. a virgate. It is frequently mentioned in the account roll of Worcester dating from Edward I's reign, where the payment is usually

---

2 Mon. Angl. iii. 318: 'Modus faciendi le Conveys apud Whiteleye ... servitium quod dicitur le conveyes.' The word is probably a form of *conveth* (Celt.).

3 Mon. Angl. iii. 319. from a rental: 'Et in adventu primo novi abbatis S. Albani ad Tynemuth dabunt xv tenentes xls. sterling vocatos *Welcom Abbatis*.' Compare the shire-revesswelcome and saddlesilver.

recorded on Ash Wednesday. At Thorney the rent was
called fishpence and was paid on Ash Wednesday or on the
first Sunday in Lent, usually at the rate of a penny a virgate.
On Ramsey manors it was almost universal, occurring as fish-
silver, phiseshilver, haringsilver, money ad alloc, ad pisces
emendos, and it is one of the few rents recorded in the extents
of the middle of the twelfth as well as in those of the
middle of the thirteenth century. The rate was usually the
same in both series of extents, varying a little from manor to
manor, from a halfpenny to two pence. Sometimes the
amount due from a whole vill or from the operarii of a vill is
recorded in a lump sum, but there is no evidence of the
incidence of the rent on any class of tenants except the villeins.
In Wistowe, a Huntingdonshire manor of Ramsey, a villein’s
turn to pay came sometimes once in two years, sometimes
once in three. The rent was due usually in Lent, once at Easter,
once in the form of harengsilver at Christmas. In
the vacancy rolls and customals of Ely, heringlode and hering-
silver are recorded on the lands of the church in Norfolk and
Suffolk. At Hardest in Suffolk it was paid on St. Andrew’s
day. It was paid also on St. Edmund’s manors. There is
one instance of a payment in commutation of a carting of
fish on the lands of Burton. It was much less common in
the manors of Gloucester, Peterborough, Abingdon, Battle,
and St. Paul’s, and the Kentish monasteries. A payment

of eels occurs frequently in documents relating to the fen country.¹

_Maltsilver, Maltyngssilver, Aletol, Alepenny, Brewingsilver, Brewesteresgeld._ Food rents of malt or ale to the lord, although evidently of importance, are often less easy to understand than those of fish, grain, or poultry. The confusion arises from the fact that the ale rents were of two kinds: they were both commutations of an old food rent of rye, or of barley or malt for its making, paid to the lord at certain seasons, and they were also tolls paid by the brewers of the village either for the right to brew, like the _furnagium_ paid for the right to bake, or for the right to sell the ale when brewed; and these two kinds of rents are often not clearly distinguished in the descriptions of services. It is probable that the word _maltsilver_ was used more often for payments of the first kind, and _aletol_ and _brewingsilver_ more often for payments of the second, but the distinction is hard to keep, especially since the aletol was itself paid in kind and the original food rents might easily come to be considered as a toll for brewing. For convenience, rents of both kinds will be discussed together. The importance of the brewers on the manor and their value to the lord appears very clearly in the Hundred Rolls,¹ and more clearly still in the Placita de Quo Warranto, in the litigation concerning the assize of ale. Offences against the assize which should have been punished by corporal punishment, by means of the _judicialia_ of the manor, were almost universally punished by fines up to certain fixed amounts, which evidently, in addition to aletolls, were an important source of revenue to the lord.² There are many statements in extents and rolls regarding ale rents and tolls. The brewers seem to have been usually, but not always, customary tenants,³ and apparently in some cases at least the industry was very common on the manor, and not confined to

¹ Compare the Ely bedrepeees. Claud. C. xi, f. 42.
² For example, Rot. Hund. ii. 283, 541, 547, 549, 602, 603, 626, 629, 743, 766, 768, 775.
³ See below under judicial rents.
⁴ For example, Reg. Worc. Pr., p. 32 a; Ram. Cart. i. 474; Batt. Abb. Cust., p. 156.
a few men. The nineteen *operarii* holding five acres or ten acres each in St. Paul’s manor of Sandun gave *maltsilver*, and also four times in the year 6d., *ad braciandum*; fifteen other tenants holding half virgates in the same manor brought *vasa et uensilia ter in anno ad braciandum.* Maltsilver was usually paid on St. Paul’s lands at Pentecost, or at the time of the rendering of the farms. In Ramsey manors the typical virgater, and sometimes the cottar, made in most cases one or more measures of malt from barley, oats, or *grute,* and carried them to the *curia,* where he satisfied the brewer of the excellence of the material. When he did not pay the rent in kind he sometimes paid it in money at the rate of 6d. a virgate, or, in Therfield, of 10d. In Shitlingdon, when a virgater or *censurarius* brewed he gave a *tolpot* or a penny, except at the beginning of the year. The payment was made at Christmas, Easter, or whenever the lord willed. In Elton when eggs were collected by the miller the cottar was freed from making ‘the ale of St. Mary’. On the whole, the money payment was less frequent on Ramsey manors than the making of the ale, and in most cases was an annual food rent to the lord rather than a toll for brewing.

On Peterborough manors too the villeins made malt for the lord, and on the manors of Ely *maltyngsilver* occurs as a rent which is evidently a commutation of making malt, and also

13 Vac. Roll, 1132/10: ‘Somersham ... et de xxvjs. vd. de opere ad braseam faciendam affirmato termino Annunciationis Beatae Mariae
alemol, which is a toll for brewing paid after the first brewing.\(^1\) A Suffolk manor of Norwich paid a customary aid 'for making malt and faldage'.\(^2\) In Battle the tenants sent up a jug of ale to the lord whenever they brewed;\(^3\) and cottars were sometimes obliged to carry four gallons of ale or wine.\(^4\) On the lands of Worcester the toll for brewing was common, being taken sometimes twice. Those that owed suit at the mill paid a toll when they brewed ale to sell; a freeman or forinsecus following the soke of the mill de gratia gave a penny or four gallons, a villein gave 2d. or eight gallons, that is to say, a penny for the grinding and a penny for toll.\(^5\) The toll of the brewers is mentioned among the receipts from manors in the account rolls.\(^6\) At Glastonbury the villein paid a heavy toll on a brewing, but the lord furnished him with utensils and fuel.\(^7\) A Hexham brewer, whether 'on land of bond or cottage land', an interesting distinction, gave a toll of two gallons when she brewed.\(^8\) In Durham a penny was paid from a brewing, called in the account rolls the 'malt-penny'.\(^9\) The toll of ale is commonly accounted for in the vocato maltingsilver.' Compare Extenta Maner., 'et pro malting silver si non faciet brasium viijd. ob.'

rolls of York,' and Durham records mention a scat malt, a toll of ale, and maltpennies, and give regulations regarding the sale of ale.\textsuperscript{2} An allowance of some kind was often made for the rendering of ale or malt, or money to the lord. In the Domesday of St. Paul's, for example, it is recorded that a man brewed if he did not carry;\textsuperscript{3} in Battle Abbey he was free from works or received pasturage for his sheep on certain cliffs, or he received a small loaf;\textsuperscript{4} in Ramsey manors he was free from labour service and sometimes received money or grain.\textsuperscript{5} Both maltscot and maltgavel occur in Kentish documents.\textsuperscript{6} The manorial scotales, or drinking bouts, attendance upon which was enforced by the reeve of the manor, will be discussed under scotale.

\textit{Mitesilver}, a rent occurring on Ramsey manors,\textsuperscript{7} was probably another form for maltsilver, derived from \textit{mitta}, a measure.

\textit{Galunsilver}, a rent, mentioned in the Domesday of St. Paul's,\textsuperscript{8} is also probably another form of maltsilver, the name being derived from \textit{galones}, or \textit{lagenae}, gallons. It should be compared more probable than that from \textit{gallina}, a hen, suggested by the editor of the Domesday.\textsuperscript{9}

2 Batt. Abb. Cust., p. 156: 'Et scendendum quod unusquisque tenentium predictorum, tam liberorum quam nativorum, quotienscunque braciaverit ad vendendum, mittet ad manerium domini iij galones melioris cervisiae quod vocatur Tolcestre, et pro quolibet Tolcestro dabitur portanti i pennis pretii oboli: et sic valent Tolcestre per aestimationem per annum iij.' See Index, p. 166; Rot. Hund. ii. 785: 'Et quotienscunque braciaverit ad vendendum habet Tolcestre'; and pp. 787, 788, where, in the last case, the ale for sale is called Chepale; Abing, Acc., App., pp. 143, 150; D. S. P., p. 47, 'colcestre'; Haslitt's Blount's Tenures, p. 123.  
3 Blead. Cust., p. 200: a tollenajium or toll on the sale of a horse or beer. The toll for beer was sometimes called tolester, gavelsester, chepsester, from a sextarius or sester of beer brewed.  
4 Mich. Ambr. Rent., p. 84: 'Utrum autem debeat dare Langh'sester si habuerit cervisia venalem nece, omnes vicini sui ignorant sed dicunt quod nunquam viderunt illum dare.' Compare Inqu. 1189, p. 71: 'Et si braciat dat duo sextarios.'  
5 Ram. Cart. i. 474: 'Quotienscunque braciaverit in anno dabit unum tolpot, vel unum denarium pro eo, praeterequam principio anni.'  
7 Reg. Worc. Pr., pp. 34a, 95b, 110b.
dike of molland and workland there were appurtenant holdings outside the dike, called hogae and aree, for which a rent of salt was paid, usually at the approximate rate of one measure for one acre. The total amount so received was eighty-two and a half measures and two pecks. In addition to this regular 'redditus assisa', the bondman, whenever he boiled salt outside the vill, paid a toll to the lord of one measure called overgongmid' das; if he boiled within the vill of the boilers, infra villam bulleatorum, he paid for every patella one measure called wellerelonedes. Then, too, the lord took a toll on salt sold: from twenty measures when sold and carried extra portum he received a penny, and all bushels of salt from certain adjoining vills were brought once a year to a "holy" place outside the dike of the sea, called lemothow, and there signed with the lord's sign, as an evidence that they contained true measure. Those that brought bad measure were in misericordia.  

Brakemol, a rent paid on manors in Norfolk belonging to the bishopric of Norwich, was evidently a payment for salt, like the salt-silver—a commutation either of the old service of supplying the lord with salt, or of carrying salt for him.

Besides these more important groups of food rents, there are some minor rents recorded of miscellaneous character and less common occurrence.

Bredsilver was a rent paid in Fleet, Lincolnshire, from workland. It was probably a commutation of the duty of supplying the lord with bread. It should, of course, be clearly distinguished from the bredwite, occasionally mentioned, which was probably the fine for breaking the assize of bread—the fine exacted, as the Placita de Quo Warranto frequently show, for an offence which should have received corporal punishment and not monetary. Bread was frequently given

4 For example, Kennet, Par. Antiq. i. 156.
to the lord as a rent in kind in the manor, sometimes at Christmas as part of the loc.  

Honeysilver occurs occasionally in late documents.  

Mesyngpeny, Messingsilver. Mesyngpeny occurs in the Durham Halmote Rolls in the form of sums of money paid by different manors. It may be the same payment as that recorded in the Domesday of St. Paul's, of fourteen loaves of bread ad mescingam, a rent called messingsilver in the unprinted rolls of 1279, from which the editor takes the form, and identified by the editor with the metegafol of the Rectitudines, derived from Anglo-Saxon metsung, food or meat.

Metride, a curious rent, was paid on the lands of the church of Durham. It was paid at Martinmas in the form of one cow paid by the vill as a whole, or a half cow paid by a half vill, the fractional payment probably denoting commutation. It is mentioned often with cornage, and will be discussed in connexion with that rent.

Wallesilver, willesilver, was a rent for wool paid by Ramsey customary tenants. In Elton, Huntingdonshire, a virgater ad opus paid in the twelfth century a halfpenny ad lanam; his successor in the thirteenth century paid a halfpenny ad willesilver, as the word appears in the Chartulary, ad wallesilver as it appears in the Hundred Rolls.

Flaxsilver was a rent occurring on the Ely manor of

Barking in Suffolk.¹ There was a payment of _linum_ on Ramsey manors also,² and on a manor of St. Paul's services were rendered in connexion with raising and collecting it.³ _Flexlone_ occurs in a Glastonbury record.⁴

_Waxsilver_. The Suffolk waxsilver⁵ should perhaps be connected with the payment _ad luminare, ad candelam_, a church payment. There are interesting regulations in the Denbigh Survey regarding the finding of bees in the woods.⁶

The rents of lambs and sheep paid to Worcester, the Kentish _lamgafol_ or _lamselver_, and the Ramsey _wethersilver_ have been included among the pastoral rents. The cows _de metride_ also probably belong there. The line between payments in food and pasture payments is sometimes hard to draw clearly.

Still another rent which was common in some parts of England in the thirteenth and fourteenth centuries, must, when regarded from the point of view of its origin, as Professor Vinogradoff and Mr. Round have shown,⁷ be included among the rents representing very early arrangements. This is the _gafol_, which in Kent occurs as a separate rent, apparently part of the old tribute on the land. On the manors of St. Andrew's and Christ Church it was due from the _gavolland_, held by _gavolmanni_, and inherited by _gavolkind_. It was included among the _servicia de terra_, and was paid at Mid Lent, usually, although not invariably, at the rate of a penny an acre. It was paid in addition to a _mal_, or _firma_, or _census_,

---

² Rot. Hund. ii. 657: (Abbots Ripton.) 'I becham lini de quolibet remello per sic quod molendinum _linum_ conservet sine damnno.' Ram. Cart. i. 370: 'Quaelibet virgata integra debet duas garbas lini ... et hoc sive _linum_ seminaverit, sive non.' And p. 489.
³ D. S. P., p. 37: 'Memorandum quod tota villata debet ... fodere terram ad _linum_ et _linum_ colligere et in aqua mittere et extrahere et ad domum portare.'
⁶ Denbigh Survey, ff. 43, 148.

the ordinary commutation of services, due four times a year and three times as great as the gaefol, amounting; that is to say, to 3d. an acre.\(^1\) Some of the land that paid mal was not gavolland.\(^2\)

The compounds in which gavol appears also seem to indicate antiquity. Thus the gavolerth and gavolrep, or govelwerkes, whether rendered in service or commuted for money, seem to be contrasted in Kentish documents, and in Ely custumals of manors in East Anglia,\(^3\) with two other kinds of old services, namely, the *ben* or *wine* services, the thank-acres, filingserthes, or winewerks, on one hand,\(^4\) and the greserthes, or pastoral services on the other, and are probably to be identified with lagerthes, services *de ritiness*, ploughings demanded not as a grace or aid, *de amore*, but as part of the

---

\(^1\) Cust. Roff., p. 2: Frendsbury. Each of 21 *juga* of ‘gavoland uniis servicii et uniis redditus’ pays 10s. at four terms: ‘Hoc est mal,’ and in Mid-Lent *40d.* ‘Hoc est gable’. The *jugum* contains 40 acres. Dare. p. 5: ‘i jugum gives a gafol of 3s. 3d., and a *firma* of 21s., 3 juga and 14 acres give gafol, 11s. 2d.; 30 acres, 3o.d.; 7 acres, 7d.; 2 juga, 6s. 9d., and the *firma* on this manor is usually 3d. an acre.’ Compare pp. 3, 4, 5, 6. See also Faust. A. i. f. 118: (Littlebourne) ‘Et debet de qualibet acra *1d.* de gabulo’; f. 121: among ‘servicia de terra’ from every acre of a suling at Mid-Lent *1d.* Elsewhere the rate is less clear and uniform, e.g. f. 15. Add. MSS. 6159, f. 26: ‘Apud Moneketone sunt xviii swelling de gavelikende sexdecim eorum . . . facientes servicia per annum. De gablo reddent de qualibet acra *i.* ob. et de mala de quo-libet swelling *xxx* per annum’; also ff. 28, 30, 187.

\(^2\) For example, Faust. A. i. ff. 154, 156, 160, lists of tenants paying mal, with the gafol entered opposite a few names: ff. 166, 203, list of tenants by name owing gabulum.

\(^3\) Harl. MSS. 1006, f. lix: ploughing ‘de gablo’ opposed to ‘benitherhe’; Add. MSS. 6159, ff. 30, 34, 170, 176, 187; Harl. MSS. 3977, ff. 37, 38, 39, 61, and an especially clear distinction in the extent of Haideleigh, Suffolk (Suff. Instit. of Archaeol. iii. 229, et seq.) p. 249: ‘Item tenentes de . . . xxii terris et dimidio (*sic*) debent arare ad seysonam frumenti xliii acras de gablo, scilicet de qualibet terra ii acras. Item idem debent arare de benicherthe xi acras et i rodam’—and so with the reaping. Tiber. B. ii. frequently contrasts very clearly the ‘govelas’ and the ‘benes’ or ‘banes,’ e.g. ff. 122, 147, 151, 174, 176, 223, 227. For ‘govelwerkes’ and ‘winewerkes’ see ibid. ff. 174, 176. For ‘ritiness’ see ibid. f. 219.

custom or 'law' of the village, and probably antedating boon services. Still a fourth kind of ancient service may have arisen in connexion with the church scot rent. *Gavolseeds, gavelcorns, gavelacres, and gavelsest, or goveles*¹ of ploughing or reaping, are common, especially in the documents relating to Kent, East Anglia, and immediately adjoining counties, and may perhaps justify a presumption that the services they represent were paid by the holders of land 'anciently enfeoffed' on the old tenure, like the gavolmen of Kent. Thus the *gavolmerke* of Sussex may perhaps be explained as the setting up of hedges or some other boundaries, performed as part of an old gavol service.² Other common Kentish rents are *huuning-gabulum, hellgabulum, chesgavel, hoppgavel, gavelbore, gavelote, maligavel, cornegavell, lambafol, gavolverf, gavel timber, gavel bord, forgabulum,^1^ and a *medgavol*¹¹ which may point back to an old haymaking service. *Horsgabulum* occurs in Wiltshire,¹² at Guildford and elsewhere, *brenegaval, flagg-gavel, and tangavel or tengavel,*¹³ and at York *gavelgeld.*)¹⁴ The late *penygavelland* at Thanet is perhaps the old *gavol-land* put at a money rent. *Rodgavel, sandgavel, gavelsest, pridgavel* (for lampreys), also occur.¹⁶

¹ For example, D. S. P., p. 33: 'Terra operaria: singuli virgate debent per annum de landgable xvd. et debent de gavelsed iij mensuras quarum vij faciunt mensuram de Colcestr'. Note p. lxxiii. In 1279 'from every half virgate one heaped bushel of wheat was due under the denomination of gavelcorn (l. 107).' Norwich Vac. Roll, 1141/1; Harl. MSS. 3977, ff. 53, 'by reapacres called goveles'; and ff. 79, 82, 89.

² Batt. Abb. Cust., p. 6. Merle: 'Et debet claudere v virgatas (rods) haiae quae vocantur gavolmerke'; the service is valued at a penny. The editor suggests another explanation, that the gavolmerke were the boundaries between the gavolland and the lord's demesne. See Round, Eng. Hist. Rev., ii. 329, on the *virgata.*

The form landgafol is common with hawgafol in towns, as a rent on the land, usually on the arable land.\(^1\) It occurs also, however, in rural districts. It is mentioned, for example, on two Ramsey manors: once at Cranfield, where a virgate in pure villeinage gave 7½d. at Martinmas,\(^2\) and once at Burwell, where twenty-four acres gave 6d. \textit{ad} londgavel, and fifteen acres gave 4d. for the same payment at the feast of St. Peter \textit{ad} Vincula.\(^3\) It occurred also on Ely manors lying in Suffolk, where a \textit{plena terra} of twenty acres \textit{de wara} gave in Rattlesdene 22d., in Hitcham 21d., in Barking 10d., at Michaelmas.\(^4\) It was paid in the manors of Bury,\(^5\) of Glastonbury,\(^6\) and of St. Paul’s, where the rate was as follows: at Cadendon, Hertfordshire, from the typical virgate 7½d., and nothing from smaller tenants, due at Martinmas;\(^7\) at Belchamp, Essex, 15d. a virgate, and none from smaller holdings;\(^8\) at Tidwolditon, Essex, 2½d. a virgate, due at Michaelmas;\(^9\) and at Nastok, from eight tenants of bondland, 5d. each.\(^10\) It was paid, seemingly, in these cases not by all customary tenants, but by the larger holders only. In a Kentish manor a \textit{landchere} of 3d. from every acre was paid;\(^11\) in another case a landselver of 6d.;\(^12\) and at Lalling in Kent \textit{custumarii} were arranged in groups of three or four, each holding fifteen or twenty acres, to make total tenements amounting to sixty acres, from which 10d. \textit{landgafol} was due.\(^13\) Elsewhere land-

avese,¹ landmale,² and langol³ occur. Landcheap, occurring in Essex, has been defined as 13d. paid in every mark of the purchase money of houses or land.⁴

In Winchester account rolls there is commonly mentioned a gabulum assisum, identified by the editors with the landgafol, but reaching such large sums (£46 odd at Waltham, £48 at Clera) that it seems probable that it may have included all rents from lands ad censum, and have been only another name for redditus assise.⁵

On the manors of Gloucester a curious and difficult landgavol was paid at Hokeday and reserved to the king. It was a rent from which the king did not exempt the land when he granted it other privileges.⁶ Arrangements with regard to the incidences of the Hokeday gafol were, however, sometimes made by the abbot; certain lands he exempted entirely,⁷ and still other land he freed from all other services on condition of paying the gafol alone, which was incumbent on the eleemosinary land and owed to the capital lord of the fee.⁸

The second use of the term gafol occurs especially in Glastonbury, but can be traced elsewhere also. According to this, it sometimes seems to be the equivalent of census, or the commutation rent paid in place of all or part of the labour services in a given year. Thus at Glastonbury land was either ad gabulum (ad censum) or ad opus,⁹ and if it were

¹ Claud. C. xi, f. 159 : (Hatfield, Herts) one virgate pays 16d. a year at the feast of S. Andrew, 'de landauese . . . et ad hoc habebit woderich per visum et liberacionem ballivi.' Tiber. B. ii, ff. 140, 141.
² Feod. Dun., pp. 73, 74. See Hazlitt's Blount's Tenures. Gloss., but the form is probably a compound with the ordinary mal, or rent.
³ Rot. Hund. ii. 546 : 'Dabit de langol ijd.'
⁶ Glouc. Cart. i. 187, 318. For a Kentish reference of a similar kind see Reg. Roff. p. 542; the prior claims one-fourth of all the 'exitum pertinencium ad praeposituram predicte ville excepto gablo domini Regis.'
⁷ Glouc. Cart. i. 318 : 'Et nos acquietabimus ipsam terram de landgabulo duorum denariorum et unius oboli ad hokedai erga regem de cujus feodo est.' (Grant by Abbot and convent.)
⁸ Ibid. i. 175: The abbot grants land to a baker for 16s. rent: 'Idem vero (the baker) . . . et heredes sui acquietabunt nos de quatuor denariis de londgabulo versus capitalem dominum ipsi feodi.'
ad opus: it did not as a rule pay any gabulum.\(^1\) This use of the word occurs unmistakably both in the Inquest of 1189 and the later inquest. The rent is often paid at four terms like the mol of Kent and East Anglia.\(^2\) At Glastonbury, as at Worcester and Gloucester, the common practice, both in earlier and later records, seems to have been to commute all the services, or none of them, in a given year, according as it should prove utilius domino. The reeve carried the money so collected to Glastonbury.\(^3\) Gabulum at Glastonbury was used also in compound words for rent for special bits of land, sometimes newly assarted; thus the common morgabulum was paid for land on the moors, on which we are once told forty houses had recently been built,\(^4\) medgavol for meadow lands,\(^5\) and brechegavel for 'breches', sluices.\(^6\) Landgavel also was common,\(^7\) usually at the rate of 40d. a virgate, but bonus was sometimes given for prompt payment.\(^8\)

The same use of the gavol probably occurs elsewhere. Assart land, for example, in Berkshire, is called gavolland,\(^9\) and held by villeins, and in Kent certain tenements are said to lie gavellate, in campis.\(^10\)

1 Mich. Ambres. Rent., pp. 64, 154: 'Nihil reddit de gabulo cum sit operarius.' Inqu. 1189, p. 67: 'Si est ad opus non dat gabulum.' But see Mich. Ambres. Rent., p. 206, where weekly 'handaynes' of work are owed in addition to gabulum, and pp. 35, 151, pass.

2 Ibid. p. 67: The reeve 'debit habere totum toletum quod accidit in villa et duos solidos pro gabulo portando Glaston' unde xd. et ob. debent dari de tota villata communicatus, scilicet, dum manerium est ad firmam in manu illorum.'

4 Ibid. p. 67.

5 Ibid. p. 54.

6 Mich. Ambres. Rent., p. 83: 'Et si dat gabulum suum ante festum B. Michaelis, habebit i diem quietum ab opere, ad gabulum perquirendum.'

7 Batt. Abb. Cust., p. 63: 'Isti ... sunt similiter willani et tenent de assarto per certum redditum, et vocabur gavelland.' There are twenty such tenants paying money rent at four terms, and from them, as from virgarii and cottarii the lord may choose manorial officers, 'quia omnes sunt villani.'

CHAPTER II

RENTS COMMUTING LABOUR SERVICES; CARTING RENTS

In most custumals and other manorial documents, especially in those of manors in the east of England, certain rents are recorded which were evidently derived from domanial arrangements. These rents are not always easy to distinguish from other classes of manorial rents, but in general they may be taken as money payments made in the place of some of the labour services which were counted among the ‘works’ of the villein, forming thus part of the regular exploitation of the demesne by the lord, and being substituted for days of week-work, and, although less frequently, boon-work. In proportion to the whole number of rents incumbent on the customary tenant they were not very numerous; they were small in amount, and they are of interest chiefly because of their possible connexion with the general process of commutation of labour services for money. That they may be taken solely as indicative of the beginning or continuation of the change from one system to another is not probable. Although they occur with greater frequency in later than in earlier documents, and are especially common in the custumals of groups of manors in the east, in those belonging to Ely, for example, and are entered again in the late bailiffs’ accounts of the same manors, yet there is no indication in the records of their very recent origin. The names given them are English names with a certain ring of antiquity about them, and the fact that their appearance was possibly more frequent in the eastern counties cannot prove that commutation was proceeding more quickly there than in the west, in the face of the special emphasis laid in western custumals like those of Glastonbury, Gloucester, and Worcester, on the possibility
of the substitution in any given year of a gabulum or census for the whole service of the vill. The rents commuting individual services cannot be omitted from any study of the commutation of labour services as a whole, but they must always yield precedence to the much more important evidence of the customals and account rolls regarding the sale to the villagers of the whole number of spring, summer, autumn, and winter works (opera vendita), and the substitution for those works of hired labour which is suggested by the stipends paid to special labourers 'for their comings' (ad suos adventus), and by the statements in manorial documents of various kinds regarding the renting of parts of the demesne and the work of that class of lesser men of the manor, whose economic status has not yet been very fully studied, the undersetli, who laboured both for the lord and also for the more prosperous villagers. Such 'selling' of works and hiring of labour are the more significant lines of change. The occasional, and perhaps temporary, shift of some special service into a money rent is to be ascribed as much to the momentary convenience of the lord, who found that for some service he did not need the whole working capacity of the manor, as to the impelling force of any general tendency towards money rents. This conclusion is strengthened by the kind of service usually commuted; it is not often part of the regular ploughing of the demesne, except in occasional cases of members of the villata residing at a distance, nor of the regular reaping, but rather, as a rule, of some more special service which did not require any special skill, such as watching the crops, cutting reeds, or constructing hedges, for which the labour of a comparatively small number of men sufficed. The rents arising from the miscellaneous services thus commuted may be conveniently divided into rents commuting part of the week-work, rents commuting boon-works, and rents commuting carting duties —carting or averagium holding in the customals of some manors an important position somewhat apart from the

1 For similar substitutions in the east see Harl. MSS. 3977, f. 98: 'Ad festum S. Michaelis ad primum halemot ponet dominus quos rusticos vult ad censum et quos vult ad operacionem.' Tiber. B. ii. f. 116.
regular week-work. The commutations of week-work may be arranged, in general, although very roughly, according to the season in which the service in question was due, and at which the rent was therefore paid. A late general worksilver is once mentioned\(^1\) with which, it may be, mol should be compared.

(a) Rents commuting part of the week-work: hedernewech, edernewech, hethernewech (OE. hedrern, granary). The guarding of the crops brought in before Michaelmas, and threshed and stored in the granaries, was commonly the duty of the villagers, and is frequently described as one of the manorial watching duties. The safety of the crops while standing was the care of the messor.\(^2\) The records of Ely show that the guarding of the stores and granaries was sometimes still performed, but more often commuted for a rent called hedernewech. All the customary tenants of a Norfolk manor, for example, were to watch in turn by night, in summer and winter, in the curia, in order to guard the granaries of the bishop.\(^3\) In other manors in Norfolk, Suffolk, and Cambridgeshire belonging to Ely,\(^4\) and in the manors in Norfolk belonging to the see of Norwich,\(^5\) hedernewech was commonly paid by customary tenants, the assessment being made per capita regardless of the size of the tenement. The amount paid by virgaters, half virgaters, and cottars was often a penny

---

2. Batt. Abb. Cust., p. 67: 'Messor vero, si sit electus de customariis, habebit relaxationem iis. de redditu suo et cibum ter, ut Praepositus, et in autumno quia vigilabit noctu circa blada domini.'

3. Claud. C. xi, f. 195: (Walepole) 'Isti vigilabunt quociens opus fuerit per noctem in curia domini episcopi pro grangis domini custodiendis tam in hyeme quam in estate secundum turnum vicinorum suorum sine cibo et opere. Eodem modo vigilabunt omnes operarii et consuetudinarii tam maiores quam minores.'

4. Ibid. f. 214: 'Et dat de hedernewech, id. ob. q.' See ff. 66, 250, 255, 263, 279, 292. The Ely vacancy roll, 1132/10, exactly confirms the custumal, mentioning the rent on the same manors, e.g.: 'Et de ii. de quodam certo redditu quod vocatur hethernewech ad Natalem Domini,' Tiber. B. ii, pass.

5. Norwich Vac. Roll, 1141/1: (Thornham) 'Et de liiijs. vd. ob. de communi auxilio et quodam consuetudine vocata hodernewech terminis Omnium Sanctorum et Sancti Martini.'
each, due in different manors at Christmas, the Annunciation, or the feast of St. Andrew.\textsuperscript{1} Sometimes the custumal states the total sum due from the vill.\textsuperscript{2}

\textit{Wood rents: woodpenny, woodsilver, wodeladepenny, sumere-wodesilver, somerlode, woodhire, woodweye, wodericht, heyn-wodesilver, woodwerksilver, wodefare, woodlew.} In autumn or late summer were due many of the services connected with the care and use of the lord’s wood. The most common was the carting of wood to the \textit{curia} for the lord’s fuel during the winter, a service which was often commuted for the rent \textit{woodpenny} or \textit{woodsilver}. The Ramsey Cartulary describes very clearly the service for which this rent was paid. Between Michaelmas and All Saints two virgaters went to the wood and each took thence a cartload and load (\textit{summaginum}) to the \textit{curia}, where each received food and wood. If the virgater did not perform this service he paid \textit{2d.} a year for \textit{woodpenny}.\textsuperscript{3} On the manors of St. Paul’s the service of carrying wood to the \textit{curia} was sometimes commuted in whole or in part, sometimes still performed. A customary tenant with a half virgate might pay as much as \textit{8d.} for \textit{woodsilver}, while, on the other hand, a tenant with a whole virgate might pay only \textit{4d.}\textsuperscript{4} A \textit{woodpenny} or \textit{woodsilver} occurs frequently in the account rolls also—in those, for example, of the manors of Worcester\textsuperscript{5} and Abingdon,\textsuperscript{6} in those of Barton Regis in Gloucestershire,\textsuperscript{7} and Walsingham Parva, Norfolk.\textsuperscript{8} The \textit{somerlode} of the Ely molmen in Norfolk\textsuperscript{9} and the Thorny \textit{somer-wodesilver}\textsuperscript{10} may probably be explained as rents paid in place

\end{itemize}
of collecting wood in the summer time, and as a similar rent the *summer housesilver* of Kent.\(^1\) The *woodwege* \(^2\) and *woodfare* rents, which occur frequently, probably have the same general meaning, the going of carts to the wood for loads of fuel or underwood for the lord. Woodfare rents were especially common in Ely manors, where they are sometimes coupled with *sefare* or *sesilver*, probably denoting carriage by water.\(^3\) *Sefare* occurs also in St. Neot's, Hunts.\(^4\) *Woodwerksilver* is another Ely payment.\(^5\)

Probably most wood rents had to do with this carting of wood for the lord, for fuel or other purposes. But the villein too had need of wood, and his *wodericht*, the conditions under which he could take wood from the woodland of the manor, had to be carefully defined. To cut wood without permission, within the forest or without it, was a very serious offence, included in the Ramsey custumal with theft and bloodshed as offences not to be compounded for by *fulstingpound*.\(^6\) The extents of manors often give the regulations regarding the use of the woods by the lord alone, or in common by the villagers, stating especially the rights of pannage, and the allowance of wood at Christmas time by the lord to the virgater, called *wdetale* at Glastonbury,\(^7\) in return for his *wodesilver*.\(^\) See Batt. Abb. Cust., p. 20: ‘Debet cariare boscum de bosco domini usque ad manerium per duos dies in aestate cum uno carro et tribus animalibus propriis, pretium operis ixd.’

\(^1\) Robinson, Gavelkind, p. 220: ‘In lieu of providing a house of planks and boards when the lord visited the dens in the weald to dispose of their pannages in the summer time.’

\(^3\) For wodefare and sefare rents see Ely Vac. Roll, 1132/10, *pass.* in Norfolk. Claud. C. xi, gives full descriptions of these rents in Norfolk and Suffolk; for example, ff. 194, 198, 255, 310. Tiber. B. ii. f. 181. Compare Ram. Cart. i. 56.

\(^6\) Ram. Cart. ii. 22; i. 283, 306, 395.

\(^7\) Compare Mich. Ambres. Kent., p. 83: ‘Debet habere husbote ad aulam suam de bosco domini, et haybote similiter sine vasto per libera-
exennium of a ‘wood hen’, which has been already mentioned.\(^1\) Probably the *wodelode* and *wodlodepenny* of the rolls of Durham, Coventry and Lichfield, and Canterbury;\(^2\) the *woodhile* and *woodsilver* of Durham;\(^3\) and the *lignagium* and *woodsilver* of the forest pleas;\(^4\) the last made to royal foresters, were payments made by villeins for the use of the wood. It is not clear, however, that the distinction between payments for carting the lord’s wood and payments for the villein’s *wodericht, housebote*, was always maintained strictly. *Woodsilver*, for example, may sometimes have been used as a general name for any wood rent, and the documents often fail to describe the labour service of which the rent was the equivalent. A money payment is mentioned at Glastonbury ‘de consuetudine Wodiwarorum’,\(^5\) and two other curious wood payments, *wodehac* and *wodewelleschet*, are classed among the royal payments.

Money payments were made for the duty of bringing in other supplies also for the lord, especially in the autumn and early winter when labour in the fields was light. Thus on the Ely manor of Somersham in Huntingdonshire the lord received a rent called *collyngsilver*, a commutation probably of the service of providing the lord with fuel.\(^6\) Other refer-

\(^1\) Vac. Roll, 1132/10 (Ely): (Somersham) ‘Et de xxvis. \(\text{xl}\). \(\text{ob.}\) de opere de Wodehenes affirmato termino Nativitatis S. Johannis Baptiste vocato heynwodessilver.’ In this case the Christmas carting must have been of underwood rather than of wood for fuel.

\(^3\) D. H. R., p. 94; Bish. Hatf. Surv., p. 10, *p.s.s.*

\(^6\) Vac. Roll, 1132/10: ‘Et de iis. \(\text{xl}\). \(\text{ob.}\) de opere ad carbonem faciendam affirmato . . . quod vocatur Collyngsilver,’ Tiber. B. ii. ff. 113, 117.
ences to coal and charcoal occur in rolls of the manors of York and Durham,¹ and in the Worcester Register² and Glastonbury records.³ In many places nuts were collected, a service commuted on Ramsey manors for nutsilver, which was considered the equivalent of one man's work for one day, and was valued at about a penny." In Norfolk, at Walsingham Parva⁵ and Thorpe,⁶ the rent lyngmole or lyngpeny was paid, probably in commutation of cutting or carting ling for the lord, or possibly in return for the villager's right to cut his own ling, and at Rollesby in the same shire a similar rent, turfdole,⁷ occurs, which is perhaps the same as the Turfeld or Torefeld (turf yield) of Dengmarsh, Kent, a payment made instead of cutting turf.⁸

Here may be included too the shernsilver or sharppenny, the commutation of the very common service of carting manure to the lord's fields and scattering it.⁹ The rent appears under this name both in the east and west. It is found, in the west, on the manor of Littleton belonging to Gloucester, as a custom valued in ordinary years at 12d.¹⁰ sharland occurs at Rudford,¹¹ and a certus redditus of sharpselver of two

¹ Vac. Roll, 1144/1 : 'Et de cxxiiii li. vjs. vd. ob. de dominicis affirmatis firma molendini tolneto chirinagio carbonibus marmis fructu gardini et passagio de Tyne affirmatis.' Compare Bish. Hatf. Surv., pp. 219, 220; D. H. R., pp. 91, 139, 197; Bold. BE., p. 587.

⁶ Norwich Vac. Roll, 1141/1 : 'et de xlvs. iiiid. de consuetudine videlicet cornu et clau' et lyngmole.' Compare Tiber. B. ii, f. 183, a service of collecting ling.
⁷ Vac. Roll. 1141/1 : 'Et de vs. xid. ob. de consuetudinibus vocatis turfdole fermpenes et melderfe.'
⁹ Claud. C. xi, f. 176 : 'spargere fimum'; Norw. Vac. Roll, 1141/1 : 'cariagio fimorum.' Compare Jacob's Law Dict. : 'Some customary tenants were obliged to pen up their cattle at night in the pound or yard of the lord for the benefit of their dung; or if they did not do so they paid a small compensation called sharpeny or sharppenny' (A.S. scearn). 'In the north,' Jacob continues, 'cow dung is still sometimes called cowshern.' Probably, however, the rent was also a commutation of carting and scattering manure.
¹⁰ Glouc. Cart. iii. 37.
¹¹ Ibid. iii. 109.
shillings a year on Worcester’s manor of Hertlebury. At Bleadon men were obliged to go to the sherntrede, to help manure the lord’s land. In the east it is found on certain Ely manors in Norfolk and Essex. In Pulham, Norfolk, coterelli with acre holdings paid a penny, sharsilver, if they had cattle of three years’ age. For one animal they paid a halfpenny, for two or three a penny, and for every additional three a penny. The total sum cannot be given, the custumal states, because it ‘increases and decreases’ with the number of cattle. In Littlebury, Essex, an acre owed 12d. de sar-penni; and tenants on the same manor paid scharpani. The rent occurs among the redditus mutabiles of the Bury custumals, usually at the rate of a penny an animal, and in Essex manors belonging to St. Paul’s, seracres and sarlond were probably held by the same service.

Rents paid in commutation of services in the fields in connexion with the growing grain, or of haymaking in the meadows, were very few in number. Ploughing rents, except the commuted gafolerth and graserth, were rare. A wedselver, or commutation of weeding, occurs in a Kentish document. Repselver also occurs in Kent, but may refer to the rent from a boon-service rather than a week-work. Perhaps the Norfolk wrougsheryng is another harvest rent, but the statement regarding it is not clear. Very occasionally rents were paid in commutation of haymaking. Thus ‘meadow-cutting’

1 Worc. Vac. Roll, 1143/18: ‘De certa consuetudine que vocatur sharsselver.’
3 Claud. C. xi, ff. 217, 220.
4 Claud. C. xi, ff. 174, 175: ‘R. tenet unam acram in curia sua pro duodecim denaris de Sarpeni,’ Sarpansi also occurs; and see Vac. Roll, 1132/10: ‘Et de vid. quadam consuetudine coterellorum vocata sherntrede hoc anno in estate.’ Tiber. B. ii. f. 223.
5 Harl. MSS. 3977, f. 37: ‘De sharsilver pro quolibet animali 1 ob. et est redditus mutabilis.’ Elsewhere 1d., e.g. ff. 38, 39, 83.
6 D. S. P., pp. lxvii, and 46, 49. The editor explains that ‘sexlond’ should be ‘serlond’.
7 Add. MSS. 6159, f. 174: ‘De wedselver ijs. iiijd.’
8 Faust. A. i, f. 120: ‘Et de Repselver iijd. ob.’ Also, ff. 114, 124, ‘ripselure’ and ‘ripselvere’; Harl. MSS. 3977, f. 13, ‘rep selver’ at St. Edmunds Bury. See Ashley, Econ. Hist. i. 115; Mrs. Green, Town Life, i. 171 n.

on a Rochester manor was paid as a man or a penny from each house, and a *sithpeni* occurring on the same manor is probably another form of the same payment.\(^1\) *Medwesilver* is found in East Anglia.\(^2\) Much more common was some special allowance made at haying-time by the lord to the villeins, apparently in recognition of a service in the nature of a boon—the fork full of hay, the ale or food given in the field, the 40d. from the lord’s purse, the *medsipe*, *werthale*, or *manesef*, or the sheep loosed in the meadow. Similar allowances to villeins were made after other precarial services, for example at the *Repegos* and the *forthdrove* at Ramsey.\(^3\)

*Wascheypene* was a late Ramsey commutation of the common service of washing sheep.\(^4\)

**Heggingsilver, Heyningsilver, Heynwodesilver.** The setting of hedges round the growing grain, to keep out cattle, and of hedges round commons or pasture lands, to keep the cattle and other animals in, were services more often commuted. The customals usually describe a service to be performed by the villagers in the collection of thorns, sticks, twigs, and underwood, *wodecast*, *restingwode*, for hedge-making. The commutation of the actual setting of the hedge was probably called *heggingsilver*,\(^5\) *heyningsilver*,\(^6\) and the commutation of

\(^6\) Claud. C. xi, f. 115 (Ditton, Camb.): ‘Et de heyningsilver ad parcum de Haffield obolum ad festum S. Michaelis ad placitum domini.’ Cf. ‘parcesilver’.
the collecting of the wood for it probably *heynwodesilver*.

A rent occurring on Ely manors, and paid on the feast of St. John Baptist, *hirdel penny*, by metathesis *hildersilver*, mentioned in Norfolk in connexion with faldage and pasture payments, may have been a similar payment substituted for the duty of setting up hurdles for sheepfolds and the like. In Kent a similar *Watelsilver* occurs. Hedgebote, heybote, was the common rent, of a slightly different character, paid by the villein for the right to take *heynwode* for his own hedging.

*Segsilver, Seggesilver*. Some time during the summer or early autumn occurred the cutting of sedge, or reeds for thatching. A *segsilver* commuting this service is common in the fen district. In the Ely manor of Dunham a *plena terra* of fourteen acres gave 4d. a year for *seggesilver*, or else cut and bound sixteen cartloads each containing forty sheaves of great rushes. In other Cambridgeshire manors virgaters paid commonly 6d. *segsilver*, half virgaters 3d., cottars 2d. In manors in Norfolk and Suffolk *segsilver* was paid at the lower rate of a penny, or a fraction of a penny. The cutting of

1 Vac. Roll, 1132/10. Compare Vinogradoff, in Quar. Journ. Econ., 22, pp. 62, sqq.: ‘puling up of hedges or the haining of sheep, cows, and horses out of the commons’: ‘It is ordered that the sheepfolds shall be hained out of the corn-fields’: and compare Charnock, Man. Cust. Essex, p. 5: Frampole fences were ‘such fences as every tenant of this manor (Writtle) had against the lord’s demesne: whereby he had the wood growing in the fence and as many trees or poles as he could reach from the top of the ditch with the helve of his axe, towards the repair of his fence.’

3 Add. MSS. 6159, f. 177.

4 Claud. C. xi, f. 34: ‘Et de seggesilver per annum quatuor denarios equaliter vel falcabit et ligabit sexdecim caretatas grossi rosci scilicet quelibet caretata de quadraginta garbis sed non cariabit. Et tunc erit quietus de predicto segselver.’

5 Claud. C. xi, pass. See also Eng. Hist. Rev. ix. 418: ‘from a cossetle *2d.* for segselver.’

6 Claud. C. xi, ff. 263, 279, 286, 292: at the rate of 1d. or 1d. See Ely Vac. Roll, 1132/10: (Hecham, Suff.) ‘Et de lijs. viijd. *ob. de redd’ ass. de seggesilver de termino Nativititas S. Johannis Baptiste.’ And also
rushed was a very common duty of the Ramsey villein also. The rushes were used for thatching, for bedding for stalls, and for other purposes. A similar payment was probably the Ely *roserye*.

Other rents, not to be assigned to any special season, were paid in commutation of the duty of maintenance of parts of the demesne or the *curia*. Thus at Crondal and adjoining manors in Hampshire a *poundpani*, or *pondpani*, at the heavy rate of 3s. 2d. a hide, 9½d. a virgate, was paid probably for the maintenance of the pond. *Poundsilver*, perhaps a different rent, occurs on a Canterbury manor. A pond in the *curia* of Swaffham, Cambridgeshire, was valued at 18d., and the duty of keeping the mill pond in repair is often mentioned. *Parkselver* was paid at Shelford in Cambridgeshire by customary tenants, probably in commutation of the service of keeping in repair the fence round the park. *Lardersilver*, mentioned in extents of manors belonging to Worcester and St. Paul's, was probably the commutation of some service connected with the salting-house. At Glastonbury, as has been said, the commutation of a large food rent was paid *ad lardarium*.

*Winyardsilver*, or *wynsilver*, the rent in commutation of

6 Ashmol. MSS. 864, f. 17: 'Et mundabunt stagnum molendini de Heywood et val. ob.' Compare Inqu. 1189, p. 26: 'facere meram in grangia.'

7 Claud. C. xi, f. 129: A half virgate pays parkselver ¾d. at Michaelmas. 'Summa de parkselver per annum de operariis ixd. ob. q.' Tiber. B. ii, f. 217.

labour performed in the vineyard, was very frequently paid. Sometimes virgaters or half virgaters furnished either a man for a day’s work in the vineyard, or the equivalent of his labour, usually a penny; sometimes the villeins in common furnished a man to work for a week or more, or paid a lump sum of money.¹ Yaresilver was paid in the north for the repair of weirs or dams.²

(b) Commutations of boon services. The rents commuting week-work were comparatively few in number, but rents commuting boon-work were almost unknown. Boon-works, filsinerthes, winewerkes, opposed on one hand to gavelwerkes, lagerthes, and on the other to graserthes and other services of a pastoral nature, while probably later in origin than the gavelwerkes, and always regarded as supplementary and in theory de amore, or ex gratia, not de consuetudine, were less unwieldy than the week-work, and the lord was therefore reluctant to surrender them. Boon-work was demanded from tenants owing no other labour services, and was naturally enough the last service to be commuted.³

Bedripsilver occurs in a court roll of Addington, Surrey, of Edward II’s reign,⁴ and again in a Bury St. Edmunds custumal.⁵ Some indication of the commutation of the reaping service is found also in a late account roll of Barton Regis in Gloucestershire, a roll which records a number of commuta-

¹ Rot. Hund. iij. 543, 603, pass. ; Ram. Cart. i. 288 : ‘Ad vineam etiam colendam de Rameseia semel in anno per unum diem inveniit unum hominem laborantem, ita quod post solis occasum domi redeat ; vel magistro vineae pro opere illius diei debit unum denarium, tam pro homine misso in vinea, quam pro denario dato de uno opere.’ And i. 302, 325, 356 ; ii. 27, 31, 41, 46, pass. ; Claud. C. xi, ff. 38, 115, 121, 171, 263, 276, 299 ; Tiber. B. ii, f. 127, pass. ; Reg. Worc. Pr., pp. 47 a, 51 b.

⁴ Hone, Manor, p. 152, quoting court roll of Addington : ‘Thomas Cubbel is summoned because he has concealed 2½d. of bedripsilver forthcoming of a certain tenement which is called le popeland and has detained the said 2½d. for seven years past and still detains it.’
⁵ Harl. MSS. 1005, f. 68 : ‘de Bedrepesilver in festo S. Petri ad Vincula xvjs.’
tions of labour services, and in Bishop Hatfield’s Survey of Durham.

Bene was probably, like the bedripsilver, a commutation of boon-work. It is found in the same late roll of the manor of King’s Barton, Gloucestershire. ‘Thankecres’ occurs as a rent in a late roll of the manors of the Bishop of London.

Benesed was evidently a commutation of the obligation of furnishing seed for the sowing of an acre or half-acre of the demesne, in addition to the gavolsed. It also was paid at King’s Barton. It is tempting to connect the wiveneveddinge of the same manor with some weeding boon performed by women, like the bedewedinge of Ely, and the weddis of Ramsey, but the term seems to mean literally ‘wives’ wedding’ (see p. 113).

(c) Carting Rents. In some cases time was allowed the villein in his regular week-work for carting services, in others such services were regarded as extra services, like the boons, not counted to him for ‘works’, and sometimes even paid for in part by the lord with a small sum of money, or food, or drink. Even in the later extents much carting had still to be rendered by the villeins, and the service was in large measure uncommuted, although there is some evidence in the account rolls of a class of hired carters, men coming, de prece, either from outside or, more probably, from within the manor, from the cottars, crofters, and lesser censnarii, who might be

5 Min. Acc. 850/10: ‘et de xvijs. iijijd. de quadam consuetudine vocata Benesed ad festum Omnium Sanctorum.’
6 See below under miscellaneous rents, and Glouc. Cart. iii. 70, 71; Claud. C. xi, f. 64.
7 Claud. C. xi, f. 43: a plena terra pays 25, for average and carries one day called Beneweynes, three ‘navatas bladi cum tota villata per annum de consuetudine usque ad lennam sine opere’. The lord supplies the boat. Compare f. 50: a lawesfoter, probably opposed in meaning to beneweynes, one being regular, the other precarious. Compare also Cust. Roff., p. 10: carters have 1d. for drink. D. S. P., p. 34: fifteen days credit given for carting.
rents as paid substitutes by the villagers, or hired outright by
the lord, when occasion demanded, the more unwieldy service
of the regular *operarit* being in consequence commuted for
money. Carting rents might also arise where not all the
carting exigible from the manor was required, and the surplus
could conveniently be turned into money. For the regular
virgaters with fields of their own to till in addition to their
labour on the demesne, the distant carriages sometimes
described, requiring more than a day and a night, must have
been a serious inconvenience, and one from which they would
gladly have escaped by means of a money payment.

A distinction is suggested in the Liber Custumarum be-
tween *aversilver*, the payment made by tenants in place of
furnishing a beast of burden, and *summagium*, the payment
made in commutation of the actual carriage of loads.¹

*Averare* is, however, the common verb meaning to cart or carry,
and a distinction between carrying and furnishing the means
to carry does not seem to be maintained in the documents.
Carriages, *averagia*, were usually of two kinds, the manorial
carting, and the long or short cartings outside the manor.
The carting within the manor consisted of carrying grain to
the granaries, of *wodeclodes* from the wood to the *curia*, of
rushes and hedging material from the marsh and the wood,
of manure from the fields.² This carting was usually in-
cluded in the week-work, ‘counted to the villein for a work,’
and was not often separately commuted. The longer cartings
outside the manor, on the other hand, were more in the nature
of special services. In a number of cases they were subject to
commutation, in whole or in part, and the descriptions in
some customaries of them and the rents commuting them are
full and detailed. The Ramsey villein in Shitlingdon, for
example, had to perform both long and short carriages outside
the manor,³ and long carriages were made from Ramsey

¹ Lib. Cust. gloss.
f. 80 : ‘si autem averagium illud sit de blado ad vendendum vel braesio vel
hiis similibus . . . si autem opus fuerit ad portandum semen ad campos
die Sabbati.’
³ Ram. Cart. i. 462.
manors to places as distant as London, St. Albans, Cambridge, Bury St. Edmunds, Colchester, Ipswich. The long cartings in St. Edmund’s manors were called langerode, poperode, and schirefore, the third possibly connected with suit at the county court.\footnote{Harl. MSS. 3977, f. 98: one average a year called langerode, one called poperode, and another called schirefore, ‘tertium debent averagium quod vocatur schirefore tunc debent quatuor homines ire ad primum comitatum ... et ad primum hundredum et sic acquietare villam. Et ad aliud comitatum ibunt alii quatuor.’} An important part of the carting on the manors of St. Paul’s was the carriage of the food farms to London, a service which fell on some manors several times a year. The duty of carrying such farms was a villein obligation, assessed ‘secundum quantitatem tenementi’ on the lands \textit{ad operationes}.\footnote{D. S. P., p. 34: ‘facit xij averagia firmarum per annum et pro quo-libet averagio quietus erit ab una operacione.’ And pp. 6, 17, 47, 56, 64, 67, 68, 82. Compare Harl. MSS. 3977, f. 98.} In Essex this carriage was made by water, at the cost and risk of the villein, although the \textit{firmarius} of the manor sometimes furnished the boat and its steersman. If the boat were lost and any escaped, the villeins met the expenses.\footnote{D. S. P. p. 67: ‘et debet portare ad navem cum suis paribus firmam ducendam lond’ et cum proprio custo ducere Lond’ ... Set dominus inveniet navem et rectorem navis suo custo set iste operarius erit quietus de operibus suis dum fuerit in itinere illo.’ And pp. 47, 57, 64, 68, and Introd. lxxviii.} The smaller holders in these manors of St. Paul sometimes helped load the boats; in other cases they themselves went to London driving the herds of swine.\footnote{Ibid. pp. 27, 68.} The carriage by land is sometimes commuted under the name \textit{aversilver},\footnote{Ibid., Introd. lxxviii, quoting I. 89.} the carriage by water under the name \textit{shepsilver}.\footnote{Tiber. B. ii, ff. 177, 179, 181; Vac. Roll, 1132/10; Claud. C. xi, ff. 94, 198, 255, 310.} Tenants of Ely and Ramsey manors and others in the fen land also had carriage by water to perform whenever grain or other supplies for the farm or other purposes had to be taken to the monks, and the commutations of this carriage appear frequently as \textit{sefare}, \textit{sesilver}, and \textit{seesilver}.\footnote{Tiber. B. ii, ff. 177, 179, 181; Vac. Roll, 1132/10; Claud. C. xi, ff. 94, 198, 255, 310.} The
customars of Newton and Hawkston, for example, provided a man with a boat to take to Ely a bushel of the best corn.\(^1\)

Carting services at Ely were sometimes commuted for large payments, amounting to £9 13s. 6d. a year when placed ad vertum in Somersham in Huntingdonshire.\(^2\) At Littleport and Stratham a ‘full land’ of twelve acres paid 2s. de averagio, and other lesser tenements paid in proportion to their size.\(^3\) A small waynselver was paid on the Ely manor of Northwold, Norfolk,\(^4\) and a more important rent, the Londinelode, or Londenepecny, was paid, evidently instead of carriage to London, in Thelford and Grantesdon, in Cambridgeshire, at the rate of 12d. from a half virgate of eighteen acres.\(^5\) On the manors of St. Edmund’s in Suffolk lodesilver appears.\(^6\)

There were two kinds of carting rents at Durham, the payments in place of carrying loads of wood, wodelades, and the averpennies. Bishop Hatfield’s Survey, compiled in 1382 from an ancient feodary, shows clearly the carriage duties. For example, every bovate of a bond land at Derlington carried a cartload of wodelade, made ladas on the visits or journeys of the bishop, and in addition to these services made three annual cartings of wine, herrings, and salt.\(^7\) The woodlade was often commuted for a money rent paid at the feast of the Nativity of St. John Baptist,\(^8\) and in addition a woodsilver was paid.\(^9\) The commutation of the other ladas or carriages,

\(^1\) Extent Maner. Cf. Ram. Cart. i. 432: ‘faciet etiam averagium quater per annum per aquam usque ad Sanctum IVonem, et Ramesiacam ad remotius et habet unam panem competentem; et non computabitur pro opere nisi impediatur per procellam, quod non possit tempestive redire.’

\(^2\) Claud. C. xi, ff. 96, 109.

\(^3\) Ibid. f. 43 et pass. for commutation.

\(^4\) Ibid. f. 258: a plena terra of 48 acres gives 3d. waynselver.

\(^6\) MSS. Gough, Suff. 3 Bodl. (13 H. VI) f. 14: ‘et pro lodesilver qr.’ And ff. 38 b, 42 b.

\(^7\) Bish. Hatf. Surv., p. 4: ‘et unaquaeque bovata unam quadrigatam de wodelade, et facere ladas in itineribus episcopi, et praetereta ij ladas per annum ad vinum, aliec et sal ferendum.’ And pp. 8, 99, pass.

\(^8\) Ibid. pp. 4, 18, 28, 45, 128, 186, 200.

\(^9\) See woodsilver.
occasionally called outlads,\(^1\) when made outside the manor, were called averpennies, daverpennies, and were a large item of receipt.\(^2\) There is mention frequently of averacres. avereth, or avereth, which is taken by the editor of the Survey to refer to oats, but seems more probably connected with carriage duties, like averlond elsewhere, the land supporting an affrunt, or carting horse,\(^3\) or owing special carting service. Wodlade, wodladepenys, and averpennies occur commonly in Boldon Book, and again, with an avermalt, in the Durham Halmote Rolls.\(^4\)

Of still greater interest is the information regarding carting in Kent. The Rochester manors that owed a farm to the monks owed also the carriage of the farm, four hundred and forty-four averes being necessary for the carriage of the farm of two months, out of a total of five hundred and fifty averes mentioned on the manor of Southfleet. When, moreover, the lord wished to send loads to London the gavelmanni came with horses and carts and took each three-quarters of a load to Gravesend or Northfleet, putting the loads on the boats in their own sacks. If the sacks were lost, no further carting was done until they had been replaced by the lord.\(^5\) Elsewhere special provisions were made for carting in case of a visit from the archbishop.\(^6\) A very remarkable arrangement is recorded in Wye, the great Kentish manor belonging to Battle.\(^7\) The juga of the manor were divided into juga libera and juga servilia vel averagia. Of the servile or carting juga there were thirty, which were

\(^5\) Cust. Roff., p. 2: 'Summa de averes D et L. Opporret inde expendire ad firmain duorum mensium ccce averes et xliij.'

\(^6\) Ibid. p. 9: 'Et de quolibet avero sequenti archiepiscopum habebunt unum panem. Et si archiepiscopus esset in villa, portabunt corredium de proximis foris.' Compare Batt. Abb. Cust., p. 51: 'Hii vero qui tenent debent facere averagium bis in anno si abbas ibidem adveniet, scilicet invenire xij equos cum custodibus ad portandum panem de Wy.'

grouped into three equal *wendi*, each *wendus* making ten cartings every three weeks; one *jugum*, that is to say, making one carting, on Saturday, in order to carry half-loads of corn or barley from Wye to Battle. In addition free *juga* owed thirty-three *averagia* in summer. In this case the heavy carting service seems to have been the distinctive mark of subjection. *Wenlonds*¹ and *averlonds*² also occur in Kent, and the cartings seem to have been still actually rendered at the time of the compilation of the extents. *Cornlode, a consuetudo arenata*, appears with *housebote* and *wodelode* in Addington, a manor of Canterbury.³

The carriage made by the villeins and more important *operarii* of the manor was usually of food supply, either of the farm for the monks or of the surplus grain and stock of the manor, to ‘neighbouring markets’, or elsewhere.⁴ The large amounts arising from the sale of this surplus produce, and the frequency of the sales as they are recorded in the bailiffs’ accounts, deserve study.⁵ The statements give an impression of more freedom of intercourse. greater mobility of trade, and less economic self-sufficiency than we are usually disposed to allow the mediaeval village.

Special or occasional cartings are sometimes described of mill-stones, wood, or salt.⁶ In Durham ‘*le courtegere*’ (court

⁴ Harl. MSS. 3977, f. 85: ‘Item antecessores sui solebant facere averagium apud Donewyc . . . et alia mercata vicina et provisum est quod dabit pro illo averagio ad festum S. Edmundi ijd. ob. et allocabitur ei pro uno opere.’

gear?) was carried,1 and in Yorkshire lades and rades are mentioned.2 These special cartings were often made by the smaller tenants of the manor, the cottars, and crofters, and small censuarii. If they had no horses they usually made the fotaver, or carriage super dorsum, or its equivalent.3 In a Cambridgeshire manor the averagium pedile was, it is said, for the purpose of carrying ‘letters, ducks, eggs, and those sorts of things’.4 The St. Paul’s cottar, as has been shown, drove the swine to London as his share in the carriage of the farm. The serviens of the lord could send the St. Edmund’s villein on such service as part of his week-work.5 Sometimes, however, the cottars and lesser holders had horses of their own, and therefore carried horseloads, horsavers as they were called in Kent,6 or else, as on a manor of Battle, paid a rent called horsgabulum.7 The pokeavers of Bury St. Edmunds may also be connected with carting services. The averaker-silver, which has been taken as ‘silver for oats’, aver being taken to mean oats, is explained in a passage quoted by Professor Vinogradoff in which every cottar on a Kentish manor is said to have a horseacre, from which he supplies a horse to carry grain and the like to Canterbury.8

1 Feed. Dun., p. 322.
2 Mon. Angl. i. 417.
4 Harl. MSS. 3977, f. 85: ‘si serviens velit mittere eum apud Sanctum Edmundum cum aucis et gallinis pullis gallinis columbis ovis butiro caseo vel consimilibus quae portare poterit sine caballo allocabitur ei pro uno opere.’
6 Batt. Abb. Cust., pp. 72 sqq. ‘Note cartings ‘de monte et sub monte’. And pp. 76, 82: ‘Omnes qui debent horsgabulum per annum debent averrare in adventu Abbatis cum somoniti fuerint, apud Britholton’ vel Sarum vel alibi, ad voluntatem domini usque ad xx leugas, et erunt quieti illo anno de horsgabulo.’
From this manorial carting should be distinguished the *avera* or carrying services due to the king, which are often mentioned with *inwards* and *outwards* in the earlier documents. The word is frequently found with this meaning in the lists of immunities in charters. The king's wood was still carried in the time of the Hundred Rolls.\(^1\)

\(^1\) D. B. B., pp. 130, 138, 169, 240; Glouc. Cart. i. 72; ii. 127, 131, 220; Rot. Hund. i. 183; 'Dicunt quod W... cariare fecit meremium domini Regis per abbates et priores usque Glouc' et preterea cepit xxm. in hundredo pro dicto cariagio.' And i. 211.
Numerous rents were paid to the lord of the manor for the pasturing of the villein's cattle, the agistment of his swine, the use of the pasture-lands, wood, and waste of the village. Some of these rents were evidently ancient, going back to times when pasture-rights and the related management of the waste were of very great importance. They are distinguished from other rents based upon stock, for example from the *tonmutum*, which were considered not as payments for privileges, but as in a sense recognitions of villein status. It should be noticed, too, that in many cases rents which had no necessary connexion themselves with pasture or with cattle were assessed upon the number of animals held by the villein. Thus the common method of assessing the lord's tallage on the manor, and in some cases the *wardpenny* also, was either according to the amount of the tenement, or according to the number of the animals held.

Among the most ancient pasture payments were the *gaerswyn* and the *graserthe*. The *gaerswyn* appears in the *Rectitudines*, and in Domesday Book, in the accounts especially of Sussex and Surrey. It was a rent of one out of a certain number of swine belonging to a villein, in Domesday Book the seventh, and was paid for the right to pasture all sorts of animals, resembling strictly therefore herbage rather than pannage. It probably appears in later times in the *garsanese*, *gershenese* rent commonly paid in the manors of St. Paul's.

1 For Mr. Round's discussion of these rents see Vict. Count. Hist, Surrey, i. 291, and Sussex, i. 365.
2 D. S. P., p. 6: 'Reddent eciam singulis annis garsanese scilicet iiiijd. et ob. de qualibet virgata quae averat et quae non averant faciunt fotau-
and of St. Edmund’s,¹ and in certain manors in Bedfordshire, Huntingdonshire, and Oxfordshire,² as they are described in the Hundred Rolls, usually as a money rent, and sometimes no longer clearly distinguished from pannage or thac, the money paid for the agistment of swine only.³ Thus St. Edmund’s customary tenant, if he had ten swine, gave the lord the tenth; if he had fewer than ten and they were ‘in pannage’, he gave the lord a penny grescense for yearlings, a halfpenny for half yearlings.⁴ At Ramsey and elsewhere, however, the payment of one from a certain number of swine owned by the villein was probably in the beginning a pasture payment.⁵ The gavolswine, which in origin was a food-rent to the lord unconnected with pasture, was also probably later identified with the common pannage. In Kent it is defined as a rent paid by tenants in the Weald for licence to keep swine and agist the swine of others.⁶ It occurs also at Lewes.⁷ In spite of a confusion of rents in later times, in early days probably one usual method of securing pasture-rights of all sorts was the render of the grass swine to the lord.

Another kind of return for pasture-rights seems to be indicated by the frequent graserthe services of the custumals,⁸ or the rents commuting such services. Reminiscences often appear in the later documents of the ancient threefold division ever, et si habuerint porcos dabunt de pannagio . . .’ Also p. 51 and Introd. p. lxviii.

¹ Harl. MSS. 3977, f. 94: ‘Si pauciores porcos habeat quam decem et sin in padnagio dabit pro quolibet porco ijd. Si autem non sint in padnagio pro quolibet dabit jd. quod vocatur gresenese si sit unius anni.’
² Rot. Hund. i. 6; ii. 613.

⁴ Harl. MSS. 3977; f. 94.
⁵ Ram. Cart. i. 323, 345, 356; Burt. Ch., p. 73; D. S. P., p. 71; Rot. Hund. ii. 872.
⁶ Robinson, Gavelkind, p. 220.
⁷ Mon. Angl. iv. 9, quoting a twelfth-century document: ‘Terra de Bream, xxx et ij de servitio et x carratas de bushe et unum present valens vjd. . . . et gavelswin.’
⁸ For example, Rot. Hund. ii. 768: ‘Item si habeat carucam integram vel cum alis sociis conjunctim illa caruca arabit domino ij acras terre ad yvernagium et herciabit quantum illa caruca araverit in die et istud servicium appellatur greserthe pro quo servicio ipse Willemus et omnes alii consuetudinarii habebunt pasturas dominicas ad diem ad Vincula Sancti Petri usque ad festum B. Mariae in Marcio et prata dominica.’
of services into *gavol* or *lage* services, part probably of the original *consuetudines firmae*; *ben*, or boon, or *filsing*, or *wine* services, rendered theoretically as a favour to the lord, *de amore* and not *de consuetudine*, and this third kind, surviving in the common *graserthe*, or ploughing rendered in return for pasture privileges.¹

A passage in the Bury custumal, a custumal full of references to gavol services, or *goveles*, gives an excellent example of arrangements that look like late elaborations of the *greserthe* principle, although the service is not here called *graserthe*. Every tenant of land except the free reaps one half-acre of grain if he have *averia*, and as many half-acres as he has cows, unless his cows lie in the lord's fold at the vigil of St. Peter. All the cattle of the tenant except his milch cows and ploughing oxen lie in the lord's fold. In addition, a quite separate rent of *thae* is paid for his swine.²

The ploughing appears again very clearly at Glastonbury; 'he shall have no ox in the pasture of the lord except those which he acquires by *grashurde.*'³ The custumal of Bleadon explains that two annual *graserthe* ploughings were 'invented' so that the lord, in consideration of the ploughing, should make no *winter hage*, winter hedges, on his land to keep out cattle.⁴ A similar explanation is given for the custom at

¹ See above under gavol.

² Harl. MSS. 3977, f. 82: 'Omnes qui tenent terram de domino exceptis liberis... debent metere pro porcis quilbet eorum dimidiam acram siliginis. Et omnes homines domini exceptis liberis debent metere pro vadiis dimidiam acram siliginis si habeant averia. Et omnes isti supra-dicii metent pro vaccis quot vaccas tot dimidias acras de frumento met' si autem vacca sit in falda domini in vigilia S. Petri non metet si domum remaneat (sic) metet ut predictum est. Si autem vacca eat in caruca per annum non metet pro ea. Omnia autem averia istorum exceptis carucariis bobus et vaccis lactantibus... iacebunt in falda domini... et pro quibuslibet v. berbiciis metet j rodam avene si unum tamen habeat metet unam rodam. Si excedat numerum v. metet dimidiam acram et sic deinceps usque in infinitum.'

⁴ Blead. Cust., p. 201: the customar makes two graserth ploughings, one before and one after All Saints: 'Et inventa fuit ista arura ita quod dominus nullum defensum facere deberet in hieme quod dicitur winter-
Pasting, a manor of St. Frideswide's. All the ploughs come on a day near Michaelmas at the summons of the reeve for the graserthe ploughing, 'racione quod dominus hagam nec pasturam separabilem faciet ab hominibus intra campum warectabilem; tantum hoc diem faciet et non amplius'. At King's Barton, Gloucestershire, the graserthe ploughing was commuted for a large rent of 20s. 10d.

In later times, however, the common forms of pasture rents were pannage for the agistment of pigs, herbage for the pasturing of all sorts of animals, and faldage for the folding of sheep and cattle.

Pannage was practically universal, except in case of special exemption, wherever and whenever there were swine to be fed on the demesne or the waste. The payment was made usually by villeins only, freemen having probably some wood-rights of their own, and being therefore independent of the lord's mast. Usually pannage was the return made by the villeins for permission to turn swine out into the wood, but very commonly there are cases where villeins had to pay pannage even when they kept their swine at home. In other cases the lord seems to have required that the villeins should agist their swine on his land whether they wished to do so or not. On manors of Ramsey, for example, the custom varied: sometimes, especially when nuts were plentiful, the villein paid pannage whether he drove his swine into the lord's wood or kept them at home, sometimes he paid it only when his haye contra averia sua in nullo loco super terram suam propter eandem arraram.'

2 Min. Acc. 850/10: 'Et de xxs. xd. de quadam consuetudine vocata garserthe ad idem festum.'
3 Ram. Cart. i. 287, 298, 309, pass., among the obligations of customary tenants. Worc. Vac. Roll, 1143/18 '... de pannagio porcorum custumariorum'; Glouc. Cart. iii. 217; D. S. P., pp. 6, 33, 37; Rot. Hund. pass.; Min. Acc. 742/17–20, 850/10; Durham Vac. Roll, 1144/1; Norwich Vac. Roll, 1141/1; Coventry and Lichfield Vac. Roll, 1132/5 (tallag. porcorum); Crondal Records, pp. 52, 76, 95; and commonly elsewhere. Compare Vinogradoff, Growth of Manor, p. 311: 'Customary payments of pannage for swine and cattle grazing on the waste, customs of so-called grass earth labour, fines for cutting down trees, and especially hunting and fishing privileges, are among the earliest manifestations of manorial lordship over tracts of waste lands, and, of course, they get more and more elaborate as cultivation and social progress increase.'
swine were *in nemore domini.* Again, the Hundred Rolls describe a Bedfordshire manor where once pannage was paid only when swine were turned into the wood of the lord, but where at the time of survey it was taken *per vim et extortionem,* even if the swine were kept at home. In this, as in other cases, unjust encroachments by the lord became in the course of time recognized as his rights and part of the custom of the manor.

For swine fed in the royal forest pannage was paid to the king, and from the obligation to pay it the king often granted immunity. The receipt of the royal pannage was an important part of the duty of the forest officers or agistors at the Martinmas *svainmote.*

Pannage was paid annually at Martinmas, according to the number of animals agisted. The ordinary rate was a penny for a pig over a year old, that is to say, a year old on the last Holy Cross day, a halfpenny for a half-yearling or for a pig just separated from its mother. Little pigs and sows were often free. This rate was usual on the manors of Gloucester, and in Oxfordshire, and on the manors of Abingdon, Lichfield,

9. Ashmol. MSS. 864, quoting Bl. Bk. Coventry, f. 5: ‘et dabit pannagium pro porcis suis scilicet pro qualibet porco unus anni *ib.* et pro porco infra annum *ob.* Et si habet decem porcos dabit unum porcum et tunc non dabit argentum pro alius infra decem sed si excedat decem dabit
Burton, Batt. St. Paul’s, Ramsey, and in Northumberland. In Shropshire and Wiltshire the rate was higher, 2d. a yearling, a penny a half-yearling; and in Ramsey, too, sometimes 2d. was paid for a yearling, a half-penny for a half-yearling, and a farthing for a little pig of three months. Battle Abbey tenants sometimes paid 2d. for pigs of ‘fullest age’, while for younger ones the amounts were graduated.

Other payments occur which were closely connected with pannage, or were probably the same payment under other names. Retropannagium, which is especially common in descriptions of royal forests, was the pannage paid for the agistment of swine after the termination of the ordinary season, that is to say, after Martinmas. Thac, which appears in St. Oswald’s letter under the form tace or swinessead, and which with ciric secott, toll, and the fulfilment of the law of riding made up the service of the riding men, still lingers in the thirteenth-century register of Worcester, but has become a mark of villeinage, paid usually by tenants holding under the old assize, and occasionally by those holding under a newer arrangement. When, however, land in villeinage was put at farm, the thac, with the thol or payment for selling animals, was usually compounded for with a money rent, merchet and

pannagium pro illis qui excedunt sed dicunt quod consueverunt habere suem matricem quietam de pannagio de gratia ballivi.’ Cf. f. 17: ‘et dabit grestakes pro porcis suis.’

the lord’s tallage alone remaining as distinctive marks of status. 1 Thae was paid according to the number of pigs held by a villein, and at the usual pannage rate; a penny for a yearling, a halfpenny for a half-yearling, the money being due at Michaelmas, and payment being enforced whether pigs were fed in the lord’s wood or not. 2 Once it seems to have been paid in addition to pannage. 3 At Bury it was paid sometimes in the form of the fifth or the tenth pig, like the garsanese. A villein’s father, we are told, paid thae (thaciabat) for his swine, ‘so that for all his swine he gave one, and he himself chose one, and the lord had the second.’ 4 The ‘thae of Westmore’ is mentioned in the roll of a Somerset manor, 5 and the older form is preserved in the tak porcorum of Northumberland, 6 and the tak of Hereford 7 and York, 8 and, in composition, in the Gloucestershire thisteltake, 9 the Cambridgeshire shepestopake, and the Staffordshire grestakes. 10 Thae-silver, found on the manor of Glatton, Huntingdonshire, 11 may be another form of thae, or perhaps, since no connexion is made with the villein’s stock, refers to some commutation of the service of thatching. The curious payments of Danger and Leafyfield or leavesilver occur in Kent, duties payable by the tenants for leave to plough their land in pannage time, between Michaelmas and Martinmas, when it was thought

that ploughing might be a danger to the lord's right of pannage.¹

Herbagium. The payment made for the pasturage of animals other than swine 'horn under horne'² on the demesne of the manor was called herbage. 'Agistment was of two kinds: first, the herbage of the woods and pastures, and secondly of the mast of trees; the latter was called pannage.'³ Herbage was, like pannage, an important source of revenue to the lord. Both payments are noted regularly, for example, in the receipts from the manors of Winchester, sometimes one and sometimes the other being the greater.⁴ Once in Winchester records the payment seems to have been made in sheep,⁵ not money, a survival of a custom resembling the old gaerswyn. For animals turned on the common of the vill as well as for those fed on the pasture of the demesne herbage was sometimes paid. Thus at Glastonbury the villata declares that the pasture ought to be divided into two parts, and the lord ought to have the half he chooses for his own uses, and the villata the other half. The lord may have his half in defence from Purification to Midsummer; the villata should pay a penny to the lord for every animal turned to pasture on its half.⁶ Sometimes, on the other hand, a certain number could be turned on the common pasture without payment by

¹ See Robinson, Gavelkind, p. 219: showing pannage in the weald to be a very important privilege and rent. A court was held once a year called curia legalis; with which compare the court of the Denes, and Kemble, i. 483. See also Robinson, Gavelkind, p. 214: 'by the custom of Droveden the lord was to retain all great oaks, ash, and beeches, and pannage on land of tenants in gavelkind. The tenants had underwood.' And p. 216. See Faust, A. 1, f. 43: for drofdenne and donger or danger; and Misc. Bks. Augm. Off., vol. 57, f. 15: 'pro Danger et lefield.' Cf. f. 82b.

⁵ ibid., p. 22: 'Et de xlvij. ovibus de consuetudine herbagii post partum et ante tonsionem.' See below under Lamselver.
the villein, while for all in excess of that number he must pay the lord. The rate of payment varied with the custom of the manor. On a manor in Oxfordshire one horse, six oxen, six pigs, fifty sheep might be turned into the common pasture with no payment except the pannage; for more than this number herbage was due.\(^1\) Common on Dartmoor was paid for at the rate of a penny for every work beast, \(2d\). for a horse, but it should have been paid for at the rate of only a halfpenny for an ox and a penny for a horse.\(^2\) In Abingdon there was given at 'faldrove' a penny for every yearling ox or cow, and a halfpenny for one that was younger: a penny for every ten sheep, a halfpenny for every nine sheep.\(^3\) On St. Paul's manors the rate was \(3\frac{1}{2}d.\) for every animal in the lord's pasture.\(^4\) A special payment was made to Peterborough for goats,\(^5\) because they injured the herbage.

The common terms for herbage rents in the east of England, especially on Ely and Bury manors, were \(coupenny,\) \(cupeny,\) \(cusilver,\) and \(busagium,\) \(bossing,\) \(bossingsilver,\) and \(bossilver.\) Bullocksilver and \(oxpenny\) also occur. \(Cupenny\) occurs with great regularity on Norfolk manors, and is sometimes described in detail. Thus in Brigham\(^6\) it was paid from a virgate at the following rate: one ox a penny, one cow a penny, one \(bovettus\) a penny, one \(juvenca\) of three years a halfpenny, unless she lie at the lord's fold. In Felton the rate was the same.\(^7\) The cattle of the villata pastured \(horum\) \(under\) \(horum,\) and a \(plena\) \(terra\) paid for a cow a penny called \(cupeny,\) for a bullock a penny called \(bullockpeny.\) Cottars and \(anilepimen\) paid at the same rate. The \(cupeny\) is mentioned also in Cambridge-

4 D. S. P., p. 51: 'Omnes... debent de pastura oviwm in estate dare jd. et in hieme pro x jd. et de singulis animalibus iij. ob. per annum si ad pasturam domini venerint similiter de equis et de singulis porcis jd. pro Garsavese.'
6 Claud. C. xi. f. 250: 'Summa de cupani per annum innumerabilis est quia quandoque plus quandoque minus.'
7 Ibid. ff. 254, 255, 257. Cf. f. 258.
shire and in Suffolk. In the Cambridgeshire instance the customary tenant enclosed for every cow one perch length of hedge around the crops, a service somewhat similar to which was performed on the Battle manor of Apuldreham in Sussex, where every cottar possessing a cow reaped and bound one half-acre of oats. On St. Edmund's manors celsiusilver, which is once written celsiusilver, was common, and oxpeni also occurred. In Wiltshire veal money is mentioned.

Busagium also was a payment connected with the pasturage of cows, but was paid more particularly, on a Ramsey manor at least, for the right on the part of the customary tenant to fold his own cattle. It was paid at the rate of a penny for a full-grown cow. The Ely bosing, bosingsilver, or bossilver seems to have been paid for the pasture of the cart-horse with which carrying service was performed. It occurs at Wisbech, Cambridgeshire, at the rate of a penny from a plena terra, and at Leverington at the rate of a halfpenny from those tenants of messuages that had horses and carts. It is possible, however, that bosingsilver may refer to some commutation of carting service. Bossilver occurs once.

1 Claud. C. xi, f. 64: 'De consuetudinibus censuariorum ... et si habeat bovem vel bovetum vel juvencam dabit de kupeni per annum pro qualibet unum obolium quam cicius aliquem dentem jactaverit et claudet pro qualibet vacca unam perticatam sepis ante segetis domini.' Cf. Ely Vac. Roll, 1132/10. The manors on which it is recorded are the same as those in the custumal.

2 Claud. C. xi, f. 310.

3 See above note and compare also Batt. Abb. Cust., p. 56: 'et quinque eorum (maiores cottarii) vaccam possideat debet pro vacca metere j acram avenae et ligare.'

4 Harl. MSS. 3977, f. 94, for 'oxpeni'.

5 Hazlitt's Blount's Tenures, p. 33.

7 Ram. Cart. i. 402: '... si habuerint vaccas, dant ad busagium unum denarium, et pro juvenca pregnantae unum obolum, et pro eo quod non jacebunt in falsa domini.' Cf. iii. 266.

8 Claud. C. xi, f. 80, 81: 'Si unusquisque tenens unam plenam terram dat de bosingsilver unum denarium.' Ely Vac. Roll, 1132/10: 'redd. voc. bosing, grippure shepестake.'

9 Claud. C. xi, f. 85: 'unusquisque predictorum mesuagia tenencium dabit de bosingsilver unum obolum (S. Mart.) ... si habeat equum et carectam.' Cf. f. 82.

10 Tiber. B. ii, f. 237.
Other pasture payments for cattle were *splotgabulum*, a Winchester rent on the manor of Walda, and *lesselver*, a rent found commonly on the Battle manor of Brightwalton, Berkshire, paid for every animal of two or more years on the feast of St. John Baptist. *Lactagium* was paid for the pasturage of cows on the manors of Bath and Wells, and *lacelsulver* at Abingdon. 4

Animals had to be guarded so that they might not injure the crops or wander from the manor, and this duty was performed either by regular herdsmen paid by villein contributions or by the villeins themselves in turn. 5 In Durham manors the guarding was called *hirsill*, and if it were not properly kept a penalty was attached, 6d. for a pig in the corn, 2d. for a duck astray. After St. Cuthbert’s day in March no one might allow his beasts to leave the vill without *hirsill*. 6 If beasts of strangers wandered on the lord’s commonable waste in Norfolk *resting Geld* was taken by the lord, and in Lanca-

1 Winch. Pipe Roll, 83, under *Purchasia*, with fines from certain tenants for breach of pasture regulations.
2 From the Anglo-Saxon *lues*, pasture. See Batt. Abb. Cust., p. 60: a *virgarius* should give the lord ‘pro quolibet animali aetate duorum annorum vel amplius ... ad festum S. Iohannis Baptistae unum denarium quod vocatur Lesselver.’ See Index, p. 165. It occurs also in the account rolls of the manor, e.g. 742/17: ‘de lesselver ad festum S. Iohannis hoc anno ijs. viijd.’ Again, 742/18-19.
3 Bath and Wells Vac. Roll, 1131/3: ‘de lactagiis scilicet de vaccis Episcopi defuncti pro pastura. Idem reddit compotum de lijs. xjd. ob. recepitis de lactagiis xxxj vaccarum Episcopi defuncti commorantium ibidem in pastura per xlj dies, videlicet de qualibet vacca per diem obolum pro pastura et custode earundem.’
5 Burt. Ch., p. 26; D. S. P., p. 105: ‘omnes isti ponunt faldam suam singulis annis super terram dominici ab hokedai usque ad advinca et habebunt ibi oves et omnia animalia sua. Et pro custodia cujuslibet averci dant Bercario domini iij ob. exceptis ovibus quas ipsimet custodiunt et pascentur in communi pastura domini a pascha usque ad festum S. Michaelis et si ita non custodiuntur non dabunt argentum.’ Rot. Hund. i. 35: land called ‘sceperdeslond’ held for guarding king’s sheep; ii. 745: cottar guards swine and has the ‘markinghog’. Cf. *herdershift* and *schepersulver*.
6 D. H. R., pp. 56, 59, 61, 74, 148, 167; 101: ‘Ordinatum est ex communi assensu quod quilibet eorum veniat ad preceptum prepositi ad ponendum freth’ hircill et omnibus alis ordinacionibus ad communem proficuum.’
7 Scrutton, Commons, p. 40; Blomefield, Norfolk, ix. 294: ‘Also he claims liberty of resting geld, of the beasts of any strangers resting one
shire, Cheshire, and Gloucestershire *thistletake* was paid for
beasts on the common if 'only as much as a thistle were
tropped.' 1 *Escapium* was 'money paid for beasts escaping
into forbidden enclosures.' 2 The forest proceedings show
large fines given for *escapium*.

*Drove* was probably the commutation of a service of driving
out the cattle of a village into pasture. 3 The commuted
service occurs in King's Barton, Gloucestershire, in a late roll,
which mentions also under *exitus manerii* 5 s. derived from
'drift' pullanorum'. 4 The 'forth drove' and *forth drovesilver*
of Ramsey should be compared with *drove*, the former represen-
ting probably the uncommuted form of the service. 5 With
*forth drove* should be compared also the *faldrove* of Abingdon. 6

In Kent 7 land was held by the service of driving cattle to
market or pasturage, and hence was called *droveland*. The
*drofmannus* was in charge of the drove. There was also on
night on the common of the said village, in shack time, or in the time
when the lands are enclosed of any tenant . . . And he hath also another
custom of resting-geld, that of all goods, chattels, things and merchandises
coming to land by sea . . . resting upon the land one day and one night.'

1 See above among pannage payments.

2 Rot. Hund. i. 135 (Yorks) the bailiffs take *escapium* 'videl. de bove
iijd. de equo iijd.' Cf. Sel. Pleas. For., p. 64, and Gloss., p. 141, quoting
Duchy of Lancaster Forest Proceedings: 'Tota campania infra metas suas
est in defenso per totum annum; et similiter Eydal'; ita quod nemo
habet communam nec accessum in eadem cum aeriis. Et si aeri vel
animalia ibidem uenerint per escapium, dabitur pro eisdem, videlicet,
pro affro ij den' pro boue j den' et pro quinque ouibus j den., etsi hec
invenientur bis infra duo placita attachiamentorum foreste, quod si tercio
invenientur infra duo attachiamenta tunc debent appreciari ad opus regis,
uidelicet, affrum prout valet, bos ad sex solidos, vacca ad quinque solidos
et reliqui aeriis (sic) minoris precii ad quatuor solidos et reliqui
aeriis infra duos annos ad duos solidos; et ouis ad xij den'; et porcus
superannatus ad xij den'. 7 (Duchy of Lanc. For. Proc., Bundle I, No. 5,
Roll 15 d.)

Glaston.' And p. 44: 'quoddam iter quod vocatur Drofwei.' Compare

herdsman.

6 Abing. Acc. ii. 391.

drofdenne et donger.'
Winchester manors the payment of *innynge* or *innedge* money, an annual rent for turning the cattle into the 'hams' or meadows when other pastures were under water.¹

**Faldagium.** The payment made for the folding of sheep, and sometimes of cattle also, outside the lord's fold was usually called *faldagium.* At Abingdon *faldgabul* occurs,² with which should be compared the *oxfoldgable* of Southampton.³ Regulations regarding the folding of sheep, the old *soca faldae,* are often described in detail in the custumals, and large receipts derived from faldage payments are entered in the bailiffs' accounts. The distinction implied in Edward the Confessor's writ still held,⁴ and the obligation to have sheep at the lord's fold was considered a mark of villeinage; men that folded their sheep at the lord's fold, that is to say, were usually villeins, although not all villeins were subject to the restriction. From this point of view faldage should be included among the condition payments.

The account in the Ramsey custumals of the faldage requirements is unusually full. If a villein had but one sheep he might keep it at his own fold, if he had many, more than six, he must put them in the lord's fold.⁵ The sheep of cottars and strangers,⁶ and in St. Ives, of strangers and of those that had no land in the Vicus Pontis, the chief street of the fair, were kept at the lord's fold.⁷ In Girton both those that had land, and those that had not,⁸ used the lord's fold from Hoke-day to Martinmas. The abbot's fold was moved constantly

² Abing. Acc. App., p. 143: 'Of faldgabul nothing because no fold.'

⁵ Ram. Cart. i. 416: 'Ponet in fald domini Abbatis omnes bidentes suos, si plures habuerit, et Abbas inveniet custodem ad custum suum,' and ibid. i. 419. Cf. iii. 267.

⁷ Ibid. i. 284.

⁸ Ibid. i. 495.
from place to place, and the maintenance of it was part of the labour service of the villeins.¹

Interesting faldage regulations regarding cattle as well as sheep are common in Eastern England and Kent. Thus, in a Canterbury manor sheep fed in a common pasture called ‘tunnannemers’, and in the marsh, were kept at the lord’s fold from Hokeday to All Saints, and all oxen and cows were paid for;² and in an Ely manor in Norfolk a plena terra gave for faldagium for every ox a penny, for every sterile cow a penny, for every juvenca of two years a halfpenny, and for every five sheep a penny, and by reason of this payment neither sheep nor other animals were required to lie at the lord’s fold.³ The Glastonbury faldicium was paid for cattle and for sheep.⁴ The faldagium payment for cattle seems to be equivalent sometimes, as has been said, to busagium.

A few other payments connected with the keeping of sheep appear in the customals and elsewhere. In Kent a lamb peni, lamselver, or langabulum,⁵ is fairly frequent. It seems to have

---

² Add. MSS. 6159, f. 187: ‘Item est ibi pastura communis que vocatur tunnannemers et omnes oves que pascantur in illo marisco . . . ’ are to lie at the lord’s fold from Hokeday to All Saints; and so also all oxen and cows, for which a payment is to be made of 2d., but 1d. for a bovetus.

³ Claud. C. xi, f. 225: faldagium is given ‘pro bobus boviculis multonibus et hogastris suis et pro qualibet juvenca etatis duorum annorum’; f. 229: faldage is paid ‘et ideo nec oves nec alia averia sua jacere debent in falda domini’; and f. 244. Cf. Harl. MSS. 1005, f. 71: ‘Nota quod quilibet potest habere faldam de animalibus ita scilicet pro qualibet animali duorum annorum et amplius debet id. domino vel iacebit in falda domini exceptis animalibus liberorum hominum preter R. . . . qui debet habere in falda domini iij boves pro omnibus animalibus suis.’

been the commutation of a rent in kind of two lambs, which the lord collected from the houses of the 'sullmen' on St. John Baptist's day, or elsewhere of one lamb from a sulung, commuted for sixpence. At Ramsey a rent was paid de separa-
cione agnorum.\(^1\) Lambs were paid at Norwich and Worcester also,\(^2\) probably as pasture rents resembling the gaerswyn, although they may be parts of an old food-rent. Once a similar rent of sheep de herbagio was collected on a manor of Win-
chester,\(^3\) with which should be compared the rent on Ramsey manors of wethersilver, or the penny ad arietem,\(^4\) for supplying a wether to the flock, a rent occurring again at Kettering, Northamptonshire,\(^5\) and on Glastonbury manors,\(^6\) where either a penny or a lamb was given on Hokeday. A rent called shepestake is found on the Ely manor of Wisbech, in Cambridgeshire, probably a pasture rent, like thisteltake, in the north.\(^7\) On the manors of Bury shepsilver, or schepsilver, was common at the rate of a penny for six sheep, or, once, for eight sheep.\(^8\) In Norfolk it was sometimes the custom to pay herdershift for the maintenance of the shepherd,\(^9\) and in

\(^9\) Blomefield, Norfolk, ix. 204, Eccles: 'He also hath other custom, heweschift, reveshift, hirdeshift, ingeld felsne, and bedgild. Herdershift,
Norfolk and Suffolk the lord had sometimes the right to 

shack,¹ or 'the liberty of feeding his sheep at pleasure on his 
tenants' lands during the six winter months'.

In addition to payments directly connected with pasture, 
the lord of the manor derived certain other profits from the 
woodland and waste. The most important of these rents were 
connected with the estovers taken by the villeins, especially 
the common heybote and housebote. Housebote was the taking 
of wood for the repair and building of houses, and is used to 
denote both the privilege and also the rent paid for the 
privilege.² On the manor of Wye in Kent the appearance of 
housebote among a villein's obligations was regarded as a sign 
of villeinage. Three juga and a virgate which were free were 
yet held by the same rent as servile tenements, except that 
they did not carry, housebote (husbotant), or brew, 'which seems 
remarkable,' the extent goes on to say, 'since each pays 7s. 5d. 
in the manner of those that carry.'³

Heybote or hedgebote was the villein's privilege of taking 
hedging material (heyningwode and the like) from the demesne 
and waste, and his payment for the privilege.⁴ Heybote was 
especially common in the West of England, and occurs also in 
Wales.⁵ It should be distinguished from heggingsilver, and 
heywodesilver, the commutations of the service of setting 
hedges and collecting hedging-material for the lord. Occa-

whereby the whole homage ought every year to choose one shepherd for 
whom they ought to answer,' cf. D. S. P. p. 105, and schepersulfier.

¹ Charnock, Man. Cust. Essex, p. 7: 'In the former county (Norfolk) 
shack extended to the common for hogs in all men's grounds from harvest 
to seed time, whence to go a-shack is to feed at large; and in New 
England shack is still used in a somewhat similar sense for the food of 
swine, and for feeding at large in the forest.'

² Rot. Hund. i. 14, 21; ii. 336, 838; cf. Dugdale, Antiq. Warw. ii. 911: 
Sutton: heybote and housebote are 'secundum quantitatem tenurae per 
visum forestariorum et woodewardorum temp. Quad. sufficienter pro haillis 
et domibus emendandis super bondagii tenura'.

⁴ Rot. Hund. i. 14, 21; ii. 336, 838. Kennet, Par. Antiq. i. 295; ii. 137. 

husbote ad aulum suam de bosco domini et haybote similiter sine vasto 
per liberacionem ballivorum et debet habere wdetale contra Natale . . . et 
debet habere wenbote.'
sionally other *botes* are mentioned, for example the *cartbote* or *evenbote*, the *ploughbote*, and the *firebote*, the taking of wood for the carts, the ploughs, and fuel.

Other rents were paid by the villeins for the use of special bits of meadow or other lands. A rent for a meadow 'halew' occurs on the Ramsey manor of Hemingford Abbot's; *medsilver* occurs in Kent, and *medweselver* in East Anglia. *Medgavel* and *brechegaval* were probably similar payments made at Glastonbury for the use of meadow and *breches*, or for haying services. The Ramsey *hangerlondsilver* was probably paid in years when a certain piece of land was sown. The word *hangra* has been taken to mean a wood on a hillside. A passage in a Wistowe account-roll records the omission of the rent in a given year 'because it (the hangerlond) was not sown', and the payment of the rent in years when the land was sown.

Side by side with the rents paid for the pasture of cattle and other animals and for special privileges, may be placed the rent paid on houses, although perhaps it might equally well be considered in connexion with the *landgafol*. The common *hawgafol*, or house rent, of the towns does not occur by name in the rural districts of England, but there is a rent recorded for the Ramsey manors in Huntingdonshire which looks very much like it, the *heuschire* or *heusire* of the

CHAPTER IV

CONDITION RENTS

A GROUP of rents of great interest in illustrating the tests in common use to determine a tenant's probable freedom or unfreedom are the condition rents, the liability to which was considered as generally indicative of villeinage, as establishing at least a presumption in favour of villeinage. Professor Vinogradoff has treated these rents very fully, and has shown how they, with other liabilities and obligations of villeinage closely allied with them, are evidence of the 'state of fermentation' of the 'whole law of social distinctions'. Two questions, he says, might be asked in cases where a man's status was to be determined: one regarding the certainty, or uncertainty, of his services to his lord, the other regarding the kind of services he owed. Sometimes one, sometimes the other was asked, and it is in the answers to the second that the most important references to the group of rents in question occur.

The usual disabilities of the villein thus enumerated to prove villein status were: first, his obligation to pay merchet or vedfee, or gersuma when his daughter was married, sometimes also when his son was married, leirwite and childwite, fines for incontinence on the part of his daughter, and heriot, the ancient payment which went back to the surrender of a man's heregeat to his lord, and was the payment on the person analogous to the relief on the land paid by military tenants; secondly, his obligation to pay a tallage to his lord, usually at his lord's will. Less common, but still fre-

1 Vill. in Eng., pp. 153-4, 82, 83.
2 Bracton, i. 681: 'There is another kind of payment which is called a heriott, and which has no comparison to a relief, to wit, where the tenant, free or serf, on his death remembers his lord from whom he holds, remembers him with his best beast, or his second-best beast, according to the custom of the country, which gift indeed is rather made of grace than of right, and which does not affect the inheritance' (ed. Twiss, Rolls Series).
CH. IV]

CONDITION RENTS

quent, was his obligation to pay a toll on the sale of his animals (tonnutum, thol, stuch), which was often coupled with merchet. Other tests of status were the obligation to pay the Christmas hen and the Easter eggs, to serve as messor or reeve, to fold his sheep at the lord's fold, to grind at the lord's mill, and also his subordination to certain regulations regarding the cutting of trees, the tonsure of his sons, the withdrawal from the dominium of his lord, and the succession to land. On Gloucester manors 'consuetudines non taxatae quae ad terram suam pertinent' generally implied villeinage.

While it may be said that the occurrence of such rents, services, and disabilities in the descriptions of a man's position certainly established a strong presumption against his freedom, yet, as Professor Vinogradoff has shown, none of these obligations alone, not even merchet, the most significant, can be taken as a final test, or one of universal application, both because they may fall, in exceptional cases, on freemen holding freely, and also because they occur very irregularly in different localities, varying, for example, in two hundreds of the same county lying side by side. The fullest lists given in the Hundred Rolls are for Huntingdonshire, but frequent references to them occur in the rolls of Cambridgeshire, Norfolk, Suffolk, Lincolnshire, Oxfordshire, and Buckinghamshire, and the church customals show the tests applied in other places.

Of the three most common condition rents, heriot, merchet, and leirwite, heriot was probably the least characteristic as a test of villeinage, because it was paid in a fairly large

1 See Ely, Extenta Maner. for good lists of such restrictions.
2 D. S. P., p. 157*: 'vel arbores in haiciis suis extirpaverint vel succiderint sine licencia.'
3 For example, Reg. Worc. Pr., pp. 15 a, 83 b; Vill. in Eng., p. 156; Rot. Hund. ii. 722.
4 Extenta Maner., Ely.
5 Ibid., and Vill. in Eng., p. 156.
7 The reverse is sometimes true, and villeins pay rents that are generally characteristic of free tenure. Thus customary tenants in some cases pay scutage. See, for example, Rot. Hund. ii. 414, 417, 419, 458, 558, 563, 580, 709, 784, 814, 815, 817, 849, 865.
number of cases by men who were not villeins. It was paid
by a freeman,\(^1\) by a tenant who held land by charter,\(^2\) or
even by sergeancy.\(^3\) It was often paid by the tenant of land
\textit{ad censum},\(^4\) and it was occasionally paid simultaneously with
relief.\(^5\) It consisted sometimes of the payment of a horse, or
saddle, or sword, or lance.\(^6\) The ordinary \textit{heriot} from the
ordinary villein, however, was the best plough-beast or cart-
horse.\(^7\) Sometimes the vicar received the second-best beast
when the lord received the best beast.\(^8\) Occasionally the
lord did not take the \textit{heriot} at once, but left it to the wife
for thirty days after her husband’s death, to be rendered to
the lord intact at the end of that time.\(^9\) A curious passage
in the description of Sutton in Warwickshire shows a con-
fusion of \textit{heriot} with feudal aids. After the death of his
customary tenant the lord was to have in the name of heriot
his best animal, ‘and not more’. ‘Neither goods nor chattels,
neither during the man’s life nor after his death, were to be
taken, except only on the marriage of the lord’s eldest son
or daughter,’ on which occasions the lord may have, if he
will, the third of the goods of those dead ‘before the admin-
istration of the executors’, and the half of the goods of the
living, saving the necessary wainage.\(^10\)

Especially in the later records the heriot was often com-
muted for money, and there seems to have been a general

tendency to value it at 32d. or 2s. 6d. Occasionally it was heavier. Sometimes a year's rent was paid in place of a fixed sum, an arrangement which seems to connect itself rather with the fine for ingress on the part of the heir than with the original heriot. The fine for ingress and for egress is described in cases where a tenant could depart from his land, or take up other land; thus onfære and offære were paid at Ely by a free tenant who still paid heriot. The provisions regarding the maintenance and remarriage of the widow of the deceased villein are various. They are described in detail in the Ely extent roll.

Merchet was more generally characteristic of villeinage than heriot, and yet it, too, was occasionally paid by free-men. Thus the thegn in Northumberland paid it, and also free tenants by military service of Durham. The statements regarding it differ very much in different localities. In the west the phrase 'redimere filios et filias' is common, and sometimes in the east too the fine was paid on the marriage of sons as well as daughters, or on the withdrawal of sons from the land. In the east gersuma usually appears for merchet. Different regulations were often in force for marriage inside and outside the lord's liberty. For marriage within the liberty there was usually no fee, but permission from the lord's bailiff was necessary. In Kent, if a tenant

wished to marry his daughter to any one within the vill he informed the *custos ville*, and asked him to be present. If he wished to marry her to any one outside the vill, or if his daughter were his heir and he wished to marry her to any one whomsoever, he procured the lord’s permission.\(^1\) In Hertfordshire if a tenant married his daughter to a freeman within the vill, merchet was paid.\(^2\) The fee for marriage between villeins within the vill, when it was exacted, was usually 16d.; for marriage outside the vill it was 32d., or the best arrangement possible with the lord.\(^3\)

The *leirwite* commonly mentioned with the *merchet* fine was sometimes fixed,\(^4\) occasionally left at the will of the lord.\(^5\) In the east, especially in Norfolk and Suffolk, it seems to have been identified with *childwite*.\(^6\)

*Tallagium* or *auxilium custumariorum*. The tallage or aid of villeins taken at the lord’s will, a rent ‘on the border-line between personal subjection and political subordination,’\(^7\) was almost as common an indication of villeinage as *merchet*, and was more burdensome. Liability to be tallaged at the lord’s will was not, except in rare cases, consistent with freedom.\(^8\) The tallage was paid annually—as a rule, at Michaelmas. The usual assessment was made on the land or chattels of the tenant, and the rate was variable and dependent on the lord’s

\(^1\) Cust. Roff., p. 2: ‘Si quis autem in predicta villa maritare voluerit filiam suam alicui de ipsa villa, tantummodo ostendet illud custodi ville et rogabit eum ut veniat ad nupcias et maritabit eam sic. Si quis vero filiam suam extra villam dare voluerit, non licebit ei hoc facere nisi per licenciam et voluntatem domini sui. Similiter si quis habuerit filiam heredem vel filias, non poterit eas maritare infra villam nec extra nisi per licenciam et voluntatem domini sui.’

\(^2\) Claud. C. xi, f. 160; ‘Si . . . filiam suam maritare voluerit alicui consuetudinario domini in ista villa tunc non dabat gersumam pro ea nisi maritaverit illam alicui homini libero sive alicui de alieno feodo.’

\(^3\) Claud. C. xi, f. 176; Ram. Cart. i. 472, 384: ‘Dat merchetum pro filia, sicut melius finire poterit, ita tamen quod non excedet summam quinque solidorum, sive maritando fuerit infra villam, sive extra.’

\(^7\) Vill. in Eng., p. 162.

\(^8\) Rot. Hund. ii. 528, 530, 619, 620, 621, 623, 642, 651, 657, 705, 717, 823, 829, 830, 832, 844, *pass.* In Claud. C. xi, f. 127, the free land from which it is due was once *operabilis.*
Another method of assessment was probably on the
vill as a whole, an arrangement having been reached whereby
the villata paid a given sum, a mark or a pound, to the lord,
called the *commune tallagium*, the distribution within the vill
being left to the members of the villata. The payment thus
made to the lord is not always easy to distinguish from rents
like the *fulstingpound* or *witepund*, which were of quite
different origin. The *marceselver*, *custumpand*, and the curious
*tunnus census* of Bury St. Edmunds, for example, may belong
to either class.

On the manors of Gloucester the customary tallage, since
it was paid at Michaelmas, was called sometimes ‘the aid of
St. Michael’. The rate was high compared with that of
other customary payments, and the amount derived from
a single manor was sometimes large, as much as £4, or 102s.,
or 8 marks. The assessment was usually based upon the
number of animals held by the villein and the amount of his
land. Thus the virgaters ‘paid in common, each according to
his land and the number of his animals’, for a horse, an ox, or
a cow a penny, for a yearling ox a halfpenny, and for four
sheep a penny. Again, it is stated that if in the ‘taxatio’ of
the aid he have concealed an animal, the villein can be forced
to take the oath, and, if convicted on the witness of his
neighbours, he can be punished at the will of the lord.

Sometimes the rate for a virgate is given, the amount being
a penny an acre or less; sometimes, on the other hand, the
total sum owed by the manor is stated, to which the customary
tenants are said to give ‘in communi’. The aid was paid by

1 Glouc. Cart. iii. 88, 97, 100, 103, 110, 119, 121, 124, 149, 158, 167, pass.
2 Ibid. iii. 88, 97, 104, 119, pass. The lists of amounts given, iii. 104, may
be compared with those given in the descriptions of the manors.
3 Ibid. iii. 53: ‘Et dabit auxilium secundum quantitatem terrae et num-
erum animalium.’ Cf. pp. 50, 57, 62, 180, 185, 188, pass.
4 Ibid. iii. 182.
5 Glouc. Cart. iii. 208: ‘et si impositum fuerit eadem quod in taxatione
auxilli aliqual animal conceleaverit, potest cogi ad sacramentum prae-
standum, et se super hoc purgandum, et si per vicinos suos convictus fuerit
super hoc, puniturus est pro voluntate domini.’
6 Ibid. iii. 100, 101, 110, 121, 129, pass.
7 Ibid. iii. 97, 133, 191, pass.
the customary tenants generally, and occasionally by the censuarius or tenant of ‘peniland ad vitam et ad voluntatem domini’.

It was not paid from land that had been bought free, and was sometimes permitted to lapse on account of the poverty of the tenant. The aid from free tenants sometimes mentioned was apparently paid on special occasions, ‘quando currit’; the customary tenants, on the other hand, were responsible ‘quodam servili obsequio quod auxilium abbatis nuncupatur’. It was paid beyond question to the abbot, and was called ‘abbot’s aid’ in order to distinguish it from auxilium vicecomitis, which was also common, and which went to the abbot only if the franchise were in his hand.

The evidence regarding the manors of Worcester Priory points also in the same direction of an annual aid collected by the prior from the customary tenants. Here too the time of payment was usually Michaelmas, although an aid paid at other seasons is occasionally mentioned—the aid at the feast of St. Andrew, or at Christmas, or at Purification. The aid when paid at Purification may have been the same as the ‘Pukerekseschild’. On Worcester manors too the aid was due almost exclusively from customary tenants, and is often enumerated with thac and thol ‘et hujusmodi’ as a sign of villein status. It is interesting to observe that the auxilium, like thac, thol, or fisfe, is common in the older assizes: in the

new assize the payment is sometimes commuted in the
general rent from the land even in cases where *merchet*
remains.\(^1\)
The manner of assessment and the rate are not
clearly stated. It was probably called *auxilium prioris*,\(^2\)
and there is no indication that it was not like other payments paid
regularly to him. There is reference also to a special aid
which the abbot might have on his installation, and a state-
ment that the abbot might demand an aid when he was
heavily indebted to the king,\(^3\) but from the regularity of the
incidence there is doubt if the abbot or prior waited for times
of special stress for its collection. In a vacancy roll of the
end of Edward I's reign the *auxilium* or *tallagium custu-
mariorum per annum* is entered with great regularity, some-
times under the title *commune tallagium*, which points probably
to a payment by the vill as a whole.\(^4\) The sums range from
9s. in Paxford to £4 in Ripple. It was usually paid at
Michaelmas.

The Ramsey evidence agrees in the main with the fore-
going. In the thirteenth-century extents\(^5\) of most manors
there is mentioned a tallage, or aid, or geld paid to the
abbot.\(^6\) It is spoken of as the monk's tallage,\(^7\) or annual
tallage,\(^8\) or the tallage or aid at the feast of Saint Michael,\(^9\) or
on Cambridgeshire manors as *monkgeld*,\(^10\) and was occasion-
ally paid at two seasons, at Easter as well as Michael-
mas, *pro voluntate domini*.\(^11\) A mark given at the feast of

St. Andrew in addition to tallage is once mentioned. The amount is rarely stated; once it reached £4, on one or two manors the rate seems to have been 13d. or 12d. a virgate, sometimes it was paid 'ad voluntatem domini'. The manner of assessment, in the two cases where it is stated, was according to the number of animals and chattels, and the amount of land held. Here as elsewhere the tallage was evidently a servile custom, rendered by virgaters, cottars, and crofters, and very rarely by those that held by money rent. The general impression gained from the instances of its occurrence is distinctly that it was paid to the abbot, rightly or wrongly, every year, although the phrase in one or two extents is: 'Whenever they, the customary tenants, are tallaged.' One passage points to its being considered distinctly a grievance, and the fact that it is rarely mentioned in earlier extents may possibly indicate a recent origin, or at least an extension of an ancient privilege. It is mentioned first in the vacancy rolls of the earlier half of the thirteenth century, printed in the chartulary, where it appears among the large regular receipts of the royal custodian of the abbey. In 1211-1212, £88 16s. 8d. was collected, some manors which were put at farm being excluded; in 1254-1255, £71 16s. 'de tallagiis villanorum per maneria.'

On the manors of St. Paul's no payment that can be surely identified as an annual tallage taken by the lord occurs. A manor in Surrey paid every year an auxilium of a marc, at

12 Ibid. iii. 215.
13 Ibid. iii. 12.
the rate of something less than a penny an acre from the land of censuarii as well as demesne land, and this may possibly be the tallage or aid of other localities. It seems more likely, however, that this payment and the donum at Sutton in Middlesex are occasional payments like the 'auxilium Regis' and the census paid post festum Sancti Michaelis by censuarii and operarii at Horlock and Waleton in Essex. In the later Articles of Visitation of Manors, a document printed near the end of the Domedays of St. Paul's, an inquiry is made as to those that are liable to tallage at the will of the lord.

In Peterborough and Winchester documents also the reference to the customary auxilium is doubtful. On Peterborough manors the villein paid 'de consuetudine' a certain sum of money to the lord, at Pihtesle, 5s. at Christmas, 5s. at Easter, and 32d. at the feast of St. Peter; at Esctone, 5s. before Christmas and 5s. at Easter. At Collingham £4 was rendered de gabulo, and no hens or eggs were paid. In the Winchester Pipe Rolls an auxilium, a tallage, and a gabulum are all mentioned, but without very clear definition of any one of them. The gabulum was probably, however, the land-gabulum and other fixed rents put at farm, and the tallage was perhaps a royal payment, since its place was once taken by scutage. The auxilium was possibly the customary aid, but may have been an occasional levy. Clearer references to the tallage occur in the account rolls of other churches. The juga of Rochester paid 'scot' ad donum domini ville and for the service of the lord king: at Exeter the auxilium nati-

11 Cust. Roff., p. 4: 'De omnibus decem jugis debent scotare ad donum domini ville et ad servici um domini Regis.'
vorum is mentioned, \(^1\) at Durham the tallage of the bondi; \(^2\) at York the tallage of the bondi or of the villani; \(^3\) and at Norwich the common aid or auxilium custumariorum. \(^4\) On Ely manors both regular customary tenants and molmen were ‘talliales ad voluntatem domini’, \(^5\) and on the manor of Fleet in Lincolnshire both molelond and werklond gave auxilium. \(^6\) The tallage on ancient demesne manors must of course be distinguished from the ordinary tallage. \(^7\)

Next in importance to the heriot and merchet payments and the tallage were the tolls paid by villeins on the sale of their live stock or ale. The lord was nearer than other men in the matter of purchase, as the phrase went, and had the right to the refusal of the animal or article to be offered for sale, and sometimes the right to purchase it at a low rate. The villein, perhaps originally in recognition of this right of the lord, often paid a toll for permission to sell. Sometimes the restriction on sale was confined to animals of the villein’s own rearing, or malt of his own making, or to the animals with which he actually ploughed or carted. \(^8\) The tax on the

Hund. ii. 463: ‘... si ipse habeat pullum, vel bovicum et tamen laboraverit cum illo non postes vendere sine licentia
 sale was called by different names in different localities. At Worcester it was coupled with *thac* and called *thol*, at Gloucester it was called *tonnutum*, at Burton it seems to have been called *stuck* or *stud*. Usually it is called by the general term *theoloneum* or *toll*. The toll most often mentioned is that on animals, but there are many references to the tax on brewers, discussed already under *maltsilver*. A curious passage in the Glastonbury Inquest of 1189 points to a counter privilege on the part of the lord.1 If he wish to sell his corn the men of the manor must buy it or give the lord 20s. In Maldon in Essex a *toleray*, *totteray*, or *tolltray* was paid by the tenant for every bushel and a half of corn sold.2

The Worcester records give a number of details concerning the *thol* payment. It is defined as follows:—‘Thol, quod dicitur, Theoloneum est, scilicet, quod habeat libertatem vendendi in terra sua.’3 It included the selling of beer as well as animals, being, in this case, the same as the *alctol* or alepenny of other localities. The rate is stated several times; at every brewing a penny was given, or four or six gallons, in ancient times twelve gallons; for a horse sold a penny, for an ox or a horse a penny, for an ox a halfpenny, for pigs one year old a penny, of less age a halfpenny.4 The payment is more frequently mentioned in the old assize than in the new. In Gloucester the *tonnutum* was paid at a somewhat higher rate—for beer a penny or the equivalent at a brewing, for buying or selling a horse 4d.5 No Ely villein could sell an ox or *stott* without permission.6 On Ramsey manors the

5 Glouc. Cart. iii. 50, 62, 79, 117, 121, 125, 127, 134, 140, 151, 195, 197, 212.
6 Ely, Extenta Maner.
same rule held, but sometimes nothing was paid for the permission; and, in one case, an ox might be exchanged for a cow in the same vill, without permission. The payment depended somewhat on the time of year. Thus, if a pig were killed or sold before Purification a halfpenny for lost pannage was paid; if between Purification and the Gules of August, nothing was paid. Even the hour of the day at which the swine were sold sometimes made a difference, especially at Martinmas.

The *stuck* payment of Burton is not clearly defined; it probably refers to status, and was an annual rent, not paid on occasions.

Other common restrictions on villeins were the obligations to fold at the lord’s fold, which has been discussed under the pasture rents, to grind at the lord’s mill, to bake at the common oven, and to serve as reeve or in some other manorial office. The *multaire* payment made for grinding at the lord’s mill, and the prohibition from grinding elsewhere, were especially common in the north of England. Whether or not a tenant could be held for suit at the lord’s mill was a fairly frequent source of litigation, and provisions had to be made

1 Ram. Cart. i. 437: ‘Nullus praedictorum vendere potest bovem suum, vel equum masculum, sine licentia domini vel ballivi. Nihil tamen dabit pro licentia habenda. Sed excambiare potest bovem pro vacca sine licentia domini, infra villam.’
2 Ibid. ii. 37, 48; i. 335: ‘Post festum S. Michaelis porcum suum vendere non potest sine pannagio prius dato;’ Rot. Hund. i. 629: ‘Et si vendat vel occidat porcum de etate iij quart anni et amplius inter Gulam Augusti et Purificacionem dabit abatti pro pannagio obolum;’ Harl. MSS. 3977, f. 98.
3 Ram. Cart. ii. 43; i. 309: ‘Die autem S. Michaelis, ante nonam, sine licentia et calumnia domini, de porcis suis pro voluntate sua potest disponere et post nonam nequaquam.’
4 Burton Ch. 66 n.: The cause lost in a case relating to status because the jury found that the defendant owed a yearly rent, sometimes more, sometimes less, called *stud*. Again, in a similar quarrel a man admits that he is a nativus, holding at will, and giving *stuck* every year and merchet, and, on account of ancient customs, poultry rents.
against the maintenance of millstones by private persons who took toll for grinding the corn of their neighbours.\(^1\) The lord's profit from the mill, excluding the ordinary payment made by villeins to the miller for his services, is called the multura, or moltura, or molta.\(^2\) It was paid as a rule as a percentage of the corn ground, the tenth, thirteenth, sixteenth, or twentieth \(v\)ar being given, or every four-and-twentieth grain, 'according to the custom of the land and the strength of the water-course.'\(^3\) Occasionally the multura is stated in money.\(^4\) Sometimes no multura was charged on corn grown on a villein's own land and used for his own consumption. In Brawby, a manor of Hexham, for example, the tenants ground at the prior's mill and paid multura, yet they could make the corn and oats growing on their own land into malt without paying the toll called \(kyn\) multura. If any one bought any barley or oats for this purpose, however, he paid multura to the twentieth \(v\)as.\(^5\) In Worcester, too, malt ground and brewed for private use paid no toll.\(^6\) In Shillingdon, a Ramsey manor, every villein owed suit at his lord's mill. If the mill or mill-pond were broken, or if between the Gules and Michaelmas he took his corn to the mill and could not get it ground, he could grind it where he would. If, however, he were convicted of not making suit when he should, he gave 6\(d\). before judgement, 12\(d\). after it. He ground his corn thus throughout the year, but he gave a toll for multura only at Christmas and Easter.\(^7\) If he

\(^1\) Sel. Pl. in Man. Courts, p. 47: Two tenants of the abbey of Bec are convicted by inquest of the court of wrongfully having millstones in their houses and taking toll and multura to the great damage of the lord as regards the suit to his mill. Therefore be they in mercy and it is commanded that the said millstones be seized into the lord's hands.'

\(^2\) Winch. Pipe Rolls, Gloss.; defined as payment for not grinding corn in the lord's mill.

\(^4\) Winch. Pipe Roll, p. 78.

\(^5\) Hexh. Pr. ii. 143, 144; Feod. Dun., p. 2 n.: 'Et ut molant sine multura de propriis bladis suis quae crescent in terra illa.'

\(^6\) Reg. Worc. Pr., p. xi.

\(^7\) Ram. Cart. i. 464, 473; ii. 29. Cf. D. H. R., p. 111; Bold. Bk., p. 572; Burt. Ch., p. 76; Newmin. Ch., pp. 86, 87; Hexh. Pr. ii. 43; Cock. Ch. ii. 173.
bought his corn he might grind it at the nearest mill. An order of precedence in grinding is described in the Durham Feodary, which perhaps explains the *foregrist* of the Domeday of St. Paul. At Worcester there was in the manor of Bradewas a mill to which the *sequela* of three vills was attached. The ‘persona’ and heirs of one Alan had multure next after the Prior, and the lord of *suckel*, or some one to whom he assigned the right, had free multure also. The barley of all following the mill was free of toll, unless the ale made from it were sold. If it were sold, the person, free or forinsec, who followed *de gratia* gave a penny or four gallons, a villein 2d., that is a penny or four gallons for multure, and a penny or four gallons for *theoloneum*. All except the *persona* aided in carrying millstones, the prior furnishing the cart, the man, and two oxen.

Regulations with regard to the baking oven of the villata are less common and clear. At Durham and elsewhere there was a common *furnus*, and also often a common *forgium*, in a vili, for which the villata paid an annual sum, and which it kept in repair. The rent to the king from ovens in the demesne is one of the articles of inquiry in certain hundreds in the Hundred Rolls; the *furnus* was evidently a regality not yet always surrendered.

A liability of villeins, regarding which the custumals have much to say, was the obligation to serve in manorial offices. The provisions regulating this service are of interest in show-

---

2 D. S. P., p. 76: ‘In eodem molendino curia canonicorum habet foregrist sed dat molturam.’
3 Reg. Worc. Pr., p. 32.
5 Rot. Hund. i. 25, 26 (Bucks): ‘Et plura sunt ibi furna set nesciunt nomina tenencium ipsa furna.’ Other tenants pay the king a money rent for a *furnus*; and i. 402 (Linc.): ‘Dicunt quod episcopus Linc’ aliter usus est libertate quam predecessores sui facere consueverunt eo quod distrinxit pistores ville ad furniandum ad furnum ipsius episcopi sibi appropriatum.’
ing the subdivisions and gradations in importance among the customary tenants, the more important villeins being probably exempt from the less important offices, and also in occasionally throwing a little light on the manner of collecting rents, on cases of exemption from ordinary dues, and on the possibility of common action on the part of the villeins in avoiding an unpleasant burden. The total number of manorial officers mentioned in the records is large, the emphasis falling differently in different localities, according to the nature of the land; the *punderus*, for example, or keeper of the pound and live stock, being very prominent at Durham,¹ the *liguarus* and woodwards at Abingdon and Glastonbury,² the *dichreves* in the fen country.³ In the Rochester custumal a *custos ville* appears in connexion with merchet, who does not seem to have been very closely identified with the lord.⁴

The liability to serve as reeve or in any other manorial office was generally considered an evidence of villeinage. In Brithwolton, Berkshire, for example, it was permissible for the lord to choose his reeve or other minister from the *vir-garii* or from the *cottarii* or from those holding assarts, ‘for all are villeins, and of servile condition.’⁵ ‘To serve as reeve’ stands in the Hundred Rolls side by side with ‘talliagible at the lord’s will’ as a sign of servile. In many cases, however, there was in practice, as has been said, a gradation in respect of the liability to such offices. Thus, for example, at Sutton in Warwickshire, men of the bondage with one virgate were liable to be officers of the king or lord, as was pleasing; but men with a half virgate, or a *nocata*, or a cottage, were liable

¹ Bish. Hatf. Surv., pp. 13, 95; D. H. R., p. 50.
³ Claud. C. xi, f. 75: ‘Item si dominus voluerit iste crit prepositus a castrum vel ad bertone vel ad redditum colligendum vel Dichevre.’
⁴ Cust. Roff., p. 2: ‘Si quis autem in predicta villa maritare voluerit filiam suam alicui de ipsa villa tantummodo ostendet illud custodi ville et rogabit cum ut veniat ad nupcias et maritabit eam sic. Si quis vero filiam suam extra villam dare voluerit non licebit ei hoc facere nisi per licenciam et voluntatem domini sui.’
⁵ Batt. Abb. Cust., p. 67: ‘Licebit etiam domino eligere sibi Prepositum et alios ministros vel de virgariis vel de cottariis vel de his qui tenent de assarto pro voluntate sua, quia omnes sunt villani sui et servilis conditionis.’
only to be beadles or decenarii. At Dereham in Norfolk the lord could make a reeve of any molman holding at least twelve acres, or of any operarius holding a half virgate at least; he could make a beadle of a molman with six acres, or an operarius with six acres, and a forester of a molman with six acres. 2 Again, three men in a vill were liable to reeveship, the others were liable to be beadles or shepherds. 3 At Bury St. Edmunds any of the pokeavers might be made either beadle or collector of malt. 4

Among the duties of the reeve is occasionally mentioned the collecting of the rents. Thus in Ely manors it was usual to have a reeve ad castrum, probably at the castle at Ely, which was in the hands of the bishop, a reeve ad bertona, a dichreve, and a reeve ad colligendum redditum, the last office being held in one case secundum turnum vicinorum. 5 Again, at Glastonbury the reeve ranked with the virgater, was free from the services of the virgater except the donum, and was to receive all the toll which fell in a vill held at farm by the villata and 2s. additional for carrying the gabulum or farm to Glastonbury, of which 2s. the vill gives 10½d. in common. 6

As a rule certain privileges and exemptions went with the tenure of manorial offices. Freedom from some of the services

---

1 Dugdale, Antiq. Warw. ii. 911.
2 Claud. C. xi, f. 232: 'Scendum quod dominus potest facere prepositum suum de quolibet molman duodecim acras terre tenente ad minus, vel de quolibet operario unam virgatam terre vel dimidiam virgatam terre ad minus si voluerit. Et tunc ille molman qui fuerit prepositus erit quietus de tota annuali redditi suo et de omnibus consuetudinibus.' The beadle may be chosen from molmen with six acres, the forester from the same.
3 Ibid. ff. 252, 270, 304.
4 Harl. MSS. 3977, f. 37: 'Et dominus faciet quemcunque voluerit de pokeaveris Bedellum aut collectorem brasei.' Compare ff. 38, 80, and Harl. MSS. 1005, f. 69.
5 Cadw. C. xi, f. 75: Wisbech, a censarius with a half ninemandale: 'Item si dominus voluerit iste erit prepositus ad castrum vel ad bertona vel ad redditum colligendum vel dichreve.' Again, ff. 82, 203, 205, 90: 'Erit prepositus ad colligendum redditum in eodem hameletto et non extra vel dichreve secundum turnum vicinorum suorum.' For the nine-
mandale see Tiber. B. ii, ff. 144, 147.
6 Mich. Ambr. Kent., pp. 56, 57, 67: 'Et debet habere totum tolnetum, quod accidit in villa et duo solidos pro gabulo portando Glaston' unde xd. et ob. debent dare de tota villata communicatus, scilicet, dum manerium est ad firmam in manu illorum.'
was common; for example, at Bury the beadle or forester was free from half the work except the ploughing, and free also from the gavol ploughing;¹ the berebrit at Glastonbury was free from one man’s work;² the keyward was free from one man’s work and 5s. gabulum,³ the field hayward at Bury was free from some services but gave felsten and carried the farms,⁴ the reeve who collected rents at Ely was free de messione.⁵ A molman who was reeve at Derham was free from all his annual rents and from all his customs for the year,⁶ but elsewhere a customar was not free.⁷ At Bleadon the reeve was free from daynae manuales and pannage.⁸ The woodland at Glastonbury was free from 4s. gabulum.⁹ Sometimes the privilege of office consisted in receiving certain perquisites; for example, the same woodland who was free from gabulum at Glastonbury could take dead wood, and other woodwards received corn.¹⁰ The shepherd at Glastonbury had one lamb and one fleece, the herdsman at Bleadon had milk and whey.¹¹ At Bury certain officers had the right to receive glovesilver and lammessilver.¹² The most common and interesting privilege of office, however, was the tenure of small pieces of land regularly belonging to the office and called sometimes by its name. Thus on a Glastonbury manor a certain tenant held five acres quia bedellus est;¹³ elsewhere Budellond appears,¹⁴ and there are mentioned certain bits of land which pertain to the ploughs called Sulstiche and Goddingstiche, one of which should go to each carucarius.¹⁵ The Glastonbury reeve received one acre of corn, one acre of meadow, one lamb, the pasture of two oxen, and was free from all services except

⁴ Harl. MSS. 3977, f. 86.
⁵ Ibid. f. 232.
⁶ Ibid. p. 194.
⁷ Inqu. 1189, pp. 14, 79.
⁸ Inqu. 1189, p. 61.
¹² Harl. MSS. 3977, ff. 28, 110.
¹³ Ibid. p. 139: ‘Et sunt particule terrarum super venientes que pertinent ad carucas que vocantur Sulstiche et Goddingchestiche unde iste, si est carucarius, debet habere particulam sicut ceteri carucarii.’
the *donum ad lardarium.* 

Reeveland is mentioned, probably as another name for the acre of corn which he received, and *refhammes* which are explained as two *hammes* of pasture belonging to the office of reeve. 

Reeveland occurs also at Bleadon, and again, together with *revemede* and *revesgore,* at Ramsey, where the reeve was commonly free from *consuetudo* and ate for part of the year at the lord’s table. 

Smithland occurs in Durham, and also *punderland,* land which is said to belong to the office of *punderus,* although it was held, together with the office, by the men of the vill. 

At Sutton in Warwickshire the half part of the fee of the woodland, *de venatione capta,* is mentioned. 

One is reminded of the constantly recurring statement in the Welsh laws regarding the officers of the king’s household—‘he is to have his land free.’ 

In spite, however, of the appurtenant privileges, the impression given by the documents is that the holding of office was very unpopular and burdensome, and to be avoided wherever possible. Occasionally a payment like the *Revekeye* or *Keyesilver* is made by the villata in common in order that an office may not be incumbent upon them. 

In Durham manors the office of *punderus,* together with the *punderland,* was commonly held by the tenants *inter se* and paid for with a money rent, the hens and eggs incumbent on *punderland* being still rendered.

CHAPTER V

MISCELLANEOUS RENTS

A number of rents are mentioned in the customals and rolls very briefly, and without explanation of the object for which they were paid. Suggestions regarding the meaning of some of them have been hazarded: of others no interpretation has been attempted. Greater philological knowledge and familiarity with local customs would, however, probably explain most of them. For convenience these obscure rents have been arranged alphabetically, and to them have been added a few others whose classification has, for one reason or another, proved difficult.

_Achabe_ was a rent paid in Cambridge on Hock Tuesday.\(^1\) With it may perhaps be compared _Hoselver_, but a relation between the two rents is very doubtful.

_Akergeve_,\(^2\) a rent or 'giving', probably based on the acre.

_Bedgeld,\(^3\) was probably another form of merchet. The form is suggestive also of the commutation of a boon service.

_Bickton silver_. It is suggested in Hazlitt's Blount's Tenures that this rent was the commutation of the service of emptying the lord's jakes at Bickton.\(^4\)

_Biresilver_.\(^5\) _Booting corn_ was a Buckinghamshire corn rent, commuted.\(^6\)

_Braybotpeni_.\(^7\)

---

1 Harl. MSS. 3977, f. 93: 'Tenentes et tenementa et redditus in Cantebrig.' A messuage pays 12d. 'et Regi ijd. quod dicitur Achabe in die Hoxtiwesda'. Cf. f. 94: a rent paid 'ad husteng' ville' at Michaelmas, 'et similiter ad alium terminum ad diem qui vocatur hostiwesa.'

2 Harl. MSS. 3977, f. 37: 'De auxilio franci plegii xijs. Akergeve iijlid. vs. xd. ob. cum pleg?'

3 Blomefield's Norfolk, ix. 294; Hazlitt’s Blount’s Tenures, p. 114.

4 Hazlitt’s Blount’s Tenures, p. 25.

5 Ibid. glossary.

6 Ibid. p. 138.

7 Harl. MSS. 3977, f. 108: (Fornham) 'Et dabit preterea per annum xijd. de redditu et pro braybotpeni ld.'
Brownesilver\textsuperscript{1} was a rent paid at Saint Edmund's for licence to hold a brewery. See New Eng. Dict. sub voce Brewern.

Byscot,\textsuperscript{2} an occasional fine in East Anglia for not repairing ditches and causeways. It is probably mentioned in an Ely custumal as the forisfactura de Belawe, of which the lord receives half. The rent arose evidently from infringements of rules imposed by the village community—the by-laws.

Censar\textsuperscript{1} is a rent found in Devon and Cornwall in documents of the reign of Edward III.\textsuperscript{3} It may be simply a variation of the form census, but seems to have had a more specific meaning. Census and tunnus census appear in East Anglia (see Marceselver). It is barely possible, however, that it might be connected with the tenserie of the Chronicle for Stephen's reign, which was especially heavy in the west and East Anglia, and has lingered on as a manorial due.

Census, Tunnus Census, see Marceselver.

Cliff silver, a rent mentioned in a late document, without explanation.\textsuperscript{4} Possibly it should be compared with the pasturage on the 'cliffs' received by the tenant of Battle.\textsuperscript{5}

Craweselver, Craneselver, a very common Ely rent, probably a commutation of some service connected with crows. The 'rook boy', who now receives a small compensation for his service of keeping the rooks from the corn, may be a survival of manorial custom.\textsuperscript{6}

\textsuperscript{1} Harl. MSS. 1005, f. 68: (Pakenham) 'xxis. vjd. de Brownesilver'; f. 69: Harl. MSS. 3977, f. 84.
\textsuperscript{2} Hazlitt's Blount's Tenures, p. 369: Tiber. B. ii, f. 106.
\textsuperscript{3} Exeter Vac. Roll, 1138/2: (Paignton) 'Et de xvij. ijd. ob. gu. superoneratis per auditores in titulo redditus assise ibidem et redditus censar' et cariag' et restyangwode ad festum Sancti Martini'; (Cornwall, Penlyn): 'Et de ijs. iijd. superoneratis per auditores pro quadam consuetudine vocata censar' et auxilio custumariorum ibidem pro eo quod tenentes et custumarii que consuetudines et auxilia predicta facere solebant mortui sunt.' Also, Eng. Hist. Rev. xv. 310, Laws of Breteuil, in a charter to Bideford burgesses freeing them from all toll, custom, censary, or stallage. They are to choose one burgess to be head officer, to have 'throughout the year toll and censary of the town by land and water, to the year's end, for 10s. to be paid'. Ashmol. MSS. 864 (Bl. bk. Coven.), f. 17: from several tenants small sums are due, ranging from a penny to sixpence, 'pro censar' et aysiaments.'
\textsuperscript{4} Mon. Angl. i. 527: (Berks) 'Redd' vocat Clyfisilver'.
\textsuperscript{5} Batt. Abb. Cust., p. 51: quoted above.
\textsuperscript{6} Ely Vac. Roll, 1132/10: (Dodington, Cambs.) 'Et de vijs. vjd. de
Custumpand, see Marcelsilver.

Dissilver was the commutation of the rent of dishes, or of the service of supplying them for special occasions. It occurs in the description in the Hundred Rolls of the Earl of Cornwall's manor at Glutton, and in a compotus roll of Queen Philippa's manor there.¹ Tenants of Peterborough in villages near Glutton paid _disci_, to the number of five, ten, or forty, in addition to their rents of bread, sheep, cloth, and poultry, _de consuetudine Sancti Petri_.² The _custus discorum_ appears at Ramsey.³

_Dorton'ning_;⁴ the form is possibly a variant of Bortreming.

_Elsilver_ is probably the English form of _ulnagium_, a toll on sales of cloth by the ell or yard.⁵ (Or perhaps _Eel-silver_?)

_Ffelstne_, _Felsten_. These forms occur in rolls of St. Edmund's manor of Pakenham.⁶ Possibly it should be connected with _filstingpound_, or with some rent supplementary to the farm.

_Feoderfe_ was perhaps the commutation of the ordinary _fodercorn_, or rent of fodder. It occurs on a Cambridgeshire manor.⁷

_Ferthing_, _Ferthingsilver_. This rent occurs in the important Ely manor of Wisbech, but the object for which it was paid is not stated.⁸ Compare Whitson farthings.

粳dam certo redditu quod vocatur Crawsiluer per annum ad terminum S. Michaelis;¹ Claud. C. xi, f. 66; Tiber. B. ii, pass.
² Chron. Petrob., p. 168 n.
³ Ram. Cart. i. 363: 'Custos discorum percipiet . . . dimidiam acram frumenti et dimidiam acram avene'; cf. i. 408.
⁴ Harl. MSS. 3977, f. 38: (Neutone) 'Redditus Mutabiles . . . dorton'ning xijd.' See below, 'borchsilver.'
⁶ Harl. MSS. 1005, f. 68: (Pakenham) 'Et lxs. de fielstne'; Harl. MSS. 3977, f. 86: (Pakenham) 'Et ex consuetudine ut dicitur habere debet stipulam pisarum et fabarum et erit quietus de auxilio quod vocatur felsten quia colligit illud auxilium.' If he be feldhayward, he is free from some services and fielstne. Blomefield (Norfolk, ix. 294) may refer to the same rent: 'Felsne is money paid by the tenant to the lord, and was 30s. per annum for the common aid.'
⁷ Ely Vac. Roll, 1132/10; Claud. C. xi, f. 75: '1 mes' cens' et half cinemannodole dat de ferthing' ad Annunciationem B. Marie ijd. et ob. '; f. 80: _a plena terra_ of 34 acres gives 2d. at Easter. 'Summa ferthingsilver'; ff. 86, 89, 94.
FOSELYVER was perhaps a commutation of ditch digging.

Foxalpeni is a curious rent which ‘emerged’ in Wye, Kent, in the year of the war between King John and his barons. If the rent were not paid, the juda owing it were heavily amerced, at 100s., and declared *gavellate.*

Frisilver is probably only another form of the common *frithsilver.**

Greensilver. At Writtle in Essex a halfpenny was paid to the lord from every house whose door opened towards Greenbury.

Grippure, possibly a pasture rent.6

Gryuespound, possibly a rent resembling the witepund.

Haworthsylver.8

Hoeselver, possibly a rent at Hokeday, analogous to the Whitson farthings, or the *Achabe.*

Hognell Rent.10

Horderesyft occurs in Devon as a payment subtracted by a tithing.

Hulvir.12

Hyndergeld or *hinderselver.*13 It is barely possible that this

1 Harl. MSS. 3977, f. 61: (Neutone) a tenement of 15 acres ‘dabit iiij ob. de foselver et erit quietus de dimidia operacione’.

4 Ashmol. MSS. 864, f. 17: ‘pro frisyilver iiijś.’

6 Ely Vac. Roll, 1132/10 (Wysebech) ‘Et de viij. de redditu vocato bosing’ grippure et shesestate.

7 Norwich Vac. Roll, 1141/1: (Thornham) ‘Et de viij. xiiij. viij. de diversis consuetudinibus videlicet presentsilver gryuespound iuncandi triturandi.’

8 Mon. Angl. iii. 512: (Selby, Yorks.) ‘Redd’ custum’ tenen’ pro quadam custuma vocata Haworth sylver.’

10 Mon. Angl. iii. 527 (Shrewsbury) ‘Annual’ Redd, voc’ Hognell Rente.’

11 Rot. Hund. i. 66. The tithing did not reply to the bailiff of the hundred at Michaelmas ‘ad tremur’, ‘et nichilominus subtraxerunt xvij. . . annu’ de Hord’ esyft consuetos’; cf. i. 92.

12 Rot. Hund. i. 105 (Northorpingham Hund., Norfolk) a ‘service’.

13 Glouc. Cart. iii. 188. ‘Three virgates give 12d. ‘ad hyndergeld’ at Martinmas; cf. pp. 189 (bis), 191, 200.
Gloucester rent may have some connexion with hunting service.

Insute occurs in the Crondal Records, the editor suggesting that the form is for in secta. The suggestion seems not very probable, yet suite silver, money for suit, occurs, and perhaps the phrase suit de prison has a similar derivation.

Kemersh rent possibly refers only to a place name.

Keyesilver, see Revekeye.

Leppe and Lasse was an Essex custom, probably a toll levied according to some ancient measures. Every cart that came over Greenbury, perhaps an ancient market-place, paid four pence to the lord of the manor, unless the cart belonged to a nobleman. Compare Greensilver.

Loretsilver.

Lythsilver, probably lightsilver, money ad candelam.

Marceselver. On the manors belonging to St. Edmund there is often mentioned a rent of a fixed sum of money, sometimes a marc, sometimes a pound, due from the vill, to which the tenants contributed according to their holdings. It is called marceselver, redditus census, tunnu census, auxilium statutum, custumpond, but the object for which it was paid

---

1 Crondal Records, p. 94: (Yateleigh) 'Tota villata de Yateleigh dat domino 23. de Insutes'; p. 97: 'Totus hamelettus de Suthwode dat domino 12/l. de Insute.'
2 Hazlitt's Blount's Tenures, p. 77.
4 Mon. Angl. ii. 486: (Shaftesbury) 'Redd' Ass voc' Kemersh Rent.'
6 Harl. MSS. 3977, f. 83: (Heringwelle) 'Habent de loretsilver xiiid.'
8 Harl. MSS. 3977, f. 91: (Sudeye) 'Auxilium statutum. Notandum quod quolibet anno accipiendum est ad festum S. Michaels auxilium statutum i marce. Tunnu census. Notandum quod semper ab ad Vincula S. Petri accipiendus est census ville ad Purificacionem'; f. 89: (Bradefeud) 'Item dabit ad marcam viid.'; f. 39: (Werketune) 'De auxilium abbatis di marce.'; f. 62: (Pakeham) 'Hoc est auxilium aule de Pak' lxs.'; f. 93: (March) 'Ad. censu a (sic) Purificacionem'; Harl. MSS. 1005, f. 69: (Bradefeud) 'De marceseluer xiijs. iijd.'; f. 72: (Sudreye) 'Ad festum S. Ethelredede 1 marc. de auxiliiis cum ijs. de merch'; f. 73: (Nova Berton) 'Omnes sunt gersurnarii ad voluntatem domini ad festum S. Michaelis de redd' ville xxi sol... De auxiliiis albis dim' marcs... Ad festum S. Edmuni de redd, ville xxix... De auxiliiis ville xxix. iijd.'; Harl. MSS. 3977, f. 100: (Cokefeld) 'Et sciendum est quod omnes custumarii predicti dabunt xvjs. ad custumpond' de jure'; f. 101: Those belonging 'ad aulam inferiorem' of Cokefeld pay custumpond xvs. iijd. ob.; Harl. MSS. 1005, f. 68: 'De custumpany xvjs.'
is not stated. It is possible that it may be another form of witepund, or fulstingpound, and that pundscot may be identical with it. It may, on the other hand, refer to the customary tallage of the villeins, or it may be a rent distinct from either.

Master's Rent.¹
Melderfe.²
Mowetsilver.³
Netsilver⁴ was probably a pasture rent, the form being derived from the Anglo-Saxon neat.

Nodway money.⁵
Pincreecheyled.⁶

Puherelleschild or Auxilium Purificationis, a rent occurring frequently in the Somersetshire Hundred Rolls; the passages usually refer to a subtraction from the king.⁷

Radbodispund was a royal rent subtracted from the king in Norfolk.⁸

Revekeye. This rent is probably explained by the Keysilver of Tynewell, which is paid by twelve tenants of virgates lying at a distance from Tynewell, 'that they may not be chosen for the reeveship.'⁹

Ruschewsylver.¹⁰

Saddlesilver occurs at Wimbledon. At the first coming of

¹ Mon. Angl. vi. 306: (Hants.) 'Redd' voc' Master's Rent.'

Again, ii. 688: (Oxon.) 'et pro tallagio ad purificacionem Beate Marie viijd. ob.' (probably manorial).
⁸ Rot. Hund. i. 445: 'Consuetudines' subtracted from the hundred of Fourhove; tenements 'et terra Flamberti in Wiclewd solesant facere consuetudines scilicet ad tarnum Vicecomitis et auxilium ejusdem et radbodispund.'
⁹ Min. Acc. 850/10: Barton Regis, with geresgive. See Keysilver. Comp. of Ketteringe: 'Et de xxxixs. de xxxix virgatis de consuetudine de Keysilver in festo S. Andree.' Again, p. 45.
¹⁰ Mon. Angl. i. 443: Barking, Office of Cellaress, 'Sche must pay to every ladye of the covent . . . for their ruschewsylver.' Cf. p. 445.
the archbishop the customary tenants gave a 'gifte, called saddlesilver, accustomed to be five marks'. Such payments at the coming of lords of fees were common. At Hexham a palfrey was bought for the new abbot. At Tynemouth the welcom Abbatis was paid.¹

Scap.²

Schepersulsfer³ was probably a payment made to the shepherd.

Schrebgavol.⁴

Schydsclver.⁵

Scorfe.⁶

Sesilver, a rent in East Anglia, probably another form of Sefare, or commutation of the carriage by water.⁷

Shesilver,⁸ perhaps another form of sesilver.

Snottering silver was a customary rent paid to the Abbot of Colchester.⁹ Charnock suggests that the word is derived from snode, a morsel, or snathe, to lop or prune.

Spenningfe was a common customary rent on the manors of Worcester.¹⁰ Possibly it was some commutation of the service of spinning, surviving on the old scrudland of the monks.

¹ Hazlitt's Blount's Tenures, p. 372. Cf. Hexh. Pr. ii. 76: and 'Welcom Abbatis,' above. Mr. Gray has kindly given me a reference to another palfrey payment. At the change of every lord is payable a contribution 'by the name of Palfrey mony amounting to the sum of 60s. leviable upon the copiehold lands only.' Misc. B. Land Revenue, 214, f. 206; Customs of Absheshall in Wigborough [Essex].
² Rot. Hund. ii. 608. It may be an estover right, and not a rent.
³ Abing. Acc. p. 40: 'Item pro schepersulsfer ijd. gu.'
⁴ Rot. Hund. i. 163: (Colchester) 'Item abbas subtraxit ... xvd. ob. annui redditus de schrebgavel quos ... reddere debet predicto burgo.'
⁵ Add. MSS. 6159, f. 176. Chert, Kent, an l (schyldsilver) has been erased.

⁷ Harl. MSS. 1005, ff. 38, 69; Ibid. 3977, f. 61; Tiber B. ii. f. 177, pass.
⁸ Claud. C. xi, f. 279: (Rathlesdene, Suff.) a plena terra gives 2d. shesilver at the feast of St. Andrew. Again, f. 283.
¹⁰ Vac. Roll, 1143/18: (Hanbury in Salso Marisco) 'Et de iiis. 1d. ob. de quadam certa consuetudine que vocatur spenningfe relaxata'; (Stoke) 'et de vijs. vjd. de quadam certa consuetudine que vocatur spenningfe arentata ad terminos pasche pentecostes et Natalis Domine.' The word occurs frequently in the roll.
Storefe was possibly another form for scorfæ, or should be so written.

Sulsilver was probably a commutation of the service of giving the lord ploughshares. It occurs on St. Edmund's manors in both the English and the Latin forms. Elsewhere ploughshares were frequently paid to the lord.

Suttonsilver.

Toowirst.

Unthield, Unchield, Hunthield, was a Kentish rent, perhaps commuting old hunting services, and to be compared with the Gloucester huntesesilver. It may, on the other hand, have been the same as Unyeld.

Unyeld, Onziell, Ungeld, Onyeld, was an East Anglian rent, perhaps the same as the foregoing. In the form Ongiell it appears at Great Tey, Essex.

Waurscot, a rent in Lincolnshire for wax for the church. The Ely waxsilver, or waresilver, is probably the same rent. Compare waxsilver.

Whitehartsilver.

Whitson farthings. There is nothing to show the object of this Whitsuntide rent.

1 Rot. Hund. ii. 491: (Cambs.) Customary tenants with twenty acres give 'xiii. nomine storefe'.
2 Harl. MSS. 1005, f. 68: 'et ixd. de iij vomeribus'; f. 69; f. 73: 'de sulsilver vs.'; Harl. MSS. 3977, f. 39: 'de sulselver iijd.'
3 Faust. A. i, ff. 11, 53, 78; Tiber. ii, f. 90: 'Preterea dabit per annum tres denarios quando dominus voluerit ad emendum ploutimber et erit quietus de opere unius ebdomadae.'

9 Hazlitt's Blount's Tenures, p. 380; Tiber. ii, ff. 125, 236.
10 Ibid. p. 367.
11 Mon. Angl. ii. 45.
Wightfee was possibly another form of Witepund\textsuperscript{1}.

Wiveneweddinge was a service or rent on the Gloucester manor of Barton Regis.\textsuperscript{2} It is probable that it was a payment levied on marriage: wivene weddinge, wives wedding. Cf. Liebermann, Gesetze der Angelsachsen, i. 442: wifmannes bewedding.

Wodehac was a royal rent paid to the abbot in Ramsey manors, by the 'free hides of Hirstingston hundred'.\textsuperscript{3} It may have denoted a rent similar to boistagium.

Wodewelleschot\textsuperscript{4} was a royal rent occurring in Northgrenewen hundred, Norfolk, probably paid in the beginning by geldable land for the maintenance of the woodwork of fortifications.

Yerdsilver\textsuperscript{5} was possibly the equivalent of ulynagium.

\begin{itemize}

\end{itemize}
CHAPTER VI

ROYAL RENTS: ADMINISTRATIVE

Rents of a second class incumbent on the customary tenants of the manor were those in origin not customary and not manorial, but political, resulting from public imposts, and paid to the king through his officers or to the lord of the manor as the holder of a franchise. These payments, or the services of which they were sometimes the commutation, made up the national obligation of the land, the financial burden which when paid to the king caused the land to be considered geldable, when paid to the manorial lord for his own uses caused it to be considered non-geldable. Theoretically all land was in its origin geldable and could be made non-geldable only by express grant. The lord, that is to say, had his rights by charter from the king; he might exercise some royal rights over land in certain localities, other royal rights over land in other localities, but in no case, as the lawyers of the crown argued, could he exercise justly any right unless he could show a definite grant of it. All rights were annexed to the crown and liberties pertaining to the dignity of the crown could not be alienated by general words nor did long use justify usurpation. Yet the fact that public justice often assumed a private character and also that the payment both of certain services which by this time had little but a financial value, and also of many or all royal dues had become matters of arrangement between the lord and the king led necessarily to confusion with regard to the incidence of the burden, and gave opportunities for unchecked usurpations and extensions of charter privileges.

The arrangements regarding the collection and destination of royal rents were intricate. The king in some cases was in seisin of payments which in other cases went to manorial lords. The manorial lords collected such dues with or without the presence of the royal bailiffs, as the case might be,
and paid the bailiffs for the privilege of retaining them for their own uses, or retained them without payment, or paid them over entirely or in part to the king. Moreover, such royal dues were, by the time of the Hundred Rolls at least, to some extent localized. Payments connected primarily with the view of frankpledge do not, for example, appear in counties where that view was not exercised; hidage appears in some counties and not in others. Some dues, too, were paid occasionally, some annually. In short, the Hundred Rolls and the Quo Warranto Rolls disclose a very tangled network of judicial and financial rights and duties, the understanding of which is not helped very greatly by the study of other material.

If the rents which were royal in origin be considered from the point of view of the manor, and the more general subject of their relation to the central government be left to one side as beyond the particular field of this study, two main questions seem to present themselves; first, which of the manorial payments should be properly included in the class of those which, when paid to the king, made the land geldable, and, secondly, what was the method of assessment of such dues within the manor. It will be convenient to discuss these questions together, in an enumeration of royal rents, beginning with those that were specifically part of the geld of the kingdom and continuing with those that were connected in one way or another with the courts and the administration of justice. A table compiled from the Hundred Rolls placed at the end of this study will indicate roughly the general distribution of royal rents or tests of geldable land, as they may be called, in different counties.

Hidagium. In the thirteenth and fourteenth centuries the old geld or land tax appeared in many localities as hidage. As the name indicates, hidage was based on the hide and was not paid to the king by land extra hidam; land which, like the

1 Ram. Cart. i. 334: A virgate once gave hidage, sheriff's aid, and pontage. 'Quae servitia a tempore J. R. tunc temporis firmarii ... qui eandem virgatam terrae ... fraudulenter posuit extra hidam, omnia hactenus detinentur'; i. 440: 'Terrae quae sunt extra hidam et quae non dant hydagium.' And, i. 308, 438; ii. 13; pass.
old royal manors of Domesday Book owing a farm and no geld, was usually described not in fiscal hides but in areal measures. Land *extra hidam* as far as the king was concerned, sometimes included a whole manor or fee, sometimes only certain lands within the manor, and the profits of it were taken by the lord of the fee justly or unjustly when it was free from the royal hidage. The most common exemption was of land ‘elemosinata’, in the hands of the church,¹ but honours and parts of lay fees were also often non-geldable.² Such exceptions were based, as has been said, on charter or were the result of long usurpation or, occasionally, of more recent aggression on the part of the great lords. Complaints that the lords have subtracted hidage are frequent in certain parts of the Hundred Rolls: it is disappointing, however, to find that in the Quo Warranto Rolls such subtractions are rarely the subject of separate pleadings,³ and exact statements concerning the nature of the payment are therefore not easy to find.

It is clear, however, that hidage is frequently mentioned among the financial burdens in some counties, and is not mentioned at all in other counties. Thus in the Hundred Rolls we find it recorded commonly and indisputably in the counties of Bedford, Buckingham, and Oxford, more rarely in Cambridgeshire, where it is usually, though not exclusively, found on the lands of the Abbot of Ramsey, in Huntingdonshire, where it occurs on Ramsey lands only, and very occasionally elsewhere. In other counties it may sometimes have been included under vague words like scot and lot, regalities, forinsec service, especially since it is several times mentioned in the custumals of manors in counties in which it is not recorded in the Hundred Rolls. The Domesday of St. Paul’s, for example, though at an earlier date than the Hundred Rolls, shows that the manor of Barling in Essex, a county in which the payment is not mentioned in the Hundred Rolls, paid 31d. to the bailiff of the hundred ‘pro

¹ Rot. Hund. i. 16, 17, 31; ii. 323, 457, 477, pass.
² Ibid. i. 2, 27, 32, 41, 53; ii. 343, 693, pass.
³ But see P. Q. W., p. 88.
hidagio'. Yet while this is true occasionally, the constant inclusion of hidage in some counties and exclusion of it from others in the Hundred Rolls, and the generally corresponding distribution of it in manorial customaries and extents of the same approximate date, would seem to show that at the time the Hundred Rolls were compiled the rent was not of universal and regular occurrence under the name hidage. Perhaps the explanation of this irregular distribution may lie in the fact that in the counties where it occurs most commonly it seems to have become usually an annual payment, and is therefore included naturally among the regular sources of revenue. In a few cases even in these counties there are references to a more occasional hidage. On the manors of Ramsey in Cambridgeshire and Huntingdonshire, for example, hidage is paid 'quando currit' or 'quando evenerit'.

The Ramsey hidage, however, seems to have been exceptional; it was, we learn, from the chartulary, a levy made by the abbot usually on his non-military tenants, not paid to the king, but turned over to the support of the four knights who were due from the abbey, and it took the place among non-military tenants, in many, though not in all, cases, of the scutage on military tenants. The conditions of knight service were somewhat unusual at Ramsey. Again, the Devonshire Hundred Rolls refer to definite specific occasions on which a hidage was levied by the sheriffs from the county, and the Glastonbury hidage seems to have been of this kind. Once a hidage was

1 D. S. P., p. 64; and see also Harl. MSS. 1005, f. 72, and Gough MS. Suff. 3 Bodl. (13 H. vi.) for the occurrence in East Anglia.
2 See especially Rot. Hund. ii. 812: (Oxon.) 'Quod vero hydagium modo redactum est in annuum redditum et nichilominus amerciantur homines tot'; and ii. 495.
4 Feudal England, pp. 296–298.
5 Rot. Hund. i. 63: (Barnstaple) 'Dicunt Rogerus Pridyas dum fuit vicecomes cepit de hominibus dicti burgi xls, pro hidagio faciendo contra libertatem dicti burgi ubi nuncquam hydagium facere solebant et antequam pacem habere possent finem fecerunt cum predicto vicecomite per predictos xls'; again, i. 72: 'Dicunt quod in ultima itineracione justicia-rum sedencium apud Exon' fuit quoddam hydagium de tribus solidis ad quamlibet hydam'.
6 Inqu. 1189, p. 115: 'Canonici de Bradestoca tenent unam virgatam et debent acquietare donum vicecomitis et hidagium et nichil modo inde
paid in Bedfordshire at the need of the king. In Cambridgeshire hidage was paid 'as it is placed in the county on hides'.

In the great number of cases in the counties of Bedfordshire, Buckinghamshire, and Oxfordshire especially, hidage was paid by the year, a definite statement being made to that effect in the Hundred Rolls. The usual rate of this annual payment was two shillings on the hide, and even small fractions of holdings paid their correct proportion of this amount. The variations are comparatively infrequent. The rate bears, evidently, no uniform relation to the size of the knight's fee, and the payment was not, except in Ramsey, a military or peculiarly feudal payment, for very often one fee paid twice as much as another fee. Hidage was paid usually to the king through the sheriff, by the fee, or the vill, or even the hundred. Whether the sheriff came into the fee to receive the money or had it sent up to his court, in cases where suitors from the manor in question still attended the tourn, or to the ordinary hundred court, if that were in his hands, or to the county court, does not appear. Very often, however, the payment was made to the lord of the manor, and either retained by him as, for example, in the case of the Earl of Gloucester, or paid over to the king. Sometimes an adjustment was made regarding the amount. Thus in Oxfordshire

faciunt... et in tempore Edwardi vicecomes solet defendere homines Glastonie ad comitatum. Sericus aliquando recepit tres denarios pro dono vicecomitis et hidagium similiter quod canonici modo detinent; and Mich. Ambr. Rent, p. 155.

2 Ibid. ii. 494; 'et solvit hydagium, pontagium, prout ponitur in comitatu per hydam'; again, 495: 'et debet scutagium, pontagium, et hydagium quando evenerit.'
3 Ibid. i. 5, 6, 7, 23, 25, 27, 29, 31; ii. 321, 323, 324, 325, 326, 330, 332, 339, pass. The rate was less uniform in Oxon., e.g. ii. 44, 782, 812, 843, 847, pass.
4 Ibid. i. 4, 29; ii. 44.
5 Ibid. i. 4, for example.
6 Ibid. i. 30, 33, 53; ii. 44, pass.
7 Ibid. i. 29, 31, by certain villis 'de corde comitatus'; ii. 34, 44.
8 Ibid. i. 3, 21.
9 Ibid. i. 29: S. holds two hides and a half and receives 'ad opus suum proprium de hidagio quinque solidos set nescitur quo waranto'; and i. 1, 34.
in one instance the king received one-third of 4s. 6d.\textsuperscript{1} Sometimes the vill \textit{conjunctim}, in common, paid the hidage.\textsuperscript{2}

It is possible, moreover, that an explanation of the occurrence of hidage as an annual payment in certain localities and not in others may lie in the general tendency which is evident towards lumping together sources of revenue, royal or otherwise, towards commuting, that is to say, occasional and more or less uncertain obligations, into fixed annual sums. Such a tendency is evident enough in the payment of other rents,—in the \textit{fulstingpound}, for example,—and is only one manifestation of the strength and prevalence of the farming system. If the sheriff paid a stated annual sum or farm for the county to the king, and the bailiff or private lord paid a farm for the hundred to the sheriff, and the men of the vill paid a stated annual sum for any given rent or for all rents to the lord for the vill, it is clear enough that the farmers of county, hundred, or vill would have gained a very desirable certainty regarding the amount of their revenue. In earlier times it is true that the farm of the county probably did not include the Danegeld, which was rendered separately by the sheriff, and the hidage seems to be a survival of the Danegeld; yet even so it is possible enough that in some counties a general tendency towards uniformity may have modified earlier conditions and changed the occasional Danegeld into the fixed hidage, part of the regular farm.

The understanding of hidage in Oxfordshire is complicated by an apparent connexion made between it and the payment which seems to be identified with the \textit{fulstingpound} of other localities. It would even seem in some cases as if in Oxfordshire this payment of 6d. before judgement and 12d. after judgement made by the tenants that they might be quit of fines in the hundred or the view, were actually called hidage. While this may be true, it does not seem probable that such is necessarily the meaning of hidage elsewhere; it is more likely that in Oxfordshire, as other passages show clearly enough,

\textsuperscript{1} Ibid. ii. 741.
\textsuperscript{2} Ibid. ii. 835: ‘Et tota villa predicta conjunctim dat domino xs. de hydagio per annum’; again, p. 838.
the payment for misdemeanours was called hidage because made by those in the hidage of the vill, and not by those who lived on land extra hidam.

Cornagium, Hornagium, Noutegeld, Horngeld. The payment called cornage found on the lands of Durham, and commonly in Northumberland, Cumberland, Westmoreland, has been a good deal discussed, and some questions regarding it are still unanswered. Dr. Round has disentangled it from castle guard. Mr. Lapsley, in a long and instructive paper, going over all the printed evidence, believes that it was a seigniorial due, in the beginning given by vills probably for right of pasture, basing his argument for the connexion of cornage and pasture on the name itself, on the fact that cattle are the basis of the assessment, and that it is found especially in certain vills in Boldon Book, which in his interesting division of Boldon vills into certain regular types he calls pasture vills. Mr. Lapsley believes that this seigniorial due, whose origin he considers obscure, but which was incumbent on the unfree, became attached in the course of time to certain tenements, became a real burden, or, as he puts it, immediately 'a part of the forinsec service' of the land, and, as a burden on the land, paid by any tenants free or villein who might come to hold such tenements. Later this due was, he believes, used as the symbol of a certain kind of tenure, probably drengage, which was called for convenience per cornaginm. One point in Mr. Lapsley's explanation seems to present grave difficulties. How can the transformation of a seigniorial due for pasturage into a royal payment be accounted for? If cornage had been originally or at any early stage of its development simply a payment to the lord of the vill, why should, then, its change into a burden on the land instead of on the person of the tenant, change it also into a payment to the king instead of to the feudal lord? The process of change is usually in the other direction:—that is to say, originally royal pay-

1 Cornage is sometimes included in immunity lists of lands elsewhere; for example, P. Q. W., p. 253, in Edmund Crouchback's fees.
ments are absorbed by the manorial lords until their original royal character may be almost lost sight of. Is it not more probable that cornage in its origin was simply a form of the geld which, in the north, in localities where pasture was common and agriculture less common than in the south, happened to be levied on the number of animals possessed by the individual or by the vill instead of on the unit of land? It would then have been called in the north cornage, just as in the south a similar payment based on land might be called hidage, being levied at the rate of 2d. an animal. 1 Its inclusion in the list of burdens on geldable land, 2 with the other royal obligations from which land is freed by charter, becomes natural, and it would have no necessary connexion with pasture beyond the fact that the number of animals held forms a natural basis of assessment for taxes in a pastoral community. 3 Indeed, the number of animals is a common enough basis of assessment for the incidence of a fiscal burden within the manor throughout England. Thus the wardpenny is frequently so assessed, 4 and in some cases even the hidage itself. 5 Cornage was evidently one of the royal payments that fell annually, and not on occasion only. It is accounted for regularly in the Pipe Rolls. 6 In this case, as in the case of hidage in certain southern counties, the geld may have become fixed at a certain annual sum, perhaps under the influence of the farm system, which seems to have preferred a certain to an uncertain rent. It was included in the sheriff's

---

1 Feod. Dun., p. 145 n.; Vill. in Eng., p. 295.
2 Newmin. Ch., pp. 197, 269; Cock. Ch. i. 41; Rievaulx Ch., p. 214: North. Ass. Roll, pp. 237, 335; Feod. Dun., p. 145; Rot. Hund. ii. 18 (ii. 472, a misprint for homagio?).
3 Probably this would explain the passage, Bolden Bk., p. 571, where it is stated that certain villani pay rent and labour services like others of Boldon except cornage, 'que non dant pro defectu pasturæ'; compare Bish. Hatf. Surv., p. 173: (Norton) 'Toti villani nichil solvunt de cornagio ibidem, eo quod non habent pasturam, prout patet in libro de Boldon.' In this survey cornage was paid commonly on St. Cuthbert's day, for example, pp. 18, 21, 45. On p. 143 it appears as horneyeld: 'Praedicti cotagii solvunt quolibet anno inter se pro operibus vocatis Horneyeld 2d.'
4 See below, wardpenny.
5 See above.
farm ordinarily, although not invariably. It may, of course, have been an annual payment from the beginning, as were, for example, sheriff's aid and probably the payment of suit and pontage, but in these cases the reason for the appearance of the payment as an annual rent is clear, while cornage looks more like the hidage of Bedfordshire and Buckinghamshire.

This interpretation of cornage may make more clear also the reason for the fact that it is paid commonly, though not invariably, by the vill or villata as a whole, especially as recorded in the Boldon Book. It was pointed out by Professor Maitland that 'tributes to be paid by the vill as a whole in money or in kind are not of recent origin. They are more prominent in the oldest than in other documents'; and Professor Maitland uses the cornage of Boldon Book and the payments in the Black Book of Peterborough as illustrations of his statement. It may be that they were more common also in the vills where conditions were pastoral. Whether or no we may believe that seigniorial pressure has in such cases necessarily intervened to call forth communal action, or whether with Professor Vinogradoff we may believe in the possibility of initial responsibility of the vill as a whole for such burdens, it is certainly clear that an obligation for which the vill as a whole was responsible in the twelfth century would be more likely to be a royal than a seigniorial payment. Seigniorial dues were more often and conveniently apportioned individually among the tenants.

Cornage and the vacca de metride are usually coupled together in the Boldon Book, payment being made in money for cornage and one cow de metride. Some connexion between the two is accepted as possible by Dr. Round, and Mr. Lapsley believes that the vacca de metride, or milch cow, was a regular part of the cornage payment, and an indication that it was

2 D. B. B. p. 147.
3 Gr. of Man., pp. 318, 319, 360, et seq.
4 Comm. of Lond., p. 287: 'From the above important charters (to St. Bees) it would seem that the two dues went together.'
once made in kind and was now in part commuted. Certainly the payment of the cow fell like the payment of the money-rent on the vill as a whole, for where a part of the vill is answerable for a part of the cornage, the same part of the vill is answerable for a corresponding fraction of the cow also. If the payment of *metres*, *metreth*, is the same as the *metride* the connexion is not altogether so clear. A charter of 1149 may point to a distinction.1 Roger, to whom land is conveyed, 'was to render thereby two pence annually, two shillings for cornage, for "metreth" as much as belongs to the land.' In the later Surveys, moreover, the two payments are separately entered, and are paid at different terms;2 cornage by bond and free, *metrith* usually by bond alone. On the lands of St. David's, especially in Cardiganshire, sometimes elsewhere, there is an ancient rent of a cow *de commorth* or *commortha*, sometimes a cow and her calf, paid at the Kalends of May in every third year, and occasionally commuted by a yearly sum, the annual payment being valued at 6s. 8d., the third of the pound. The cow was levied almost certainly on the *gwele*, the number paid by the vills corresponding in almost every case with the *gweles* or *lecti* in the vill, even to fractional parts,3 and was probably a pasture payment, possibly resembling the English *gaerswin*.4 It is tempting to find some connexion between the cow *de commorth* and the cow *de metrida*, but there is no proof. In any case, however, it may well be that

2 See Bish. Hatf. Surv., where the payment of the cow is common but is not always connected with cornage. The two rents are entered separately, and paid at different feasts, St. Martin's and St. Cuthbert's. Cornage varied in amount, *metrith* was 3s., or 6s., or 12s., 6s. being the value of a cow: e.g. p. 18: 'Metrith. Omnes bondi et cotagii solvunt inter se pro i vacca de Metrith ad festum S. Martini ibidem quolibet anno, ut dicunt ... 6s.;' and pp. 17, 28 (*antiqui bondi*), 31, 128, 171, 183.
3 Black Book of St. David's (Cymm. Rec. Soc.), p. 200: 8 lecti, 'qui vacantur gwel' give 8 cows; so also pp. 204, 210, 212, 214, 216, 236, 254, *pass.;* and especially p. 232, where the rate is observed even by small fractions of the gwel. Slight variations occur, pp. 206, 208, 260, 274, which can probably be explained as the result of later confusion; cf. Mon. Angl. iv. 166, 633, 675.
4 Ibid., p. 236: 'Et si aliiq dictorum tenencium non resideant super terram domini et vaccam ibidem habuerint nisi inter alios vacce proportionaliter soluerint quod terra in manu domini debet capi nisi alia districtio super terra inveniatur.
the conjunction of cornage and metride in the lists of obligations on land is purely verbal.

*Auxilium vicecomitis.* Sheriff's aid was one of the most common burdens on geldable land. It is recorded in the Hundred Rolls for the counties of Cambridge, Derby, Devon, Dorset, Essex, Hertford, Huntingdon, Lincoln, Norfolk, Northampton, Nottingham, Suffolk, Sussex, Warwick, and Wilts. In certain other counties it may be included under some general head; in Hereford, for example, as perquisites of sheriffs, or prises and farms of beadles. Its non-appearance in other counties, however, especially in Bedford and Buckingham, for which we have the very full double set of reports, can hardly be explained as merely an omission on the part of the scribe. It may be worthy of remark that four of the counties in which sheriff's aid probably does not appear, Bedfordshire, Buckinghamshire, Berkshire, and Oxfordshire, are the counties in which an annual hidage was levied, more or less generally, at the rate of two shillings on the hide. Both payments occur in Cambridgeshire, but the hidage there is occasional and often subtracted by great lords. In Huntingdonshire also, where sheriff’s aid is common, hidage appears only on the lands of Ramsey, and goes to the abbot. Although the two payments were quite different in their origin it would look as if the annual hidage of two shillings on the hide might in some cases have been considered as the equivalent of the sheriff’s aid.

In view of the large number of references to the sheriff’s aid, and the importance of the payment, it is disappointing to find so little explanation of its exact nature. The accepted definition of the aid as money paid to the sheriff to meet his expenses seems to be upheld by occasional passages. The *shirereveswecome* paid at the tourn in Essex, for example, was probably the same as sheriff’s aid, and so also the *donum*

---

1 Rot. Hund. i. 186.
2 The peculiar Ramsey hidage occurs in Cranfield, Bedfordshire, but is paid to the abbot. Ram. Cart. i. 276, 277, 439, 451, and above, hidage.
4 Rot. Hund. i. 157: ‘Dicunt quod vill’ de Chaur’ solebat venire ad
vicecomitis of Wiltshire and Kent. It may, in the beginning, have been a commutation of the sheriff's right of purveyance, traces of which linger perhaps in the oats paid at the tourn, in the sheaves and poultry sometimes extorted by bailiffs, and in the palefridus vicecomitis, the aid for fodder for the sheriff's horse. In Norfolk the rent was sometimes called shirrevescot, in Northamptonshire shirevesyclede, and in Suffolk scherreveselver. Dr. Round's identification of the consuctudo, over which Becket and the king quarrelled at Woodstock, with the sheriff's aid will be remembered. The opposition of the archbishop to the transformation of the aid into a royal payment was, however, evidently of no permanent avail: it is clear from the Hundred Rolls that the kings of later days in large measure had gained Henry's point, and no distinction is made between the destination of the aid to the sheriff and that of any other royal payment. The aid was no longer apparently the sheriff's peculiar property, but the king 'was seised of it and all other gelds'. Its subtraction was a heavy loss to the king. This assimilation of the aid to the other turnum vicecomitis bis per annum et contribuere ad communem finem xijd. et solebat dare ad shirrevescwellce iijd. et facere sectam ad hundredum.'

1 Ibid. ii. 260, 276: 'Dicunt quod dominus Rex percipit per annum ... de dono Vicecomitis'; Inqu. 1189, p. 115: 'et debent acquietare donum vicecomitis et hidagium et nichil modo inde faciunt et in tempore Edwardo vicecomes solet defendere homines Glastonie ad comitatum. Sericus aliquando recepit tres denarios pro dono vicecomitis et hidagium similiter quod canonici modo detinent'; Mich. Ambr. Kent. p. 167: 'Memorandum quod homines petierunt indicias de dono vicecomitis, scilicet, de qualibet virgata iijd. et de H... ijs. vid.' In Kent the rent was very common, e.g. Faust. A. i. ff. 18, 53 (a sulung gives 12d.), 43, 65.

2 Rot. Hund. i. 454, 483: 'quos reddere solebant annuatim ad hundredum ad redditum quod vocatur Schirrevescot'; and ii. 734: (Oxon) 'shirpeni.'

3 P. Q. W., p. 557.

4 Ibid. p. 731.

6 Rot. Hund. ii. 275, paid by sheriff to king; see also p. 276.

7 Rot. Hund. i. 335 n.: 'Iostea convictum est per xijd et per vicecomitem quod terra illa est geldabilius et quod dominus Rex est seiscitus de auxilio vicecomitis et de omnibus aliis geldis per manum Elye de Rabayn capitalis domini feodi illius ita quod nichil inde deperdit domino Regi'; and i. 329, 331; ii. 448, pass.; P. Q. W., pp. 293, 300.

8 P. Q. W., p. 302.
royal payments was probably easy enough under the system of farming the revenues of the county. It could be included by the sheriff with other sources of his revenue, and to the holder of the knight’s fee or the small tenant from whom it was ultimately due, the original distinction would soon be a matter of no importance.\(^1\)

It is clear from a number of passages in the Hundred Rolls that the aid was paid usually, if not always, at the sheriff’s tourn. In the roll of the sheriff’s tourn in Wiltshire in 1439 it is recorded as paid by the tithing at the tourn.\(^2\) In Clifton hundred in Devonshire the sheriff made one tourn a year and took then from the hundred of Clifton 10s. 2d., ‘qui denarii appellantur auxilium vicecomitis.’\(^3\) Again, in Dorsetshire, until the Provisions of Oxford and the subtractions of Richard of Gloucester, the men of the hundred used to come twice a year to the sheriff’s tourn and give 8s. to the sheriff’s aid.\(^4\) In Essex a vill used to go to the tourn and contribute to the common fine and to the shirreveswelcome.\(^5\) In Norfolk tenants used to pay annually at the hundred the rent called shirreveschot.\(^6\) The aid cannot be identified with another payment made ‘ad turnum vicecomitis’ which was sometimes paid by the same man by whom the sheriff’s aid was also paid,\(^7\) nor usually with hundred aid.\(^8\) Nor can it be identified with money paid as composition of suit at court, although there are occasionally evidences of some confusion between the two payments, especially in Northamptonshire. The abbot of Crowland endevoured, unsuccessfully, to prove that a rent paid by him was for quittance of suit, the sheriff main-

\(^7\) P. Q. W., pp. 731, 774, pass.

\(^8\) But see Rot. Hund. ii. 666: ‘et hundr’heyld scilicet auxilium vice-comitis’; and ii. 172, where it is said to ‘pertain to the hundred’, probably with reference to its payment at the court of the hundred.
taining that the rent in question was paid 'for sheriff's aid, and not for any suit'.

It is difficult to discover the unit of assessment of the sheriff's aid, or any regular and uniform rate at which it was levied. The frequent connexion of the payment with the hundred would suggest that it may originally have been assessed on the hundred and subdivided among the vills. Within the hundred, however, there seems to be no uniformity except perhaps in Lincolnshire, where 20d. is paid usually by the carucate, and in Kent, where it is stated that the rent is taken by hides or by carucates. Sometimes it was made by all classes within the vill together, free, custumarii, coterelli; and it is stated that a man paid secundum proportionem tenementi sui. It was paid by the vill direct to the hundred, or by the knight's fee through the hands of the lord of the fee, or by tithings. Like all other burdens on geldable land it was frequently subtracted by lords, either justly or more often unjustly. The Abbot of Ramsey collected it and retained it, by reason of his regality, through all his hided lands, except in Woldhyrst, where the tenants of the Prior of St. Ives collected and handed over to the reeve of the prior the sheriff's aid, wardpenny, and wodehac, which used to be collected by the abbot's bailiff of the hundred (the abbot held the hundred in which St. Ives lay). The abbot collected his

aid from all classes of tenants, the holders of the free hides, the free tenants, the censuarii, the virgaters, the cottars. The rate varied from 2d. to 6½d. a virgate.¹ The Bishop of Ely kept the aid in parts of Cambridgeshire,² the Abbot of Gloucester collected it in Gloucestershire,³ the Bishop of Lincoln, the Abbot of Peterborough, and the Abbot of Barling collected the ‘pennies of the sheriff’ from their ‘rustics’ and retained them to their own uses, by what warrant was not known.⁴ The Earl of Gloucester was a serious offender in the same respect,⁵ and innumerable lords—all to the heavy loss of the king.⁶ The account of Lincolnshire in the Hundred Rolls is especially instructive. Sheriff’s aid was, in this county, one of the most common and important of the royal payments, being assessed at the rate of 2od. on the carucate. In a surprising number of cases land had become non-geldable at the wapentake, it was no longer talliagible,⁷ it was demense of the king and perhaps never gelded,⁸ it was part of the honour of Richmond,⁹ or had been subtracted by some lay lord,¹⁰ but much more often, having once been geldable it was at the time of the Hundred Rolls ‘terra elemosinata ad grave dampnum domini regis’.¹¹ The church, rightly or wrongly, had obtained the royal dues from a great deal of land, and it was necessary to have the witness of the men of the hundred to prove that land

¹⁰ Ibid. i. 335: ‘Item prior de Ormsby subtraxit forinsecum servitium in Elkington jam xx annis elapsis scilicet auxilium vicecomitis quo waralto nesciunt ad dannnum Regis xijd. de duabus bovatis terrae et sic elemosinatur illa terra que solet esse gueldabilis.’ Also i. 260, 277, 278, pass.
was still geldable at the wapentake, and owed *auxilium vicecomitis*.

**Palefridus Vicecomitis.** With the sheriff’s aid there is sometimes mentioned ‘the aid called *palefridis vicecomitis*’. This rent is evidently a survival of the old purveyance right of the sheriff to obtain fodder for his horse. It may be compared with the common pasture rents for the horses of *raglots* and other bailiffs mentioned in the Welsh extents, and with the oats due at the tourn, and with the common duty of feeding *satellites*, horses, and dogs, of the lord’s hunting parties.

**Hundred aid, Hundred scot, Hundredsilver, Hundredgeld.** In certain localities another payment is mentioned with the sheriff’s aid, the aid of the hundred, or as it should perhaps sometimes be extended, the aid of the *hundredar*. It was probably a payment similar in character to the sheriff’s aid, made to the bailiff of the hundred, who is sometimes called the *hundredarius*, for his personal expenses. It is clearly distinguished from money paid in quittance of suit at the hundred court. In Norfolk, for example, certain tenants paid *12d.*, by which they desired to be free of suit, but the king declared that the *12d.* had always been paid for *hundredscot* and not for quittance of suit, just as in the case of Crowland he declared that a certain rent was for sheriff’s aid and not

for suit. In the Hundred Rolls *hundredscot* occurs most commonly in Norfolk as one of the burdens on geldable land, part of the *geldagium* of the hundred, which is paid over to the king's bailiff unless the *geldagium* has been subtracted by lay lords or the church.\(^1\) In Huntingdonshire the hundred aid was collected and kept by the Abbot of Ramsey for his own uses by reason of his regality.\(^2\) In Staffordshire a hundred aid is mentioned occasionally,\(^3\) and in Hereford *hundredsey*, which may, however, have included all sorts of perquisites of the bailiff of the hundred.\(^4\) Outside of the Hundred Rolls it is found sometimes in manorial documents. It is mentioned once or twice as *hundredpeny* on church manors in Somersetshire, where it was collected probably by the church;\(^5\) it occurs in descriptions of Gloucester manors as the *hundredsilver*, *hundredfe*, which was paid once by the customars in common,\(^6\) and in another case was paid to the king as *hundredsilver*, or as *hundredwite*, by a tenant *pro capite suo*.\(^7\) It may be referred to in the Domesday of St. Paul’s, in the description of the year 1181 of Beauchamp in Essex, when it is stated that the manor defended itself for five hides and gave the sheriff 4s. and the reeve of the hundred 5s. by the hand of the *firmarius* of the manor.\(^8\) It is very common also in lists of franchises.

The comparatively rare occurrence of the aid in the thirteenth century may be due to the fact that the hundreds were either in private hands, or if still in the hands of the king were usually farmed by bailiffs of the sheriff. Suit at court was so often commuted that probably the meetings, except those for the sheriff's tourn, were unimportant, and sparsely attended, and the aid once generally paid on such occasions to the presiding officer had become merged in the

less specific perquisites of bailiffs or of the hundred, which went to make up the farm. That there was not, however, a tendency toward the final abandonment of any of the sources of revenue in the hundred, whether royal or private, is clearly enough shown in the Hundred Rolls, in the exorbitant increase in the amount of farms since earlier times, and the frequent references to the oppression of bailiffs.\(^1\)

*Wardsilver, Wardpenny, Streteward, Wakefe,*\(^2\) *Waytefe.*

One of the most common duties incumbent on geldable land was the service of guard, ward, or watching, a service which by the thirteenth century had often become commuted into *wardsilver, wardpenny,* or some other payment for ward. Various kinds of ward duty must be distinguished from one another: some were manorial, some were feudal, some were royal. Probably in origin, however, all kinds of ward were royal or public services, and part of the maintenance of order in the kingdom. Fairs and markets, for example, at which watches were often made, were, in theory at least, always franchises granted away with their appurtenant profits by the king, while watching in manors might be considered part of the duty of watch and ward, provided for in such detail in the familiar series of regulations of Henry III and Edward I. Ward duties of a higher nature also affected, indirectly, the manorial classes. The ward incumbent on the military tenants was usually castle guard. This duty, originally rendered in service,\(^3\) had by the thirteenth century, in a great number of cases, become commuted, so that it was rendered in money in time of peace, although sometimes still rendered in actual service in time of war.\(^4\) The service was paid at royal or private castles, at the castles of the shires,\(^5\) sometimes at the castle of the hundred,\(^6\) or at castles outside the shire which

6 Ibid. ii. 25, 31, 568, 705; i. 108, 113, 152; and ii. 214: *a hundred attached to a castle,* see below.
were often the castles of the honour of which the fees were held.\(^1\) The castle of Devizes could be guarded in time of peace, the Hundred Rolls state, by twenty-five marcs a year, and no less; and a long list of Wiltshire fees that owed ward at the castle, or had owed it in the past, is appended to the statement.\(^2\) Fees in Bedfordshire owed ward or \textit{ward-selver} at Rockingham and Beverley; in Buckinghamshire at Dover, Northampton, and Rochester; in Cambridgeshire at Cambridge, Rockingham, Craven, Richmond, and, by special arrangement with the Bishop of Ely, at the island of Ely;\(^3\) in Kent at Dover and Rochester; in Lincolnshire at Rockingham; in Norfolk at Norwich and Dover; in Northamptonshire at Northampton, to whose ward we are told fifteen fees in different counties contributed,\(^4\) and at Rockingham; in Oxfordshire at Dover, Banbury, and Windsor; and in Wiltshire at Devizes, and formerly, probably, at Old Sarum. These were some of the chief castles at which ward was due, according to the Hundred Rolls, and these the counties in which payment for ward is commonly mentioned.\(^5\)

The interest of the subject from the point of view of the manorial classes lies in the fact that the commuted service of the castle guard was borne by the customary tenants. The lord of the fee recouped himself for his payment by a collection from his tenants,\(^6\) and, just as in the case of scutage, there was a presumption that the money for the payment would be taken from the military tenants of the lord, from the freeholders and important \textit{censuarii}, rather than

\(^1\) Rot. Hund. i. 20, 26, 29, 31, 491, 495; ii. 235, 460, 461, 486, 518, 567, 568, 580, 785.

\(^4\) Ibid. i. 31; cf. l. 16; ii. 301.

\(^5\) Cott. MSS. Julius F. x. f. 142 b (155 b) gives a list of the castles and towers in Northumberland, royal and private, the names of the castles in Hants, Sussex, Essex, Suffolk, Norfolk, Kent, Somerset, and Devon.

\(^6\) Harl. MSS. 3977, f. 87.
from the villeins proper. Even more often than in the case of scutage, however, the presumption did not hold, and villeins paid their regular quota to the castle guard.\(^1\) The villata sometimes paid the wardsilver in common, or through the lord, becoming responsible for the annual payment of a certain amount;\(^2\) sometimes they paid it according to the number of inhabitants.\(^3\) Very often the rent had got attached to certain tenements in the vill, and not to others.\(^4\) Occasionally the assessment of payment for ward of some kind was made according to the number of animals owned by a man,\(^5\) just as hidage was assessed according to tenement and beasts. Sometimes the ward is recorded in terms of days or weeks or even years,\(^6\) sometimes again it was paid by a sort of rotatory system, a tenant paying men in alternate years.\(^7\) All such arrangements would be the result of local convenience. Often, of course, the wardpenny, like other royal dues, was subtracted from the royal castle and retained by the lord, to the loss of the king.\(^8\) At Fornsett in Norfolk, and on Ely manors in the same county, the term *forwardsilver*, or *forwach*, occurs.\(^9\) It seems to refer to castle guard or some other watching service.

The term *wardsilver* or, more often, *wardpenny*, was probably used also for the commutation of other wards than

1 Rot. Hund. ii. 459, 499, 513, 846; Batt. Abb. Cust., p. 32. It is often not possible to tell what kind of ward is indicated by the common wardpenny often due from customary tenants.

2 Ibid. i. 27, 31, 152; ii. 426, 456, 843.

3 Reg. Worc. Pr., p. 171. The assessment at Ely was on the individual rather than the tenement. Thus the *plena terra*, the *dimidia terra*, and the *cotland* each gave a penny at Stratham, see Claud. C. xi. f. 43, cf. f. 176.

4 Every *tenens de hundredo* gave a penny, see f. 54. The wardpenny belonged to the hundred (ff. 52, 54), but the hundred was in Ely's hands.

those of castles. Bridges were guarded, or the duty of guarding them commuted for a money rent.\(^1\) Ward was kept also at the gates of towns,\(^2\) and along the ways of the hundred,\(^3\) and in meadows near the Severn.\(^4\) In the Hundred Rolls’ accounts of Shropshire *streteward* takes the place of castle guard as the common payment.\(^5\) *Streteward* is coupled regularly with *motfech* as the most important of the burdens on geldable land in the county, and is assessed usually, though not invariably, at the rate of fourpence on the hide.\(^6\) The payment is not called *wardpenny* in this shire, but may well have gone under that name elsewhere. *Streteward* was probably simply part of the familiar duty of watch and ward, applied primarily to watches within villages, but including also the maintenance of order in the roads of townships. The legislation of Henry III and Edward I for the maintenance of order in the vills describes the watches of four or more men, the number varying according to the size of the vill, who are to ensure protection from any form of disturbance, and who have authority to arrest strangers over-night until they can prove the innocence of their intention.\(^7\) A passage quoted by the editor of the Domesday of St. Paul’s from the Domesday of 1222 is interesting as showing the incidence of watch and ward on the villagers. ‘Whoever has cattle on the lands of the lord to the value of 30d. shall give one penny

5 Rot. Hund. ii. 778 (cf. stritpeni).
6 Ibid. ii. 55, 56, 57, 62, 75, pass.; P. Q. W., p. 93. The rate was higher in some hundreds, e. g. ii. 70; cf. ii. 83: ‘Dicunt quod hundredum de Stottesdene est in manu domini Regis et respondit vicecomiti annuitam de xiii marcis excepto streterade quod valet per annum xvijis. Id. et motef xxvxs. Id. et exceptis duobus turnis vicecomitis.’
at the feast of St. Martin, which is called wardpenny, except those that are watching de ward, who watch at the royal street at night—(twelve names follow)—and they shall receive the wardstaff and make the summons of the watch, and shall be quit for the summons from the pennys which are called wardpennys.' Another passage in the Domesday of St. Paul's shows the tenants of Chingford, free and villeins, anciently attending unsummoned three largehundreds in the year. At one of these, the Hokeday largehundred, the tenants were bound 'praesentare quandam Wardam in quodam baculo qui vocatur Wardestaf.' When, later, the view of frankpledge was held by the bailiff of the hundred and the bailiff of the manor in the church of Chingford, 10d. was paid for wardpenny. The picturesque customs relating to the wardstaff are described in other accounts of Essex. A willow bough was cut in a certain wood on a certain day, it was wrapped in a 'faire fyne lynnen cloth' and taken by the bailiff (of the hundred) to the place assigned, where the lord and his tenants on whom the service of watch and ward devolved should attend. A rope was stretched across the road with a bell on the end, and near the bell was the staff laid on a pillow and representing the king’s majesty. The bailiff called the roll:—

'The said Bailiffe shall severally call the names of all the aforesaid tenants, landowners, who shall present their said ordinarie number of men accordingly. Then shall the said Bailiffe in the king’s name straightlie charge and comande them and everie of them to watch and keep the ward in due silence soe that the Kinghe harmless and the countrie scapeless until the sunne arising.' Notches were cut in the staff for the 'full ordinarie number of able men well harnessed with sufficient weapon' that appeared ready to perform the service. The staff was carried through towns and hundreds and then thrown out to sea. There was thus ensured a 'yearly

2 Ibid., p. lxxx, quoting I. 65.
muster of fencible men' to guard the hundred against murder and robbery, for both of which it was liable to pay a fine. At Glastonbury the villeins guarded the way of the hundred.1

Sometimes the service of watching seems to have lost in large measure its royal character and to have become quasi-manorial. Thus the watches at fairs had become a customary service in the many cases where the fair, in origin royal, had become the franchise of a private lord. The Ramsey villeins commonly kept watch at the fair of St. Ives, each in his turn; but this service did not free the villein from the payment of wardpenny to the abbot for castle guard or other services of ward. It should be noted, however, that such watching at St. Ives or 'at other times for the guarding of robbers,' was sometimes considered as the equivalent of some purely manorial services to the lord.2 In such cases the original royal service has become wholly manorialized. The Prior of Boulton in one instance seems to have used some watching service, a 'congregacio hominum que vocatur wach', as the occasion for instituting a fair and holding it without warrant.3 Other forms of manorial watches are described in the Domesday of St. Paul. At Wicham in Essex the virgater watched one night around the curia of the lord at Christmas, a service which is described more fully in a later document quoted by the editor of the Domesday. The customary tenant was bound with other tenants of the same rank to provide that one of them should keep watch at the court from Christmas to Twelfth Day, and have a good fire in the hall, and food. If any damage were done during the watches, he that watched had to make the loss good unless he had raised the hue and cry for the village to go in pursuit. The editor believes that the commutation of this service would have been called ward-

3 P. Q. W., p. 212.
penny also. The messor of the village watched the lord’s crops at night. Guarding the grange is a common manorial service commuted as the rent hedernewech.

It is clear enough that the same tenant might sometimes have to pay wardpenny or wardsilver to help his lord recoup himself for his castle guard, and might, in addition, have to perform some service connected with watch and ward, or some manorial watches. Such matters would be managed differently in different manors, according to the convenience of the lord or communal custom. The assessment of the wardpenny upon the village, as has been said, was either in accordance with a man’s tenement, certain tenements being charged with some such forinsec ward service just as they were charged with suit of court, or in accordance with the number of animals possessed by the tenant. Of course, where the profits of geldable land had been subtracted by the lord wardpenny was taken by him for his own uses, together with the other royal payments. The Hundred Rolls furnish many instances of the subtraction of it ‘to the grave loss of the king’, and in the compotus rolls it is accounted for among the regular profits of the lord of the manor.

Pontage. Another common impost, in origin public or royal, was the pontage or duty of maintaining by labour or money contributions the public bridges, a service not to be confused with the passagium, or toll for passing over the bridge, or the briggeward paid in commutation of the duty of watching it. In the thirteenth century the levy of pontage had become in so many cases a franchise and a means of extortion that it is difficult to discover the original system of assessment; clearly, however, the duty of maintaining the chief bridge of the county, that is to say, the bridge in the chief town, was, in Cambridgeshire and Nottinghamshire in any case, incumbent on the county. In the Quo Warranto

2 Claud. C. xi. f. 117.

Rolls the obligation is sometimes placed with some clearness. The pontage is defined in relation to certain tenants-in-chief as the actual factura of the bridges, the maintenance of them according to certain fixed dimensions, and not as a money fine,¹ and it is shown that the actual labour was to be performed by the villeins of the lord in question, or on certain ancient demesne manors by his sokemen, the wood for repairs being furnished by the lord. Thus in Hertfordshire bridges had been allowed to become weak, and the king, on a recent visit, had incurred grave danger. A long list of the tenants holding by pontage service is therefore given, with the names of the bridges at which their service was due, and the exact amount of service, either in the making of small bridges or in the number of feet of repair on larger ones, to be performed, and three tenements are especially mentioned on whose holders was incumbent a duty of bridge inspection, the duty of examining all the bridges of the county before a royal visitation to see that they were in repair, and of riding over them before the king.² Pasture privileges were sometimes held in return for pontage.³ In the fen district of Lincolnshire bridge services and the related making of ditches and gutters were of special importance, and the responsibility for them was laid very definitely upon certain abbots and priors and their tenants, who are declared to be responsible according to the acreage of their tenements, 'every acre being equal to every other acre in this region.'⁴ The duty of maintaining Rochester bridge was distributed pier by pier. The Bishop of Rochester was responsible for the first pier, for the planting

¹ P. Q. W., p. 633: 'Abbas et omnes monachi sui et omnes res et homines eorum villani quieti sunt et liberi de omnibus quietanciis supradictis except' de pontagio tamen si per hoc verbum pontagium intelligatur factura pontis quia dicunt quod idem abbas et homines suis facere debent pontem Nottingham qui dicitur le Tounbrigge una cum tota communitate comitatus Notingham'; see also pp. 284, 745, 748. ² Ibid., pp. 284-6, especially 286: 'Per tale servicium quod ipsi contra adventum domini R. predictum deberent circiare omnia loca ubi predicti pontes debent fieri et videre quot bene et sufficienter fient et equitare ante dominum Regem'; cf. Rot. Hund. i. 118.

³ Ibid., p. 284: 'pro pastura habenda ad duodecem animalia.'

⁴ Ibid., p. 466.
of three 'virgates' or rods, and the finding of three 'sullives', and this duty was performed for him by four of his vills. He was responsible for the third pier also, and the other piers were apportioned to others, the sixth being divided among many tenants of sulungs, juga, and acres.\footnote{Lambard's Perambulation of Kent, pp. 415, \textit{et seq.}; cf. Stat. Realm, 21 Rich. II. The old bridge had been destroyed by Simon de Montiort, and by severe frosts in the following years.}

In general, pontage was due from the geldable hides of the county, and might be levied by the sheriff when occasion demanded. Religious houses were usually exempt, but were sometimes, perhaps as a survival of the old bridge-building service, held for the maintenance of certain bridges.\footnote{Rot. Hund. i. 221: 'Et idem cepit et injuste asportavit \textit{xxxvi.} de collectione pontagii Roff' totius hundredi predicti et communie.'} The Templars, for example, were responsible with the community of the county for the \textit{Toonebrigge} of Nottingham,\footnote{P. Q. W., p. 655.} and Ely for the bridge at Alderhithe.\footnote{Rot. Hund. ii. 411.} Within the exempt fees pontage was levied in many cases by the lord of the fee as he might wish, often as a money payment of regular annual amount. In Ramsey pontage was paid by the 'free hides of Hirstingston hundred' and by many of the customary tenants, and the collection of it was a regality exercised by the abbot.\footnote{Rot. Cart. i. 287, 295, 309, \textit{pass.}} The corrupt practices and methods of extortion of lords and of sheriffs are frequent causes of complaint in the Hundred Rolls, and some excellent examples of their evil doings are given. The Bishop of Ely, instead of keeping in repair the bridge and causeway of Alderhithe, a royal way, for which, as has been said, he was responsible, left it \textit{dissolutum} for sixteen years, and established a ferry at which he took a toll of a halfpenny from every horseman and a farthing from every foot-passenger, his receipts being so large that he sometimes let the ferry at farm for as much as 20s. a year.\footnote{Rot. Hund. ii. 411: 'Dicunt quod calceta et pons de Alderhethie est regalis via et fuit fracta et dissoluta jam per sexdecim annos elapsos et debet reparari per Episcopum Eliens' et per tenentes suos.' Other pontages too were exacted by the bishop. The vill of Chatteris paid him a yearly sum to be exempt from extra-
ordinary imposts,¹ and other Ely vills paid *briggebot.*² Much worse offenders were the sheriffs of Cambridgeshire. The great bridge of Cambridge was weak, and whenever it needed repair it was the custom for the sheriff to levy a pontage on the geldable hides of the county. William le Moygne during his sheriffdom took a shilling from every geldable hide, and rendered no account of his expenditure, but repaired only part of the bridge, pocketing meanwhile 40s. passage money.³ Still more extortionate was Robert de Lestire; in his sheriffdom the bridge was broken by a great flood, and Robert allowed it to remain untouched for six weeks and more, making meanwhile a *bargia* or ferry and carrying passengers over for a toll, 'to the loss of the country ten pounds.'⁴ On this occasion, or some other like it, the same unrighteous sheriff made a ferry and took 100s. from it, and in addition levied 15d. pontage on every geldable hide before he repaired the bridge.⁵ Again, he took once a pontage of 2s. from every hide where there had never been taken more than 6d. *ad hidam,* and applied only one-third of the proceeds to the bridge.⁶ When the county forced him, on another occasion, to repair the bridge, he used very light stones and woodwork.⁷ Still again, to bring the tale of his iniquities to a close, he took from the poor men of Barnwell 40s. when he ought to have taken only a mark, 'nor did he ever apply that money to the bridge.'⁸ The sheriff of Lincoln declared that a sound bridge was weak and levied a pontage.⁹ Other sheriffs seized the chattels of individuals and refused to return them until a very high pontage of 16d. had been paid.¹⁰ Sometimes the towns had taken over the maintenance of the bridge and held it at farm.¹¹

With the pontage is often connected the *pavage, pavagium, or paagium*, which is defined in the Liber Albus as the tax levied on horses or vehicles 'for keeping the middle of the street in repair',¹ and appears in the Hundred Rolls, especially in Lincolnshire, as money taken to sustain the paving of the bridge or causeway.² It was levied upon boats, foot-passengers, horses, and carts, and was in these cases a toll rather than a regular impost. Occasionally, however, certain tenements were definitely responsible for the *paagia*, probably as part of their duty of maintenance of bridges.³ With this or murage the old *stangeld* may perhaps be identified.⁴

*Muragium.* Of murage, or the money paid for wall-work, there is less frequent evidence than of pontage. In the Hundred Rolls it occurs usually in the descriptions of Lincolnshire as a common article of inquiry in the wapentakes and as a common burden in the borough. It was granted to the citizens of Lincoln by Henry III, and the mayors collected it for their own uses, through receivers who carried peculation very far. An honest collector who rendered a faithful account is mentioned as an exception.⁵ The money which should have been spent 'ad emendacionem murorum civitatis'⁶ was usually kept for the private uses of the receiver, who on one occasion refused to render any account of his expenditures, beyond stating the amount of his balance and declaring that the rest had been spent on the walls; 'where, however, that money was expended,' the jurors say, 'we do not know, since it does not appear in the walls or in any other works of the lord king.'⁷ Occasionally the term murage seems to refer to the actual stone used in the wall-work, which was sometimes taken unjustly and used for private buildings.⁸ Two receivers

⁸ Ibid. i. 322: 'fecit cariare apud Sanctum Botulphum meliorem
took rock to the value of 100s. from a quarry at Lincoln which belonged to the murage and kept it, and one of them carried to St. Botulph the same excellent stone and made himself a house valued at £20, and with murage and boistagium bought arable land.

**Boistagium.** A rent called *boistagium* occasionally appears, once in connexion with murage, and seems to be explicable as a payment made for wood to be used in public works. One of the franchises often claimed by religious houses, and especially by the Hospitallers, was freedom from requisitions of wood for royal buildings or fortifications. Similar payments were *truncage*, and possibly *bustsilver* and *vodwelschot*, the last a curious rent lingering in the hundred of Northgrenehow in Norfolk, and clearly royal, and the Ramsey *wodehac*, due from free hides of Hirstingston hundred. A *tolnetum buste navium* is mentioned as a royal due at Windsor.

The line between payments like these, for the maintenance of public works and fortifications, and tolls taken on various occasions is sometimes very difficult to draw. The history of tolls forms a subject by itself, or is part of the study of customs revenue or of trade and towns rather than of cus-

tomary rents. *Prisage, strentol, watertol, aquage, ankerage, kaiage, keletol, quarterage, rivage, wharfage, butlerage, lestage, mensurage, pesage, tonnage, tronage, uhiage* have little to do in most cases with ordinary manorial life. Yet the records do not distinguish clearly between regular and occasional sources of revenue, the difference between public and private dues was often lost, and there was, moreover, a constant tendency to put uncertain and occasional obligations *ad certum*, at a fixed annual sum, an arrangement preferred by the lord and apparently acquiesced in by the villata. It might become the ‘custom of the manor’ for almost any occasional due or toll to be paid *ad certum*. The tolls most frequently so converted, to which, in any case, whether as fixed or occasional rents, the villeins were most often subject, were the tolls for passage of one kind or another, and the tolls connected with buying or selling in the ordinary village market.

The most important tolls taken for passage were the following:—

*Cheminagium.* Chiminage was the toll exacted for passage through the forest. To the warden of the forest belonged certain perquisites of office, collected for him by the foresters, among which were fines for lawing dogs, dead and dry wood, collected without an iron instrument, bark and crops of oak, windfall, *cablish*, pleas of little thorns called *bestnaweger*, of those, namely, that ‘cannot be perforated with an auger’, nuts, hens, oats, retropannage, and chiminage.¹ Chiminage was collected from those not living in the forest who passed through it with carts or horses, either for the purpose of carrying goods and merchandise,² in which cases the toll was properly a *transversum*, or for the purpose of collecting from it certain kinds of wood.³ The amount of chiminage due to the foresters is clearly stated in Henry III’s charter: it was 2d. a cart for the first half-year, and 2d. for the second half-year, and a

¹ Rot. Hund. i. 22, 24, 26; ii. 40; Sel. Pleas. For., p. 122.
² Rot. Hund. ii. 848; Burt. Ch., p. 151.
³ Sel. Pleas. For., p. 8; Rot. Hund. ii. 267: ‘De qualibet carecta differente buscam bruercam et turbas de Nova foresta ... unum denarium’; and ii. 233, 248, 249.
halfpenny from a horse for the first half-year and another halfpenny for the second. Usually, however, the foresters took far in excess of this amount; from a poor man with wood on his back, for example, 6d.; from a rich man as much as can be got; from a cart 2s., 3s., 4s.; from a horse with a load 12d., 16d., 18d.; 'to raise the fine which they have made with the chief forester.'

The Hundred Rolls have many references to the unjust tolls levied in the name of chiminage. Thus in Wiltshire the Earl of Gloucester had afforested a large district (totam patriam), probably inclusive of several hundreds, and had put in office foresters who were taking chiminage. Royal foresters were constantly exercising their power unjustly, and long lists of grievances were presented at the eyre. Chiminage was occasionally paid at a regular annual rate by an individual or a villata, and in such cases may be rightly included among customary rents. Thus in Oxfordshire all in the vill of Hensington gave the chief forester 2s. for which they had free chiminage in the forest, for collecting virgae for their ploughs, three times a year, and for collecting old brushwood through the rest of the year. All the villata of Parva Trewe gave the same forester 6d. for chiminage. Occasionally a customary tenant made individual fine for his chiminage. The English form of chiminage was probably weypeny, and in Durham a similar payment made by a vill was called forestagium.

**Thurctol. Thuretol, thurghtol,** variously spelled, was paid

1 Sel. Pleas. For., pp. 8, 125-8.

when merchandise passed through a vill or through the demesne of a lord where there was no common way. Thus the Bishop of Ely took 2d. from every cart passing through his demesne, from every horseload 1d., and from every footload a farthing.\(^1\) *Thurctol* was not justly taken in ‘the common road where every one goes freely’.\(^2\) If manors lay on two sides of a ‘civitas’, and a plough were driven across, *thurctol* was paid.\(^3\)

**Passagium.** *Passagium* was the general toll taken commonly from boats passing under bridges or into and out of ports, and from foot-passengers and carts passing over bridges or ferries. The passage by water was very often obstructed or in some way made the occasion of unjust levies. Thus the passage over the Ouse, once free, became subject to toll;\(^4\) boats going into Huntingdon were impeded by a *stagnum*, where *passagium* was taken;\(^5\) and in Devonshire, especially, many extortions were practised.\(^6\)

Occasionally the *passagium* may have been paid as an annual rent, and may refer to passage through a manor.\(^7\) It sometimes occurs in the Latin forms, *transversum*\(^8\) and *transitum viae*,\(^9\) and in the form *travers*.\(^10\) *Viagium* may be the same toll.\(^11\) *Pedagium* levied on foot-passengers occurs in

lists of immunities. 1 Haleday toll, perhaps a toll levied on a holiday, from those passing along the highway is once mentioned. 2

Other tolls which were sometimes turned into fixed rents, and were in any case closely connected with the customary tenants, were those due in the ordinary rural markets, and at the buying or selling of merchandise or cattle. There were many tolls of this kind, some of which have been discussed already. Goods brought into a town by buyers or sellers were subject to a toll at the gate called Huctol et Dortol; 3 goods brought by strange merchants were subject to scavage, scawyn, ostensio. 4 The most common toll at the market was the stallagium or toll paid for 'stondynge in strites in feyre tyme', for having stalls in markets or fairs, 5 the English equivalent of which was probably the Durham bothsilver. 6 The receipts from stallage were among the large perquisites of markets. 7 Occasionally the villein helped in the construction of booths or stalls as part of his regular work. 8

Pacagium is mentioned in connexion with stallage. 9 Pica- gium occurs, occasionally, as the duty charged on fairs and markets for licence to break the ground or pitch stalls. 10 Many tolls for buying and selling, for weighing and measuring, must often be included in the general teoloneum mundinarum. 11

The instances of special unjust tolls on merchandise and cattle entered in the Hundred Rolls and elsewhere are far too numerous to be given. Travellers were often at the mercy of plundering officers of royal towns and villages, and of extortionate men like the four messors in Lincolnshire who acted for their lords.

Impositions of another kind, very burdensome to the customary tenants, resulted from the undue use of the opportunity of collecting various rents which went with the office of royal or private bailiff. Oppressive measures were especially common in raising farms. Hundreds, whether royal or private, were often put at undue farms, and the burden of raising the sums required, in money or in kind, fell in large measure in the last instance upon the villagers. Examples of unjust exactions are given in the Hundred Rolls of almost every county. Alexander Hameldene, the extortionate sheriff of Bedfordshire, systematically raised the farms; in Buckinghamshire the sheriff held the hundreds at higher farm than he ought, and his bailiffs oppressed the people by collecting sheaves and the like; in Yorkshire and Essex the same custom prevailed. In Gloucestershire a hundred was much oppressed by a multitude of bailiffs; where once there were only five, later the bailiff appointed a sub-bailiff, and the sub-bailiff appointed other bailiffs. In Suffolk, St. Edmund had eight and a half hundreds, and he let them all in most unsaintly fashion at much too high a farm, to the injury of the whole liberty. In Cornwall a hundred, once royal and farmed at £8, became private and was farmed at £40, by the extortion and malice of the bailiffs, and in Kent a lord made a hundred pay 20s. to the Exchequer which he himself should

7 Ibid. i. 172.
8 Ibid. ii. 143, 155, 182: 'Dicunt quod Abbas de Sancto Edmundo tradidit istud hundredum diversis ballivis ad altam firmam per quod populus patrie multum gravatur. Ita quod ubi non reddidit nisi iiiij ori. modo reddit viij ori.'
9 Ibid. i. 56.
have paid.\(^1\) The cry against the bailiffs, royal or private, is insistent enough, and is evidently raised by the men of the vills. The farm, as in the time of Domesday Book, became a burden *quod non potest pati.* Its exact weight upon the vills of the hundred is, however, difficult to measure, and it is difficult also to tell how much of its unjust excess was due to the systematic increase in the rents of which it was composed, how much to occasional exactions from individuals. Certainly out of the profits of the hundred, in some way, year after year, the sum required had to be raised, and when the regular sources of profit proved insufficient, additional ones had to be supplied.

There is special insistence in the Hundred Rolls on the grievance of the collection of rents in kind for the farm, a grievance so common that it suggests for the undue exactions of extortionate bailiffs some basis of ancient privilege of office, some old purveyance rights. The officers of the king should receive their *fastung* like the *festingmenn* of the Saxon Charters, and the *raglots* and *ringilds* and *coidars* of the Welsh law. Food rents had once formed an important part of the *firma comitatus*, although by the thirteenth century they had usually long been commuted. Requisitions of food are mentioned especially in the rolls for Buckinghamshire,\(^2\) Devonshire,\(^3\) Hereford,\(^4\) Shropshire,\(^5\) and Lincolnshire.\(^6\) They were made by sheriffs and their bailiffs,\(^7\) and, commonly, by foresters and constables. In Nottinghamshire the number of *servientes*, and consequently the demands for hay and corn, had been largely increased, to the great distress of the county.\(^8\)

8. Rot. Hund. ii. 307: Where there used to be in a certain wapentake
In parts of Buckinghamshire foresters took money rents from certain manors, undue chiming, hens, oats, retropannage, and dead wood.\(^1\) In Oxfordshire they took poultry 'at the will of the giver'.\(^2\) In one case a private forester took a day's entertainment.\(^3\) Constables of castles were even more extortionate. To a castle might appertain manors,\(^4\) woods,\(^5\) hundreds— to the castle and county of Northampton pertained, once, the shire of Rutland;\(^7\) it was also in receipt of labour services, and of rents of various kinds, in addition to castle guard. To the castle of Marleberg, for example, the hundred supplied men for ploughing, haying, reaping, and carting services.\(^8\) The castle was the prison\(^9\), and it had a court like the tourn,\(^10\) presided over by the constable. Private castles, or royal castles in private hands, claimed privileges like those exercised by castles still royal. The constable had thus great opportunities for extortionate demands which, according to the Hundred Rolls, he was not slow to use.\(^11\) The provision contained in charters of certain

only six 'servientes pedites ibi sunt modo duo bedelli equitantes cum duobus suis gargonibus in le Nordelay et duo bedelli pedites in le Sudclay et duo sunt in Haytfield unde unus equitans et alius ad pedem per quod patria multum aggravatur et maxime ex hoc quod colligunt fenum in fenacione et garbas in autumnno et avenam.'

churches, and of the Hospitalers, that the corn of the Master or abbot shall not be taken for the castle, is usually united with the provision that private wood shall not be taken for royal buildings.\(^1\) Sheriffs and *castellani* are forbidden to "vex the monks, in droves of oxen, or in any other thing, as they have been accustomed to do, but to buy all such beasts in markets as do others coming from afar."\(^2\) The constable had, probably, a fee of his own attached to his office, and personal purveyance rights.\(^3\)

One common method by which foresters, bailiffs of sheriffs, and bailiffs of private lords put money into their own purses was the holding of scotales, or enforced beer drinkings.\(^4\) We can distinguish manorial scotales, on the model probably of those held by king's officers, scotales of the sheriff and his bailiffs, from which freedom was granted by charter,\(^5\) foresters' scotales, holy ales, church ales, leet ales, filsun ales, lamb ales, clerk ales, bread ales, midsummer ales, gyptales, field ales, tenants' ales, bydales, Whitsun ales, Easter ales, bridales, and wetherhales.\(^6\)

The manorial scotales were held on the manor by the reeve at certain seasons of the year, perhaps to celebrate the accomplishment of certain parts of the routine of agriculture. On a manor of St. Paul's the demesne land had to furnish 7d., and the hearth of every tenant of the vill a penny, to a scotale,

\(^1\) P. Q. W., pp. 464, 503, 538, 654; cf. pp. 383, 742; and Rot. Hund. i. 80; ii. 15, 160, 237.

\(^5\) P. Q. W., p. 281: "De chacer ad estab' de scothale Regis et auxilios seu donis viccomitis et ballrorum'."
\(^6\) See Hampson's lists, Med. Aev. Kal., pp. 281, 282, 287, and Ram. Cart. i. 312, 493 (the wetherhale); Hampson quotes (p. 287) 26 H. VIII. cap. 6, which prohibits unlicensed persons from collecting commorth, Bydale, or tenant's ale. Commonth (cf. 4 H. IV. cap. 27) is defined as contributions formerly collected on marriages or when young priests first sang masses (but see Bl. Ibk. S. Davids, and above under *metridie*), bydale as the invitation to drink ale after the manner of a housewarming, and tenants' ale as the feast provided by the tenants.
called elsewhere the scotale of the reeve. On Winchester manors the bailiff is constantly accounting for the wine and cider expended in the scotales. Fuller accounts of the manorial scotales occur in Michael Ambresbury's Rental of Glastonbury. To have a scotale is declared to be the lord's right and duty, and the people are bound to attend. The young men and the married come on Saturday to drink at the Cunninghale; on Sunday and Monday husbands and wives come and bring a penny, and young men on Sunday bring a halfpenny. On Monday night the young men may drink without a fee if they are below the settle. The plena scotalla should last three days, and the free and customary tenants are distinguished from one another by the places assigned them. A villein drank three such scotales, one before Michaelmas, to which he went with his wife and gave 3d., and two after Michaelmas, at which he gave 2½d. Special provisions were made regarding extranei and those in the service of others. The great marling feasts, called gystales in Lancashire, held in the spring after the manuring with marl, yielded to the lord as much as 20s. Hampson's tenants' ale is clearly a manorial scotale of this kind, and so also is the

1 D. S. P., Introd., p. cviii, quoting 1. 65: 'De dominico ad scotallam vijd. et de quolibet astro tenemium ejusdem villae 1d. ad scotallam'; again, p. 144: 'Veniebant homines ejusdem tenementi ad scotallam prepositi.'

2 Winch. Pipe Rolls, p. 20: 'Reddit compotum ... de xxiijs. pro 1 tonello dimidio vini ad scotallam'; again, pp. 41, 52, 55 (scotale of cider), 64 (scotale domini episcopi), 68, 69; also, compare Blead. Cust. pp. 182, 210: 'Manducare debet coram domino in primo die adventus sui.' In this case the tenant was amerced if he failed to eat.

3 Mich. Ambr. Rent., p. 143: 'Homines ... dicunt quod dominus potest facere tres scotallas per annum in Longo Ponte et possunt omnes sponsi et juvenes venire die Sabbati post prandium et potare sicut ad Cunninghale, et habeunt ter ad potandum, et die Dominica sponsus et sponsa venient cum decenario suo, et die Lune similiter. Juvenes vero venient die Dominica cum obolo et die Lune possunt venire et potare libere sine argento, ita quod non sint inventi super summum. ... hoc tantum possunt nativi domini et liberi sui, sed extraneus qui servit aliqui in maniero vel maneant non potest sic facere'; also, p. 108, and Inqu. 1189, p. 112: 'Et debet bibere scotallam domini sicut scotallam vicini'; also, pp. 123, 125, 129.

4 Hibbert, Ashton under Lyne, p. 18.

5 Med. Aev. Kal., p. 287: 'a feast provided by contributions from the tenants of a manor.'
scotale of Kent, the 'shot or contribution of ale to entertain the lord, or his bailiff or beadle, holding a "Parrock"' to take an account of the pannage'.

Another manorial scotale of a different character is that which was given to the villagers by the lord. Of this scotale the Ramsey scythale is a good example. It was the custom in a number of manors on the day on which some special meadow was mown for the mowers to receive 8d. or 12d. from the abbot’s purse for a drinking bout. Mowers usually received some special compensation for work in the demesne meadows; very often it took the form of hay, as much as could be lifted on the scythe without breaking; occasionally a ram or sheep was given. The wetherale of Girton, the lambale mentioned by Hampson, was probably the feasting on the occasion of the presentation.

The bailiff’s receipts from the hundred were sometimes supplemented by money from scotales. In a Winchester manor there was a drinking bout of the hundred, which probably furnishes an example of the hundred ale or leet ale mentioned by Hampson. The field ale was another name for this same custom—a kind of drinking anciently used in the field by bailiffs of the hundreds, for which until prohibited they collected money from the inhabitants (Coke, 4 Inst. 307), and which seems to be the custom so often mentioned in Latin deeds and exemplifications of manorial customs under the name putura or potura. To such a scotale the Liber Customarum refers as the felisonunshale or scotale that small bailiffs extort from the suitors of the hundred. The sheriff of London

6 Lib. Cust. i. 351: 'De parvis bailivis quibuscumque facientibus cervisiam quae vocatur Felisonunshale quandoque Scotale, ut extorquente pecuniam a sequentibus Hundredorum et eorum subditis; see Gloss.'
once had a scotale, which was forbidden later with all other scotaes, except those of such men as might wish to build with stone, so that the city might be secure.\footnote{Red Bk. Excheq, ii. ccxlix; Liber Albus, i. 249: 'Quod omnes sint quieti de Brudtol et de Childwyte et de Jeresgive et de scotale ita quod vicecomites nostri Lond' vel aliquis ballivus scotaes non faciant.'}

The forest charters show that one of the most oppressive scotaes was that levied by foresters. 'Although the charter says that no forester or beadle shall make scotale or collect sheaves or oats or other corn, or lambs or little pigs, or shall make any other collection, yet the foresters come with horses at harvest time and collect every kind of corn in sheaves within the bounds of the forest, and outside near the forest, and then they make their ale from that collection, and those who do not come there to drink and do not give money at their will are sorely punished at their pleas for dead wood, although the king has no demesne; nor does any one dare to brew when the foresters brew, nor to sell ale so long as the foresters have any kind of ale to sell; and this every forester does year by year to the great grievance of the country, and besides this they collect lambs and little pigs, wool, and flax, from every house where there is wool a fleece, and in fence month from every house a penny, or for each pig a farthing. And when they brew, they fell trees for their fuel in the woods of the good people. . . . After harvest the riding foresters come and collect corn by the bushel, sometimes two bushels, sometimes three bushels, sometimes four bushels, according to the people's means; and in the same way they make their ale, as do the walking foresters, to the great grievance of the country.'\footnote{Sel. Pl. For., p. 126; compare Rot. Hund. ii. 249, 253; Reg. Worc. Pr., p. 145 b; P. Q. W., p. 218: 'Et forestarii illi cum veniant ad domum alicujus mane ad petendum puturam . . . quilibet eorum capiit a domino domus illius sex denarios pro putura illius diei et tunc vadunt ad aliam domum et sic ad terciam et ad quartam etc. eodem die et capiit de quilibet domino domorum illarum singuli eorum vj denarios pro putura ita quod capiunt pro uno die pro putura quantum capere debent per sex vel septem dies.'}
CHAPTER VII
ROYAL RENTS: JUDICIAL

Besides serving as convenient occasions for the receipt of payments connected with the geld, the communal courts had a financial value of their own. They were in and for themselves a source of profit, and it was from this point of view, rather than as instruments for the maintenance of order and justice, that they were chiefly regarded by the king's officers and the lords of franchises.¹ When the court was still in the hands of the king financial profit accrued to the crown, when the court was transferred to a private lord, or its competence cut down by the abstraction of suitors or functions, loss to the patria, that is to say, to the crown, resulted, and the land which had been so removed from royal jurisdiction, and from the rents and dues connected therewith, was no longer terra sectabilis, terra geldabilis, terra de corde, or corpore comitatus.² Although county and hundred still served as the basis for the assessment of certain fines and rents—the common amercement of the county, for example, for false judgements given in its courts, and the murdrum fine which fell on the hundred—yet much of their older judicial importance had passed, old rents due to them had become manorialized, and, as page after page of the Hundred Rolls and Quo Warranto Rolls show, suits once owed had been subtracted.³ 'Justice cannot be done in the county unless suitors be there';⁴ but the

¹ See on this point, P. Q. W., p. 560: 'Unde cum predictus abbas ca clamat virtute predictorum verborum in predicta carta Regis Knout infertorum que pocius sonant in cognicione causarum habenda quam in hujusmodi aliquo proficuo percipiendo.'
² Rot. Hund. i. 31; P. Q.W., pp. 118, 305; and compare, ibid., p. 169: 'quod hundredum est quoddam corpus pertinens et annexum coronae domini Regis.'
³ See, for example, Rot. Hund. i. 4, 9, 16, 37, 50, 51, 53, 78, 84, 91, 97, 101, 108, 160, 190, 196; ii. 7, 8, 9, 10, 13, 205, 432, 570, 732; for subtractions from the tourn, i. 51, 53, 87, 97, 157, 434; ii. 432, 448, 508; P. Q. W., p. 733. The examples are endless.
loss of suit was accepted with some measure of acquiescence. More question arose with regard to the withdrawal of suits from the two great meetings of the hundred court, which, since the Assize of Clarendon, had served for the holding of the sheriff's tourn. The financial value of the tourn was great; it was the occasion of the payment of many rents, and the crown was as reluctant to yield the claim to it as were the great lords to surrender their frequent usurpations. The holding of the tourn usually carried with it the right of holding the three-weekly hundred courts, but the reverse is not necessarily true, the right to hold the ordinary courts did not imply in every case the right to hold the tourn, and persons whose suits had been subtracted from the ordinary meetings were still obliged, at the instance of the sheriff, to render suit at the tourn or give the money equivalent. 'The tourn is not a liberty annexed to a manor or a hundred,' the lawyers said, 'but belongs specially to the crown and dignity of the lord king,' and can be alienated only by direct grant.

In multitudes of cases, however, the franchise of the hundred was made to include the tourn of the hundred, or else the right to inquire concerning the articles of the tourn was exercised by the great lords within their manors, whether those manors lay in a royal hundred or in a hundred held by another lord. In Berkshire, Derbyshire, Devonshire, and Kent many hundreds were private, 'ubi nihil aceracere potest domino Regi.' In Hertfordshire, on the other hand, out of seven and a half hundreds, the king had six, the Bishop of London half a hundred, and the Abbot of St. Alban's one. In Buckinghamshire there were in all eighteen and a half

2 Rot. Hund. ii. 227, 745, 828; i. 206—the tourn is excepted from the farm of courts; P. Q. W., pp. 165, 253, 395.
3 Ibid., p. 171: 'Dicit ... quod turnus vicecomitis non est libertas annexa manerio neque hundredo set specialiter pertinet ad coronam et dignitatem domini Regis;' p. 289: 'predictus visus est quodam specialis libertas non pertinens ad shyras et hundredos'; again, pp. 160, 290.
4 Ibid., pp. 81 sqq.
5 Ibid., pp. 152–4.
6 Ibid., pp. 164–5.
7 Ibid., pp. 319, 321, 329, 332, 334, 338; Rot. Hund. i. 200, 218, 223.
8 P. Q. W., p. 167.
9 Rot. Hund. i. 188, 191; P. Q. W., p. 290.
hundreds, all royal, although many liberties had been subtracted from their courts. The claim to the hundred was based usually on a charter freeing the land in question from suits at shires and hundreds. Sometimes, especially in Berkshire, Devonshire, and Kent, it was based on the fact that the hundred was said to be appendent to a given manor which was held by the lord exercising the franchise, but such survivals of ancient arrangements were not usually allowed to pass without criticism by the king's lawyers, who declared that a charter granting a manor was not enough to include the hundred also, since the hundred was larger than the manor, 'hundreda extendunt se ulterius quam predictum manerium.' In still other cases the hundred was claimed on the ground that the lord was hundredarius, that he held, in other words, the bedeleoria or bailiwick of the hundred as appendent to his fee, together with the right to receive all 'pennies which the sheriff or royal hundredarii, or their bailiffs used to receive', but this claim too was rejected by the lawyers on the ground that the office of hundredarius was 'quasi quedam justiciaria, spectans mere ad coronam et non ad aliquid tenementum', and also that the king had the power of appointing 'bedelles' as he would. Elsewhere the hundred was held at fee-farm of the king by the lord, the profit in such cases arising from an undue increase in the receipts. A hundred in Staffordshire, for example, was held at fee-farm from the king for 6 marcs and 6s. 8d., but when

1 Rot. Hund. i. 21.
2 P. Q. W., p. 81: 'Seisiti fuerunt de predicto hundredo tanquam pertinente ad manerium predictum quod quidem hundredum est in eodem manerio et non excedit metas predicti manerii'; and p. 343: the abbot of Faversham claims 'habere in manerio suo de Faversham libertates subscriptas per cartam Regis Stephani videlicet hundredum de Faversham cum omnibus libertatibus et liberis consuetudinisim simul cum omnibus sectatoribus'; also pp. 321, 334, 342. An excellent example is Wye, to which 22½ hundreds were once attached, later seven. Five others were summoned, but Battle got nothing because they had their own ditches; Batt. Abb. Cust., pp. 126, 306.
3 P. Q. W., p. 82.
5 P. Q. W., p. 255.
6 Ibid., p. 174.
the king recovered seisin of it it was assessed at 33½ marcs a year additional.¹ The division of hundreds between the king and lords, or among different lords, was sometimes intricate.²

The classification of the rents and dues that formed the profits of jurisdiction is difficult for several reasons. The constant subdivisions and subinfeudations of franchises and their money proceeds are confusing; the terminology varies in different localities; and last, but perhaps not least, there is a lack of clear definition of the purpose of some of the rents, a vagueness of nomenclature which may indicate that uncertainty as to their meaning and origin prevailed even in the thirteenth century. The most important sources of information are the Hundred Rolls and Quo Warranto Rolls, and there is valuable supplementary material in manorial customs and court rolls. Bailiffs' accounts are less important for this than for other groups of rents, because, as a rule, they do not differentiate the perquisites of courts, except by putting chevage often under a separate heading. In general, the rents and dues which made up the profits of jurisdiction seem to fall into the following classes: commutations of the duty of attending the various courts; rents which probably contributed in some way to the maintenance of the courts; the fines of individuals or groups of individuals placed ad certum, and fines or amercements imposed upon the hundred or county as a whole. This division has been followed in the main in the following discussion, although for convenience the payments connected with the view of frankpledge have been grouped together.

Payments 'pro sectis.' The basis of the distribution of suit of court or its money equivalent among the vills of the hundred, and among the villagers of each vill, is obscure, the records dealing with specific cases in which it was not rendered, and not with the general principles determining its incidence. An interesting description is given in an Ely custumal of the

¹ P. Q. W., pp. 167, 170, 574, 694, 695, 698; Rot. Hund. i. 201.
² P. Q. W., pp. 54, 257, 360, pass.; Rot. Hund. i. 177, 200, 218, 227, pass.; compare Harl. MSS. 1005, f. 70: 'Nota quod si prepositus hundredi capiat gresumam de aliquo libero Dominus habebit medietatem.'
distribution of suits of vills within a private hundred and a half in Norfolk, a distribution which may well represent old arrangements. The hundred and a half of Midford belonged to Ely, and under the vill Shipdham is given a list of the vills owing suit at the hundred, and the amounts of sheriff's aid and forwach due there from some of them, and the money for renewing the pledges from all. Seventeen vills owed seventy-nine suits and a half suit, and of these Shipdham owed seven. The vill of Tynebrigg was infra sedem, but owed no suit.\(^1\) The basis of the assessment of suits and rents is not apparent, but clearly Ely's profit was large.

Within the vills different customs regarding the rendering of the suit prevailed. Sometimes all freeholders made suit or paid the money equivalent;\(^2\) in other cases the attempt to make suit binding on all met with opposition.\(^3\) In still other cases the suit had become attached to certain tenements in the vill—'hundredlands' they were called in Kent, when they made suit at the hundred—whose tenants acquitted the lord of the manor or the rest of the vill.\(^4\) In Hetherste, an Ely manor in Suffolk, one suit was owed at Saint Edmund's hundred of Badbergh, but this suit was divided among three free tenants who were responsible for the fine if the suit were not rendered.\(^5\) In Brandon, Suffolk, one suit was owed similarly by eight parcenarii.\(^6\) A rotatory system prevailed at Bury also,\(^7\) and in Warwickshire a peculiar arrangement

\(^5\) Claud. C. xi, f. 270: 'Et ista et duo alii pares sui simul facient unam sectam ad quedibet hundredum per annum; et si forsan villata inciderit per illorum defaltam tunc idem tres misericordiam acquietabunt.' Cf. f. 209.
\(^6\) Ibid., f. 308: 'secundum turnum septem parcenariorum suorum.' Cf. f. 312.
\(^7\) Harl. MSS. 3977, f. 98: 'Tunc debent quatuor homines ire ad primum comitatum scilicet ad festum S. Michaelis et ad primum hundredum et sic acquietare villam. Et ad alium comitatum ibunt alii quatuor.'
was made by which three rudmanni owed suit at the hundred every three weeks for all the vills of the hundred but Erdington, where the free made suit in person or made fine for it with 19d. The number of suits from customary tenants within the vill was either determined by the number of titheings or acquitted by the reeve and four men, or, in the south, by the decennarius and four men.

The commutation of suit of court for money paid to the sheriff or lord of the manor was obviously a convenience. Sheriffs and lords were glad to put the obligations due to them on a financial basis, and fractions of suit due to the splitting up of tenements could thus be adjusted. The rate of commutation is not easily determined. Sometimes it was 12d. but the amount varied. In the Ely customals there seems to be some indication of the commutation of suit at the shire for a regular rent called syrapeni, or shirepenny, to which the tenants paid according to some system of regular apportionment. In Stratham, Wychford hundred, Cambridgeshire, in which syrapeni was paid, and in other manors in the same hundred, a rent called sixtihepany or sixtepeny is frequently mentioned, paid by free tenants and hundredarii. The custumal of 1222 explains that 'each hide gives de sixtepeny 12d., and owes one suit within every fifteen days at the hundred.' The rent was paid at the hundred or to the bailiff of the hundred. It may have been the commutation of some fractional part of a suit at the hundred by an arrange-

1 P. Q. W., p. 780: 'Et juratores . . . dicunt . . . quod tres rudmanni de Wycnon alternatim faciunt sectam ad hundredum domini Regis . . .'
4 Claud. C. xi. f. 43: 'et dat partem suam de syrapeni secundum portionem scilicet 4d. ad festum S. Michaelis et ad Annunciationem Beate Marie.'
6 Tiber. B. ii. f. 98: 'De hundredariis (holding 24 acres) . . . et dat sixtep' quantum ad eum pertinet quia sciendum quod quilibet hida dat de sixtep' duodecim denarios et debet unum (sic) sectam infra quoslibet quindecim dies et debet precar' arure . . . et dabit gersom.' Cf. ff. 105, 107, where the statement is repeated and the tenant said to be 'tenens de hundredo'.
ment not clear to us, but at the time of the Survey it was paid in addition to the suit. Suit at the tourn was occasion-
ally valued at 4s. for two suits, but there is no certainty in
regard to the amount. Normally the tourn was held twice
a year, but it was the not infrequent practice of sheriffs and
private lords to increase the number of meetings of the tourn
in order to add to the profit. Occasionally only one meeting
a year instead of two is recorded.

**Auxiliun ad turnum, or de turno.** The most important
payments connected with the tourn were those that resulted
in one way or another from the holding of the view of frank-
pledge there, and the attendant franchise of the assize of bread
and ale. In addition to these there seems to have been due
one payment of a more general kind, the object of which is
not clear. This is the payment de turno, or ad turnum, called
the auxiliun debitum ad turnum, and again, the extorsio levied
in the hundred called turnus vicecomitis. Many times a pay-
ment like this made to the sheriff at his tourn is recorded;
for example, the sheriff of Suffolk took ad turnatum suum
40s. where his predecessor took only 20s., in Somerset many
men were not permitted to go to the tourn, nor to give
money, probably two shillings, ad turnum, in Kent the men
of William de Caniso used to give money at the hundred

2 Rot. Hund. i. 63; ‘Dicunt etiam quod idem Rogerus dum fuit vice-
comes turnum suum pluries per annum ubi semel tenere debuit per
annum et amerciabit homines ad voluntatem suam et injuste.’ Also i. 38,
81, 166, 173. Cf. also i. 143, 145, 170, 182; ii. 174, pass. for the tourn as
a means of oppression. For private lords holding the tourn like the
sheriff, see Rot. Hund. i. 113: ‘Dicunt quod ballivi predicti castri semper
postquam illud fuit extra manus domini Regis H. tenuerunt turnos suos
loco vic’ aliquando ter aliquando quater in anno et habent quatuer
bedellos ubi non solent esse nisi duo.’ And i. 53, 111, 132; P. Q. W.,
pp. 6, 253, 308; Claud. C. xi, ff. 182, 254.
3 Rot. Hund. i. 67, 78, 81.
4 Ibid. i. 527.
5 Ibid. i. 223; ‘Et est in eodem hundredo levata quedam extorsio
vocata turnus vicecomitis scilicet xlvs. iiiijd. et valet preterea perquisite
ejusdem hundredi per annum xxvs. salva omni justicia.’ Cf. i. 232.
6 Ibid. ii. 180.
turnum vicecomitis ijs. per annum, scilicet, ad Natale xijd. et ad
Hockeday xijd.’
court at the feast of St. Martin, and other money at the
tourn of the sheriff, and used also to make suit every three
weeks at the hundred and at the two *laghedays* for the sheriff's
tourn. At Kettering the bailiff accounts for 6s. 8d. for
suit, 6s. 8d. for the view of frankpledge, and 18s. 9½d. *de
turno vicecomitis*, and the last rent is assessed at the rate of
5½d. on a virgate. Passages like this seem to show that the
money paid at the tourn was not in any way a commutation
for suit, nor, since the suitors still attended a royal court, in
any way part of a payment made by a private lord for the
right to hold a court. Other passages seem to differentiate
it from the sheriff's aid, with which perhaps one would be at
first inclined to identify it, and from the *hundredscot*, since
the same person makes two payments of sheriff's aid and *ad
turnum*, which are clearly distinguished in name and amount,
and in like manner of *hundredscot* and *ad turnum*. Tithing-
peny and money *ad turnum* are also distinguished from one
another. It seems possible that it was the custom for each
vill or homage to make a payment to the king or his officer
as compensation for holding the tourn, the payment forming
one of the *perquisitae curiarum*, and being in nature not
unlike the hundredscot, or the sheriff's aid, or perhaps the
payment *pro pulchre placitando*. It may have been of not
very definite amount or settled occurrence, and have lent
itself readily, therefore, to unjust increase. It was paid

1 P. Q. W., p. 345: 'Et idem homines proporcionem suam
solebant solvere ad turnum vicecomitis et in omnibus esse gildabiles
domo Regi.' Rot. Hund. ii. 292: 'Dicunt quod vicecomes non facit
turnum suum in dicto hundredo quia capit de dicto hundredo pro turnis
suis xls.' And ii. 31, 728, 730, 731 (Oxon); 230, 237, 245 (Wilts); 291,

comes percipit inde per annum xls. ad duos turnos suos et pro auxilio xjs.
et xjd. de thetinpeny.'
usually as a lump sum by the vill or homage, and its incidence on the individual villager is not usually specified.

**Letefe.** A rent probably similar to the payment *ad turnum* or to the *hundredscot* was the Norfolk *letefe*, taken by the bailiff, according to the Hundred Rolls, *de antiqua consuetudine*, on the day of the leet.¹

**Motfech.** The Shropshire *motfee* was probably the *letefe* under another name.² It is a question whether it was due at all the meetings of the hundred, or at the meetings for the tourn only. It was paid always at the rate of 4d. from one geldable hide.

**Payments connected with the View of Frankpledge.** In most counties the most important and profitable function of the tourn, and the function most often subtracted, was the holding of the view of frankpledge. The rents connected with the view fall into three general groups—first, the payments made in some cases by the lords for the right to exercise the view; secondly, the chevage, which was, in general, the composition for attendance at the view, though sometimes paid by those present; and, thirdly, fines and amercements arising in the view, some of which were paid occasionally, and do not fall properly, therefore, within this study, others of which seem to have been commuted, curiously, into fixed rents.

Payments for the right to hold the view, *pro visu*. The possible relations between the lord and the sheriff regarding the exercise of the view of frankpledge were many. Probably in the majority of cases the private view was not exercised without some definite recognition (usually in the form of a money payment made to the sheriff) of its original character as a regality. Sometimes, however, the view was exercised in the hundred court in private hands, or in the manorial courts of great lords within the hundred, in com-

¹ Rot. Hund. i. 495: *vjs. iijd. quos dominus Rex Henricus pater Regis quinunc est habere consuevit et debuit ad istud hundredum per annum de quodam servicio quod vocatur Letefe.* Also, i. 442, 474, 505, 516, 541, *pass.*
² Rot. Hund. ii. 55: *'1 hide) dat motfey iijd. streward iijd. et sectam facit ad hundredum de tribus septimanis ad tres septimanas.* Also, pp. 58, 62, *pass.* The botfech of p. 63 is probably an error for motfech.
plete independence of the sheriff or his bailiff. The sheriff was not admitted to the view, and no compensation was made to him for the curtailment of the competence of his tourn.\(^1\) The Hospitallers and Templars were often free from interference,\(^2\) as were also some of the honours of the kingdom whose fees, we are told in the Hundred Rolls, paid nothing to the king, and some of the greater lords.\(^3\) The Earl of Gloucester furnishes an excellent example of a great lord, who in certain counties, not always with any just warrant, held very numerous views very freely.\(^4\) Where the claim to hold the view in such cases was based upon a charter freeing the donee from attendance at shires and hundreds and royal views, the king sometimes strove to maintain that freedom from the royal view was not equivalent to the right to hold a view, but that the view was in itself a royal franchise, not to be alienated except by express grant.\(^5\)

Occasional instances occur of the recognition of the sheriff’s right to be present at the view in private hands, where no compensation for the trouble of attending is made to him, either by direct grant of money or by a share in the proceeds of the court. The Abbot of Ramsey is the best example of cases of this kind. He summoned to his views in Cambridge-shire and Huntingdonshire the royal bailiff ‘ad videndum quod visus franciplegii rationabiliter fiat in curia’. If, however, the royal bailiff did not come, and the mere love of seeing justice rendered would rarely bring him in cases where no profit was to be had, the abbot held the view without him.\(^6\) Again, the

\(^1\) P. Q. W., p. 308: (The Abbot of Peterborough) ‘clamat habere ... visum de omnibus commorantibus in predictis villis et tenet visum sumum bis per annum et sine presencia servientis Regis. Et nichil dat Regi pro visu habendo.’ Also, p. 253, and Rot. Hund. i. 113, 132.

\(^4\) Rot. Hund. i. 2, 23, 32, 41; ii. 332, 562, 740; P. Q. W., pp. 253, 348.

\(^5\) P. Q. W., p. 242: ‘Et W... qui sequitur pro domino Rege dicit quod predicte libertates de visu et weif suntm ere ad Coronam domini Regis spectantes contra quam Coronam nulla longi temporis præscripcio locum tenere debet...’

\(^6\) P. Q. W., p. 104: ‘Quod predictus dominus J. Rex concessit predictis Abbati et monachis visum de franco plegio. ... Ita tamen quod ballivus Regis per sum’ ejusdem Abbatis veniat ad curiam ipsius abbatis ad videndum quod visus franciplegii rationabiliter fiat in eadem curia.'
sheriff of Oxford came once a year to Spelsbury, if he wished, to hold the view, but he took nothing away, nor did he eat, nor was he entertained there, except by courtesy.\(^1\) In the Quo Warranto proceedings for Huntingdonshire the king’s lawyers, to meet conditions like these, take the extreme ground that the view can never be rightly exercised without the king’s bailiff.\(^2\)

Much more common are cases where the sheriff received a compensation from lords exercising the view in their manors or hundreds, in the form either of a definite sum of money, or of a share of the profits of the court. Very important people sometimes entered into such arrangements with the sheriff. A long dispute is recorded regarding the barony of Bedford, for example, in which it appears that the barony held its views by the payment of 40s., and in which the further question arises whether two views within the barony, which were held of the barony by certain individuals by the annual payment of 12d., could be distrained to make up a deficit in the 40s.\(^3\) The Abbot of Waltham summoned the royal bailiff for his views in Cambridgeshire, as did the Abbot of Ramsey, but paid 2s. a year to the king whether the bailiff appeared or not.\(^4\) In many cases where money was paid for the view,\(^5\) it was the custom for the bailiff of the king to sit with the lord’s bailiff at the court,\(^6\) and to receive either a fixed sum,\(^7\) or a share of the amercements,\(^8\) or both. The Earl of Gloucester had an arrangement for certain Oxfordshire manors, whereby the bailiff of the king was to receive one half the amercements of the tourn, and his own bailiff the other half.\(^9\) Sometimes it is stated expressly that the sheriff is to attend the court, si predictus bailivus ad rationabilem sum’ predicti Abbatis in curia ipsius Abbatis non venerit quod predictus Abbas nichilominus faciat visum.’ Compare pp. 234, 249, 302, 393; Rot. Hund. ii. 458, 472, 514, 523.

\(^1\) P. Q. W., p. 723.
\(^2\) Ibid., p. 292: ‘... quia nullus visus teneri debet nisi in presencia servientis Regis.’ Again, p. 294.
\(^3\) Ibid., p. 58.
\(^4\) Ibid., p. 106.
\(^5\) Among many such cases the following may be noted: Rot. Hund. i. 4, 5, 7, 20, 31, 53, 172, 173, 182, 188, 191; ii. 321, 323, 325, 326, 330, 339, 548, 553, 554, 556, 559, 562, 563; P. Q. W., pp. 91, 93, 295, 297.
\(^7\) Rot. Hund. ii. 44, 323.
\(^8\) Ibid. i. 278, 287, 296.
\(^9\) Ibid. ii. 736. Cf. ii. 272.
and receive a sum of money, but is to take no share of the amercements. Very occasionally the lord received the fixed sum, and the sheriff the amercements. Sometimes still other arrangements were made; the bailiff, for example, received an allowance of food. Occasionally the lord held a private view after his men had attended the tourn, or unduly increased the number of views. Divisions of the profits of the view between private lords occurred, but were sometimes questioned by the king's lawyers, since they were in the nature of subinfeudations of franchises which were not recognized by the crown. In cases where the lord held his view freely, without payment, he sometimes still rendered suit, or its equivalent, at the sheriff's tourn in the hundred. Thus in Bedfordshire 2s. a year was paid to the king for the right to hold the view, but all the franciplegii within the view went once to the hundred court and there presented all the articles of the view, and gave the 2s. to the sheriff with their own hands. The admission before the king's lawyers of the obligation to attend the tourn in addition to holding the private view was, however, dangerous, because the king's lawyers did not hesitate to declare that such an admission was a recognition of the king's seisin of the view, although

1 Rot. Hund. ii. 478: 'Ballivus nichil asportabit de amerciamentis.' Also ii. 481, 733.
2 Ibid. ii. 718.
4 Ibid., p. 783: 'sed dicunt quod postquam ballivus domini Regis fecerit turnum suum et tenuerit visum idem Richardus per injuriam tenet de tenentibus suis aliam curiam de visu franci plegii.'
5 Ibid., p. 312: 'Quod ipsi usi sunt tenendi visum franciplegii ad curias suas de Westerham de tribus septimannis in tres septimanas ... Inhibitum est eidem Abbati per justic' ne ulterior abutatur libertate illa et quod teneat visum predictum de cetero bis per annum tantum,' &c.
6 Ibid., p. 262: Liberties are claimed by the grant of Edmund Crouchback, but the king's lawyer replies that Edmund is 'privata persona non habens potestatem aliquem feoffandi de libertate visus franci plegii ... nec de aliquibus alius regii libertatibus.' Cf. p. 297; also Rot. Hund. i. 51; ii. 464.
7 P. Q. W., p. 68: 'Et dicit alterius quod ipse reddit domino Regi per annum duas solidos pro predicta visu tenenda in forma predicta. Ita quod omnes franciplegii infra visum suum predictum quotlibet anno ad hundredum Regis ... conveniunt et omnes alios articulos ad visum spectantes ibidem presentant et denarios predictos ballivo Regis per manus suas persolvent.' Also pp. 50, 170, 179.
8 Ibid., p. 248: All presentments arising infra villam are made at the Abbot of Gloucester's view, all arising extra villam at the tourn. It is
they thus went far towards reversing, conveniently, the argument used elsewhere, that the tourn or view was a separate privilege not necessarily connected with the hundred.¹

The impression gained from the perusal of the Hundred Rolls and Quo Warranto proceedings is that of constantly attempted encroachments on the part of private lords, met, not always by any means unsuccessfully, by efforts on the part of the sheriff to prevent such encroachment. Loss, inevitable in one place, was sometimes met by unjust extortion in another, the sheriff also, like a private lord, extorting unjust dues from his shire, and retaining money for himself. A passage like one in the Hundred Rolls in which certain lords wish to give back a half hundred to the king because they cannot bear the expense of pleading is unusual.²

The money necessary for the payment to the king must have been derived by the lords from their villages, probably from the perquisites of the courts held there. It is a general payment, and difficult to trace among the villages, unless the payment pro visu, frequently mentioned as paid by individuals, may be considered as always made for this purpose. In Staffordshire there seems to be evidence of a somewhat regular system of the levying of one shilling on the geldable hide.³

The second class of payments made to the lord at the view includes the common chevage, capitagium, headpenny or havedscot; the tithingpenny, or money, in the Latin form, paid de decenna; frithsilver, fricsilver, or fripenni; the borghes-ealdorpeni of Kent, and probably the bornsilver or borchsilver of Essex. These payments were connected in some general way with the appearance at the view of men within the tithings and the renewing of pledges, but the exact connotation of the terms probably varied somewhat in different localities and at different times.

The composition of the court held for the view, and its

procedure, has been discussed by Professor Maitland, and it is not necessary to repeat his conclusions regarding the double system of presentment within the court by the representatives of the vill to the body of twelve or more freeholders, and the two systems of representation, or appearance at the view, by the capital pledges of the tithing, or by the reeve and four men of the vill, or sometimes where in the south the tithing was territorial by the decennarius and four men, or by the reeve and four men, and the capital pledges concurrently. The question that is important in a study of the financial aspects of the view is, rather, for what purpose was chevage paid, and by whom, and what relation do certain other payments made at the view bear to chevage? Chevage was given, in the first instance, by the capital pledges for the other men in the tithing, that they might not all come, 'pro illis qui sunt in decenna ne omnes veniant'. The rate at which it was paid was usually, as the English form headpenny indicates, a penny a head; but sometimes the idea of the householder was introduced, and a distinction made between the husband, the married man with a hearth and a family, and the unmarried man. The one paid usually a penny, the other a halfpenny; but at Peterborough a man paid a penny and a woman a halfpenny, and on the manors of St. Paul's a man with a wife or a home paid as much as 2d. because he took wood and water, whereas an unmarried man paid only a penny. Boys of 'full age', over twelve, or eighteen, paid their chevage, or attended the court, and the duty fell in some form upon

2 Ibid., p. xxx: 'The duty of appearing seems to have been very generally commuted for a small money payment, head money, capitagium, chevagium, a sum paid by the frank pledges ne vocentur per capita.' And, quoting Roll Augment. Off. P. 34, No. 46, m. 4 d.: 'Capi tales plegii et eorum decene nichil dant ad capitagium; ide vocandi sunt omnes per capita.' See Ram. Cart. i. 491; Rot. Hund. ii. 656; and Sel. Pl. in Man. Cts., p. 91, for the excellent case of John de Elton and his tenants.
3 Chron. Petrob., p. 163.
4 D. S. F., pp. 81, 144, 154*, and 83: 'Et si habent uxores iijd. de havedsot quia capiunt super dominium boscum et aquam et habent exitum et si non habent uxorem vel uxor virum dabit unum denarium.'
all the members of the vill. Large freeholders levied it from
their under-tenants, and unless they retained it for themselves,
paid it over to the lord. Ordinary custumarii, husebondi,
virgaters, cottars, crofters, all paid it.¹ In one curious case
mentioned in the Peterborough records it was not paid by the
servi, probably because they were in the mainpast of others,²
and an occasional exception was made in the case of those
who, as an Ely custumal puts it, were in the service of their
fathers or mothers, for whose good conduct the householder
was responsible.³ Once it had apparently become attached to
a tenement; the person that held a certain pightel paid it.⁴

Although chevage was thus in its simplest form a personal
payment, rendered to secure exemption from the view, its
original character became apparently sometimes transformed,
or at least obscured. It appears in some cases as a fixed
annual rent, certus redditus, paid by the vill, tota villata, no
allowance being made for necessary variations from year to
year.⁵ In this sense, perhaps, it was sometimes called cert
money.⁶ The lord was desirous of reducing it, like other
variable rents, to a certain basis, and hence it was placed ad
certum or even sold, venditum, to the villagers,⁷ as the phrase
goes, at a fixed amount. Moreover, the money payment
being secured by custom, the actual presence of those paying
it was required at the view, 'the tenants of land shall come per-

¹ For example, Rot. Hund. ii. 630, 849, 858; D. S. P., pp. 83, 145;

a marc or a fraction of a marc.
⁶ Crondal Records, 377, 383; Hone, Manor, 147, 156, 157, 158.
sonally, and nevertheless they shall pay their pennies,' and if they do not come they are heavily amerced.\(^1\) Thus a certain villata gave every year on the day of the view 10s. through the capital pledges that it be not 'occasioned', and for the absent that they should not be amerced, while it was sworn that they were keeping the peace; but now, the record states, the 10s. are enrolled, \emph{inrotulati}, and paid like a rent, \emph{inrentati quasi redditus}, and the seneschal nevertheless \emph{currit ad occasiones}, and amerces the capital pledges heavily for those that are absent and desires that all be present on the day of the view, or, on pain of amercesment, at the next court, wherever they be, whether in service, or elsewhere, even if they be beyond the sea.\(^2\) Sometimes there seem to be indications of a theory that the chevage or \emph{de certo} rent was a commutation for presence at the three-weekly meetings of the halmote, but that attendance at the great view was still required.\(^3\) Not only was the presence of all at the view of frankpledge required under pain of amercesment; it was also apparently the custom for those that came to pay in addition probably to the chevage or \emph{certus redditus}, and to the amercesments of those absent paid by the chief pledges, a penny 'for the renewing of pledges'. In the Quo Warranto Rolls it is stated that a view is to be held and payments made in the following manner: At Hokeday all resident in the given lordship shall come together, and inquiry is to be made concerning those that are in tithing and also concerning those that have not appeared, by name. From

\(^1\) Rot. Hund. i. 6: 'Item dicunt quod visus franci plegii tenetur ... et tunc tenentes terre venient personaliter et nichilominus solvunt denarios et absentes qui non habent terram mittunt argentum et sunt quieti.' And i. 8, 15, 259, 456; ii. 631; P. Q. W., p. 349: 'ad duas laghedays per annum per unumquodque capud plene etatis.'

\(^2\) Ibid. i. 8: 'Dicunt ... quod villata ... sollebat quolibet anno die visus dare xs. per capitul' sine occasione ostendendo et pro absentibus ne gravarentur dum testificaretur quod essent boni modo inrotulati dicti x solidi et inrentati quasi redditus nec tenent locum ville quia J. ... seneschallus ... nichilominus currit ad occasiones et decennarios pro absentibus graviter amerciat et vult quod omnes sint presentes die visus vel quod veniant ad proximam curiam ubicunque fuerunt in servicio vel alibi etiam si essent ultra mare vel ammerciabuntur.'

\(^3\) Rot. Hund. ii. 849; P. Q. W., pp. 341, 344, 349; Ram. Cart. i. 369: 'Et per predictum hevedpeny quieti debent esse a secta omnium haltedorium per annum praeterquam duorum.'
each person present a penny is then to be taken, and the absent are to be amerced.¹

¹ The pennies taken from those present' were sometimes called chevage;² but perhaps more accurately and commonly, the money for renewing the pledges, tithingpenny, in its various forms, or frithpenny or frithsilver, the money for keeping the peace, or perhaps recognition money, money paid de recognitione custumariorum.³ It is, however, often very difficult to tell from the rolls and custumals whether forms like tithingpenny and frithsilver apply to the original chevage, or certus redditus, paid by the capital pledges, or to the payment made by those that attended for renewing pledges. Sometimes, too, there seems to be an identification of the de certo payment with the money paid pro visu,⁴ and in other cases the pennies of those present are regarded as pro pulchre placitando.⁵ It is possible there may have been some looseness of nomenclature, and the meaning of the rent may have varied with the locality and the date. In general the forms chevage, capitagium, headpenny, headsilver (hefsulver), denarii capitales occur very commonly in Huntingdonshire, Norfolk, Gloucestershire, Berkshire, and in the Burton manors in the north.⁶ The form tithingpeni, tygenpeni, theginpeni, tynpeni, thcinpeni, and the like, the penny paid de decennia, occurs especially in documents relating to manors in Bedford-

¹ P. Q. W., p. 50: 'Quolibet anno super le hockeday omnes infra dominium suum residentes ibidem conveniant et per eosdem inquiratur quales et quanti (sic) residencium predictorum qui in decenna ponendi sunt et non ponuntur. Et eciam de nominibus eorum qui eodem die non comparuerint ibidem. Ita quod de quolibet comparente unus denarius capiatur et quod absentes amercientur et simuliter si quis etatis duodecim annorum extra decennam inveniatur quod tunc ille sub cujus manu-pastu fuerit amercietur pro eodem.' Repeated ibid., and compare pp. 58, 68, 69, and Rot. Hund. i. 259: 'Et ad illum visum fraunplegg' non solebant amerciari nisi absentes et quatuor annis elapsis levaverunt novam consuetudinem ita quod capiunt quolibet anno tres marcas de sectatoribus illius franci plegii injuste pro pulere placitare.'

³ For example, Rot. Hund. ii. 631.

⁵ Rot. Hund. i. 136, 259.

⁶ For example, P. Q. W., pp. 250, 293; Rot. Hund. i. 77, 83, 95, 96, 196, 524; ii. 629, 639, 656, 666, 726, 835, 843, 858, 860, 875, 876; Burt. Ch., p. 57; Norwich Vac. Roll, 1141/1; Min. Acc. 742/17-19.
shire, Gloucestershire, Wiltshire, Southampton. 1 Frithpenny, frisilver, fripeni, is found especially in Buckinghamshire and in the manors of Lichfield and Burton, being the money for keeping the frith, or peace, 'pro conservanda pace.' 2 Still other forms of the rents are derived from the word borgh, or borgha, the equivalent of tithing. Thus the Kentish tithing is called a borgha, its capital pledge the borghesealdor, and the chevage payment the borghesealdorpeni. 3 The Kentish material throws some light on the working of the borgha and the functions of the borghesealdor—he was elected by the borgh, 4 he had the custody of prisoners suspected of theft, and with his borgh he presented offenders at the hundred. 5 He followed the three-weekly hundred occasionally with several men of his borgha, but the law-days he followed with all the tenants over twelve or fifteen years. 6 The Cambridgeshire and Essex bornsilver, borpeune, borsilver, is defined in a Bury St. Edmunds custumal as the penny for suit paid to the court at which 'they renew their pledges'. 7 The bortreming or

1 For example, P. Q. W., pp. 27, 28, 72, 257; Rot. Hund. ii. 221, 236, 237, 245, 260, 273, 278, 669, 842.
2 Rot. Hund. i. 41, pass. in the county; Brewood, Lichfield Manor, p. 14; Burt. Ch., p. 94. For Fricsilver see Rot. Hund. ii. 838; Fripeni, D. B. Add., 539. The 'frith' corresponds to 'by-law'. The Durham Halmo	
t Rolls contain many references to the maintenance of the frith, or freth; for example, p. 16: 'Preceptum est omnibus quod servent frithes sub poena 25'; p. 17: 'Preceptum est omnibus villae quod servent frithes in blado pratis pasturis et semitis et quod nullus eorum sit contrarius aut rebellis vicinis suis'; p. 123: 'Et injunctum est omnibus tenentiis villae quod quielibet eorum veniant (sic) pro freth', birlaws, et aliis commodis et pro fizzis dictae villae ponendis, ad praemunicionem dictorum praepositorum.' Also pp. 13, 50, 101, 102.
4 Rot. Hund. i. 212: J. distrained 'ut esset borgesaldre sine electione borge sue'.
bortreminium of Suffolk seems to be another word for frank-pledge, and perhaps the boreupeny also may be connected with it. In immunity lists borphalpeny is mentioned in Derbyshire, Essex, and Bedfordshire, and bornewing in Yorkshire, and elsewhere.

Notwithstanding the uncertainty regarding the exact meaning of the various terms used to denote the rents paid at the view, a general process of development seems to be evident, the setting of rents, in the beginning generally occasional in nature, ad certum, and the later enforcement of the original service for which the rents were an equivalent, together with the requirement of new rents connected with that service. An analogous process may be observed in the development of boon services. But the payment of chevage involves another question also, the question of the stability of the manorial population. Where are the men of the tithing who do not come to the view, and why is their attendance compounded for by chevage, or by amercements? It seems probable that allowance must be made for two general classes of persons paying the original chevage or commutation of appearance at the view, those within the manor who did not go to the view because their attendance was inconvenient and unnecessary, and those, for one reason or another, outside the manor. It seems probable that the first class must be allowed for as well as the second, and that, therefore, for this reason, as well as because of the difficulty of knowing the exact connotation of the word, the appearance of chevage cannot be taken as necessarily indicating residence outside the manor. Besides the resident householders who paid their chevage and were represented by the capital pledges at the view, there is often indicated in manorial documents a large number of men, usually not landholders but holding a subordinate position to the customary tenants and free tenants, whose households in a sense they form. Having no land they do not often appear

as a separate class in the custumals, whose divisions are usually based on landholding. They must, however, with the cottars and crofters and lesser men, especially of the older enfeoffments, have formed an important part of the working force of the manor. The Glastonbury records and Ely chartulary of 1277 give especially clear evidence of this class of men, the undersetles, the anilepimun and anilepiwymen who may ‘remain’ on the land of the bishop, or on the land of some customary tenant (‘aliquus custumariorum’), who may or must not have a house in the vill, or who may or may not be in the service or mainpast of some one, perhaps of their fathers or mothers. While it is clear that these men must often have been resident on the manor in which were their chief pledges, it is equally clear that it is among them that the greatest amount of movement to and from the manor must be expected. They were the freest, least attached part of the population, the floating population, from among whom hired labourers would be gradually appearing. Of the same general character were also probably the different ‘grades’ of selfods, appearing at Durham and at Tynemouth, Yorkshire. The halliwimen, or reapers at the harvest in

2 Claud. C. xi, f. 60: ‘Unusquisque anlepiwyman et anlepiwyman manens super terram episcopi debet metere unum sellionem in autumpno sine cibo et consuetudine que vocatur luvebene et similiter unusquisque coterellus manens super terram episcopi vel super terram aliiquis custumariorum suorum metet unum sellionem eodem modo.’ Also f. 312: ‘Et sciendum quod unusquisque undersetle vel anilepimun vel anilepiwyman domum vel bordam tenens de quocunque illam teneat inueniet unum hominem ad quamlibet trium precariarum autumpni ad cibum domini. Item sciendum quod unusquisque anlepiwyman non habens ali quem mansionem in villa sive sit in servicio sive non, inueniet unum hominem.’ And ff. 29, 42, 80, 85, 191.

4 Mon. Angl. iii. 315: ‘Omnes illi qui terras tenent et tofta . . . omnes selfodes.’
Nottinghamshire, the Bury pokeavers, the Ely pocarri and cumeling, the gresemcen of York, and the curious landlesemcen of Ely, who hold tenements. The Ely chartulary shows especially clearly the movement in this class of population: it states that cottars, undersetles, and anilepimen, the workers at the harvest boons, for example, are ‘innumerabiles . . . quia quandoque acrescunt et quandoque decrescunt,’ and it shows that from most of these anilepimen chevage was due. A penalty of 20s. was incurred at Durham by leaving the village in order to reap for others than the lord and his tenants. The attempt to keep the chevage of the migrating portion of this class of men within the manor must have been attended with difficulties. The records give evidence, however, of the obligation of men who ‘remain outside the houses of their fathers’ to pay their chevage with their old tithing, and they indicate the actual receipt of such chevage in what must be a fair proportion of cases. The absent members of the tithing would also, of course, but probably less frequently, have included men of better status, often resident in other manors or in towns. The expert artisans of the account rolls, the carpenters, threshers, winnowers, who are paid ‘ad suos adventus’, form an interesting and highly respectable section of this fluctuating population.

A difficulty arose concerning the chevage and other

perquisites of the view coming from another class of men commonly mentioned in the Quo Warranto proceedings. These are the scattered tenants of certain lords, who reside singly or in very small groups in diverse vills, but who do not exactly reside on the fee of another lord, since their tenements are part of the fee of their own lords. The pleadings concerning the view over such men is interesting. It was maintained by the king’s lawyers, for one thing, that vill and view of frankpledge went together, that in order to have a view in a vill the lord should hold the whole vill—manor and vill, in other words, should be co-terminous, and a view for fractions of a tithing or for one or two tithings in a vill was illegal. Men in the vill should make presentments with their neighbours of the vill, and not with the extranei of other vills. Such a theory seems to point to the belief, in the minds of the lawyers of Edward’s reign at least, that frankpledge was in origin an arrangement for the administration of the vill rather than of the manor, the original presentment at the hundred being made by the vill and not by the manor. The actual contraventions of this theory were, however, very numerous, although perhaps in some cases fairly recent at the time of the pleadings. The worst, and most instructive, offenders, were the Templars, who had acquired in many vills very small numbers of tenants. In Bedfordshire, for example, ‘in aliqua villa non habet (the Master), nisi duo tenentes in aliqua tres vel quatuor.’ In Bollestrode in Buckinghamshire ‘non habet villam integram sed tantummodo collectam et Bollestrode non est villa sed tantummodo quoddam manerium’, and again the Hospitallers held no vill, but only in some

1 P. Q. W., p. 294: ‘Et Simon venit et dicit quod habet in predicta villa duodecim tenentes tm de quibus clamat habere visum . . . bis per annum et sine presencia servientis Regis. Et nichil dat . . . Et G. qui sequitur pro Rege dicit quod non potest gaudere predicto visa desicet non est dominus ville nec habet villam integram’; also pp. 295, 673.

2 Ibid., p. 681: A special statement made by defendant that suit is due not from vills but from men and tenants: ‘Preterea dicit quod secte fieri non possunt per villatas set per homines et tenentes suos.’

3 Ibid., p. 673: ‘Et preterea dicit quod predictus Prior habet tenentes suos in diversis vills qui presentaciones ad Coronam Regis spectantes facere deberent cum vicinis suis propinquioribus et vicini eorum cum ipsis et non cum extraneis de aliis villis’; cf. pp. 85, 98, 244, 293, 294, 392.

4 Ibid., p. 89.
places a half vill, in others a quarter vill, in still others only four or five tenants, 'nec est juri consonum quod visus fiat de hujusmodi collecta.'

The practical objections to such customs are clear. It was not worth while to hold a view in the vill in question for so small a number of tenants, while it was inconvenient for them to attend views held at a distance. The lord, moreover, had no judicialia, tumbrer or pillory, in the vill where he had few tenants. The result was, necessarily, that the tenants' chevage was paid, instead of attendance, and that in many cases their offences were punished by fines instead of corporal punishment. Their position in matters of justice must thus have been somewhat anomalous, and their chevage was often lost entirely. Such men, the king claimed, should properly attend the tourn. An instructive case in point is recorded in the custumals of Battle. Certain men belonging to the manor of Brithwolton in Berkshire dwell in Covenholt in Hampshire. They do not perform services because they have augmented their money rents, but the ordinary tests of villein status apply to them. One of them, however, pays no rent himself, but it is said that the other tenants divide the payment of the two shillings he would owe normally among themselves, in order that he may defend them against evilly disposed natives (patriotas) of the county. The chevage of men in the tithings of weak lords, or loosely attached to a view, like the men of Brithwolton, or remote from their lords, was naturally enough a tempting bait. It was the well-known custom of the Hospitalers in Devonshire, for example, to 'attract men' into their tithings by promising them a share in the freedom from toll in the kingdom which was their privilege. They put their crosses on the new tenant's doorway, and then pocketed the chevage and other profits arising in the view.

W., p. 251: '... quae levavit signum hospitium in quoddam domo in Wynecumbe quam Thom' Nightigale et Elena uxor ejus tenent... Et super hoc venit predictus Thomas et requisitus quare permisit predictum Priorem predictum signum in domo sua levare dicit quod non permisit hoc gratis levari set quia nitebatur predictum signum proternerre implicabat ipsum coram conservatore suo et ibidem extorquebant ab eo xs.'
Templars took the penny *de advocaria* from men in Sussex who were not properly their tenants, but on whose shops and houses they had put their sign.¹

The third great source from which profit came to the sheriff or lord who held the view, the fines and amercements arising therein, does not at first sight seem to fall within this study, since such payments would naturally be made on the occasion of the offence by the individual offender, and would not therefore be customary, regular obligations resting upon the members of the manor. Many fines were necessarily occasional, it is true; but with regard to some of the minor offences which were presented at the view of frankpledge a very curious custom prevailed in some localities. Occasional fines for such offences as trespass, breach of manorial custom in regard to agriculture, and the like, or breach of the assizes of bread and ale, were changed, in some cases, into customary fines, the burden of the responsibility being shifted in large measure from the individual offender to the vill as a whole, and the lord becoming assured of at least a certain amount each year from fines imposed by his court. By a fixed annual payment, paid according to some definite system of assessment by all or certain members of the villata, the men of the vill were allowed to insure themselves either against corporal punishment for minor offences, or against ever having the fines for certain specified misdemeanours exceed a certain amount. The custom is difficult to understand clearly, especially since it seems to have been confusingly connected or identified sometimes with other payments of an apparently different character. The clearest cases of its occurrence are on certain of the manors of Ramsey Abbey in Bedfordshire, Cambridgeshire, Huntingdonshire, and probably in one case in Hertfordshire, where the rent is called *fulstingpound, filstinpund.*² In the extent of Cranfield, Bedfordshire,³ we are told

¹ Rot. Hund. i. 96: ‘Item dicunt quod Hospitallarii assumunt diversos homines per chevagium.’
² The forms *filsinale, felisonunhale, feisten, and filsingerthe* should be compared with *fulsting pound, or filstinpund.*
³ Ram. Cart. i. 441: ‘Villata dat ad viginti solidos, qui dantur, quod cum aliquis cadat in misericordia domini, det ante iudicium sex denarios,
that the villata gave 'to the 20s.' which were paid in order that, when anyone fell in *misericordia domini* he should give 6d. *ante judicium*, and 12d. *post si expectet judicium*, unless the offence were theft, or any great transgression. Not all contributed to the 20s., however, as the extent goes on to say, and not all made fines for offences in one and the same way. Tenants of hided and unhided land, virgaters, and cottars, are recorded as contributors to the 20s. In another extent of the same manor it is stated that all the villata except the free give at the feast of St. Andrew 20s., which is called *filstinpound*, and by this payment they are free from all fines and penalties, before judgement for 6d. and after judgement for 12d., except from the fines for shedding blood, cutting oaks, and theft. In Shitlingdon, Bedfordshire, there is a slight difference in the form of the statement. A virgater pays 4d., a half virgater 2d., and a crofter in proportion, yearly, at the feast of St. Andrew, in order that, being accused of some transgression in his agricultural services, such as ploughing or reaping, he should be amerced 6d. before judgement, 12d. after it. If his offence be more serious, shedding blood, rape, or taking of oak wood, he makes the best terms he can with his lord. In this manor it seems probable that a 20s. to accord with the *filstinpound* has been divided, originally, among the members of the vill according to their tenements. In Barton,

& post, si expectet judicium, duodecim denarios, nisi sit pro furto, vel aliqua maxima transgressione. Scienium quod non omnes dant ad viginti solidos, et ideo non omnes sunt facturi finem de misericordia uno et eodem modo. And (ibid.) a half-virgate *extra kidam* pays 'ad viginti solidos qui appellantur fistin-pound.' See also pp. 439, 442.

1 Ram. Cart. ii. 22: 'Tota villata praeter liberos, dat in festo Sancti Andreae viginti solidos, qui vocatur fistin-pound; et per hoc quieti debent esse de omnibus miserictordis, ante judicium pro sex denariis, et post judicium pro duodecim denariis, nisi pro effusione sanguinis, vel pro excisione quercus pro furto.'

2 Ibid. i. 464: 'Ad festum S. Andreae dat quatuor denarios ut super transgressionibus operum convictus, ut arurae, messis, et aliorum hujusmodi, ante judicium amercietur sex denarios, post judicium duodecim denarios. Cum autem super sanguinis effusione, raptu puellarum, et captione querc', que apertionem de restingwymbes possit sustinere, fuerit convictus ratione delicti, prout melius possit, gratiam petit domini.' Cf. pp. 466, 467, 468, 470, and especially 473: 'Si vero convictus fuerit, quod debito modo ad molendinum domini sectam non fecerit, ante judicium dabit sex denarios; et si judicium sustinuerit, dabit duodecim denarios.'
another Bedfordshire manor,\(^1\) all the villata but the free paid 30s. \textit{ad fulstingpounde} on the feast of All Saints. In Burwell, Cambridgeshire, the payment appears by name as \textit{fulstingpound}, with the rate at which it was paid, 24 acres with croft, 16\(\frac{1}{2}\)d.,\(^2\) 20 acres with toft, 14\(\frac{1}{2}\)d.,\(^3\) one virgate 21\(\frac{3}{4}\)d.,\(^4\) 8 acres 5\(\frac{1}{2}\)d., 12 acres 7\(\frac{1}{4}\)d.\(^5\) In Elton, in Huntingdonshire, the \textit{fulstingpound} of 13d. a virgate is mentioned,\(^6\) and in Therfield in Hertfordshire\(^7\) a half-virgate gave 6d. to 'the pennies which are called the twenty shillings'. The occurrence of the payment, clearly defined like this, is fairly frequent outside the lands of Ramsey, but it is nowhere else called \textit{fulstingpound}. That it is the same payment elsewhere, however, seems unquestionable. There are good instances in Bedfordshire,\(^8\) for example, of the 6d. before and 12d. after judgement, and a great many instances in Oxfordshire, where the payment was especially common. In the hundred of Chadlington, for example,\(^9\) which was held at farm by the Earl of Gloucester for £4 hidage, 30s. 2d. tourn payment, and 10s. for a certain view, and in which the sheriff held two tourns and took one half the profits, and the earl the other half, the latter holding the view of frankpledge in all the manors also except two, into which he had ingress once a year with the sheriff, and three where he had no ingress—in this hundred, which is labelled \textit{forinsecum}, a custom suggesting a payment like \textit{fulstingpound} occurs unmistakably.\(^10\) In Saltford, and in Cereddon, all in the hidage when amerced gave 6d. before judgement, 12d. after, \textit{pro misericordiis} at the hundred;\(^11\) in Podelicot the tenants paid 14s. 'de hidagio ut sint quieti de misericordia in hundredo ante judicium 6d. post judicium 12d.\(^12\),'\(^12\) and in Teinton,\(^13\) Chadlington Wahull,\(^14\) and foreign

\(^1\) Ram. Cart. i. 486: 'Tota villata praeter liberos dat in festo Omnium Sanctorum triginta solidos ad fulstingpounde.'

Enneston the same custom prevailed, although the amount paid \emph{de hidagio} varied.\footnote{Rot. Hund. ii. 740: 'Dabunt xxiiis. de hidagio... et xxiiis... ita quod si aliquid qui fuerit in hidagio fuerit amerciatus sive amerciandus dabit vid. ante judicium et post judicium xiiid. videlicet in hundredo de Chadelenton\footnote{Ibid. ii. 31: 'Dicunt quod quelibet virgata terre de eodem manerio (Bensington) dat duos solidos annuatim de hidagio et sic deberent tenentes earundem esse quieti ante judicium pro sex denariis et post judicium pro duodecim denariis et modo amerciati sunt ad voluntatem ballivi et nichilominus dant dictum hidagium.'} aut in visu francorum plegiorum.'} It will be noticed that the payment in this hundred is called hidage, and is assessed on those in the hidage. The same terminology appears elsewhere in Oxfordshire. In Ewelme hundred in Bensington each virgate gave 2s. hidage, and therefore the tenants of these virgates should have been quit for 6d. before judgement and 12d. after judgement, yet now 'they are amerced at the will of the bailiff and nevertheless give the said hidage'.\footnote{Ibid. ii. 32.} In Leuknor hundred an additional identification occurs in the manor of Padehale; all give hidage 'pro pulchre placitari videlicet '6d.' before, 12d. after judgement, and the same is true throughout the hundred.\footnote{Ibid. i. 4: 'Datur pro hidagio vs. domino Regi pro secta et warde vs. pro visu iijs. pro beuplet' ijs,' Cf. p. 6.} In Banbury hundred it is said that the bailiffs of the Bishop of Lincoln, the lord of the hundred, 'take a certain portion of the pennies from every villata of the hundred at the view of frankpledge for \emph{pulchre placitando}, and nevertheless they cause the \emph{villate} to be amerced at their will.'\footnote{Ibid. ii. 783.} The payment called on Ramsey manors \emph{fulsting-pound} is then identified in Oxfordshire with hidage and \emph{beuplet}, or \emph{beplayder}. Since hidage and \emph{beuplet} are clearly distinguished in Bedfordshire,\footnote{Ibid. ii. 51: 'Dicunt quod quelibet virgata terre de eodem manerio (Bensington) dat duos solidos annuatim de hidagio et sic deberent tenentes earundem esse quieti ante judicium pro sex denariis et post judicium pro duodecim denariis et modo amerciati sunt ad voluntatem ballivi et nichilominus dant dictum hidagium.'} where the yearly hidage of two shillings on the hide occurs commonly, it seems probable that hidage may be a local name in Oxfordshire, given because all in the hidage, all holding land geldable to the king unless the geld has been transferred to a private lord, were accustomed to make the amercement payment. It is curious, however, that the rate of hidage, which is commonly mentioned in the county, and in many cases without explanatory details to connect it with the payment for low
amercements, should be usually 6d. a virgate, that is to say, 2s. on the hide.  

1 A payment for a special purpose by all in the hidage of the manor may have become confused with the ordinary hidage, or occasional land-tax turned into a yearly customary payment, of Bedfordshire and Buckinghamshire. The converse, that the hidage of Bedfordshire and Buckinghamshire, and elsewhere, is the fulstingpound payment, is not probable, especially since tenants of Ramsey pay both hidage and fulstingpound. The other identification, with the payment for having one's cause pleaded well, is even less easy to explain. _Bceplet, belplayder, pro pulchre placitando_, is very common. It seems to have been in reality a personal payment to a sheriff or bailiff of a lord for performing his office, not unlike sheriff's aid, if the ordinary interpretation of that payment be the true one, or the payment to the coroner. It is found, not necessarily identified with fulstingpound, in Berkshire,  

2 Buckinghamshire,  

3 and Cambridgeshire,  

4 where it is stated that the amercement for this purpose is taken on the day of the view, and is against the statute of the king; in Derbyshire,  

5 as a new imposition raised by the seneschal of the king; in Essex,  

6 where the money was given to the bailiff of the hundred, and where, at a vill in Wexeden hundred,  

7 the sheriff took at each tourn 12d. 'pro pulchre plac', and yet took amercements too; in Huntingdonshire,  

8 where it was taken unjustly by bailiffs of a lord, and in Kent,  

9 Lincolnshire,  

10 Nottinghamshire,  

11 Northamptonshire,  

12 Sussex,  

13 and Wiltshire.  

14 Most clearly of all it occurs in Bedfordshire and
Buckinghamshire, where the very oppressive sheriff, Alexander Hameldene, whose other sins of extortions were very numerous, made a practice of taking it, whereas before him it was not taken. In almost all these cases the beuplet payment is regarded as a distinct injustice, usually of recent origin, its unrighteousness lying, it would seem, in the fact that amerce-ments are taken also, as if it were held that in some way the payment of beuplet, like the payment of fulstingpound, should free men from some or all amerce-ments. Possibly, we may suppose that unrighteous bailiffs, sheriffs, or private lords are forcing an additional payment from their bailiwicks, perhaps in some cases where by previous arrangement it was already the custom for men to pay a small regular sum for their offences, 6d. before judgement, 12d. afterwards, either as the result of purchase on their part or of convenience on the part of their lords.

A very important question suggests itself regarding the fulstingpound payment in any case, and perhaps regarding beuplet also, if a connexion between the two can be established. What is the connexion between the fulstingpound or similar payment for amerce-ments, and the twelve-penny amercement shown by Miss Bateson to be, with the 12d. burgage rent, the most distinctive privilege offered by the 'laws of Breteuil'? The twelve-penny amercement, valuable because fixing within reasonable, though by no means merely nominal, limits the fines which were likely enough to be made unjustly oppressive by the lords, Miss Bateson found in certain boroughs whose connexion with Breteuil she has traced; especially in Hereford and Rhuddlan, and in certain others where the connexion is not stated. These boroughs are generally in the west of England, or in Wales and Ireland, some of the derived cases extending as far as Cheshire, Staffordshire, and Devon. Outside the boroughs, into the country districts, she does not follow the payment. The phrasing of the amercement clause, as cited by Miss Bateson, is usually a little different from that

1 Rot. Hund. i. 38: 'Item dicunt quod Alex' de Hameldene vic' Boc primo levavit injuste unam injuriam que vocatur beupleder.' Cf. 4, 5, 6, 37, 45.
of the *fulstingpound* clauses; it limits the fine to 12d. without mentioning the payment before and after judgement, except in one instance, that of Macclesfield, where 12d. is to be given before judgement, and after judgement a reasonable *misericordia* according to the character of the offence, unless the forfeiture pertain *ad gladum nostrum*. This passage reads very like the passages relating to the Ramsey *fulstingpound*, and the Oxfordshire hidage, and in any case the principle at the base of the rents seems to be the same. The direct connexion with Breteuil in the wide country districts in which so similar a payment seems to have been customary, would be difficult to establish, and it would look, perhaps, as if the fixed, rather low, rate of amercement for offences were far from being distinctive in later times exclusively of towns modelled after Breteuil.

One other point possibly explanatory of this group of payments should be mentioned. It is common to find in the Placita de Quo Waranto, in certain counties, especially in Bedfordshire, Buckinghamshire, Derbyshire, Herefordshire, Huntingdonshire, Lancashire, Nottinghamshire, Northumberland and Northamptonshire,¹ that the lords of franchises lose their views or are obliged to compound for them, because they have taken fines for breaches of the assize of bread, or ale, or both, which are presented at the view, instead of punishing offenders in the regular way by corporal punishment, defined in the Statutes of the Realm. The brewers, for the third offence, should have gone to the tumbrels, the bakers to the pillory.² Either the lords have in such cases no *judicia*ia, a state of affairs probable in vills in which the number of their tithings or individual tenants was very small, or, more often, having *judicia*ia they do not use them, but contrary to the law of the land prefer a money remuneration for offences.³ They even allow them to fall to the

3 Ibid, p. 505: 'non habet tumbrellum quod est proprium judiciale ab inicio institutum ... et non per amerciamentum quod est singulare proficuum et contra justiciam et communem legem.'
There is, however, always a financial limit recorded in the *Placita* beyond which the lords do not exact fines for breaches of the assize, and it happens that in cases where the two payments can be compared, this financial limit agrees with the amount paid by the vill for *fulstingpound* or its equivalent. Thus especially in Cranfield and Shitlingdon, the villata pays 20s. *fulstingpound*, and also the Abbot of Ramsey punishes all misdemeanours in the assize up to 20s. worth, by fine instead of pillory. It may be that the Abbot of Ramsey took from his vill a sum of money equal in amount to the sum of the fines normally received, and in consideration of that sum of money, which he was thus assured of obtaining whether his tenants committed any offence or not, let them off with very moderate fines for offences actually committed. The emphasis on fines for breaches of the assize in the Quo Warranto proceedings and the omission of other possible offences mentioned in the Ramsey Cartulary, such as negligence in agricultural matters, would be explained by the fact that the latter offences were purely manorial, and the royal officers were not interested in the lord's arrangements regarding them, whereas the maintenance of the assize of bread and ale was in theory a regality, separate from, although usually exercised at, the view of frankpledge.

Witefe, Whytepund, Wytepenny, Witepont, Wytepeni, Witepanes. A rent which may have been of the same nature as the *fulstingpound* is found on Ely manors in the counties of Cambridgeshire, Huntingdonshire, Essex, and Suffolk. This is the customary rent paid to the bishop, which appears in some compound form of *wite*, like *witefe, witepund, or witepenny.*

1 P. Q. W., p. 546.
2 Ibid., p. 65 (Shitlingdon): 'Et quod idem Abbas et predecessores sui scisit fuerunt de praedictis visibus libera warennam (*sic*) infangthef weyf et stray et tam libertatibus illis quam quietancis predictis usi sunt in omnibus prout debuerunt hoc tantum excepto quod idem Abbas nunc levavit fines et amerciamenta de transgressionibus contra assisam panis et cervisie usque ad summam viginti solidorum in casibus quibus per judicium pillorii et tumbrelli puniri meruerunt.' Also pp. 499, 501, 508, 515, 517, *pass.*
3 Ibid., p. 270, and pp. 196, 210, 219, 725.
The rate of payment varied very much from manor to manor, twelve acres, for example, paying in one vill 4½d., in another 12d., one virgate paying in different localities 6d. or 4d., or 8d. or 8½d.¹ Sometimes there is evidence of a system of grouping of tenants, in order to make up definite portions of the rent; for example, at Ely twelve-acre holdings paid 4d. and one-third of a halfpenny, so that three tenants of twelve acres each paid together 14d. approximately,² and in Somersham, Huntingdonshire, a cottar gave 2½d. and ½d. so that three cottars together gave 8½d.³ The minute fractions noted in other manors probably indicate a similar grouping.⁴ The rate of assessment was evidently a matter of individual adjustment between each vill and the lord, regard being had, probably, to some final sum desired, like the fulthingpound, a sum which varied in amount in different places, however, and was often more than 20s.⁵ Ely's freedom from amercement is recorded in the Quo Warranto Rolls,⁶ and in the earlier custumal the sheriff of Essex turns over to the bishop 115s. 8d. 'de misericordiis hominum villarum et decennariorum',⁷ and a list of the bishop's fines follows. 

Pundscot, Custumand, Marcelsvel, Tunnis Census. On Ely manors in Norfolk the rent pundscot occurs, paid by all the

villata except the free, the husebondi contributing equally.\(^1\) In Suffolk a poundsilver is recorded in the extent of Hadleigh.\(^2\) On St. Edmund's manors the rents Census, Tunnus Census, Custumpand, Marceselver, occur.\(^3\) These rents may be the witepund in other forms; they may, on the other hand, refer to the customary tallage or aid. The names seem to indicate at least that like the fulstingpound they refer to rents assessed at a fixed round sum, a pound or a marc, on the vill to which the tenants contributed their appropriate shares.\(^4\)

Common amercements and fines. Another kind of dues which may properly be included among the profits of jurisdiction were fines or amercements laid upon the county, hundred, or wapentake as a whole, which were levied usually on the occasion of some special offence or failure of justice, but in some cases assessed at a definite annual sum, placed ad certum.

Amercements or misericordiae of this kind were due from county and hundred; from the county when the court made a false judgement, or when the county was amerced for some reason in the eyre of the justices, from the hundred when the murdrum had to be exacted, and when it became responsible for other offences, for the failure to produce robbers, for example.\(^5\) Occasionally a common amercement connected with the eyre of the forest is mentioned.\(^6\)

Freedom of the franchise from the misericordiae and amercements of the county and hundred, especially from the murdrum, was usually coupled with freedom from suit of court,\(^7\) but occasionally lands free from suit were still geldable for the common amercement. The murdrum was often levied

CHAPTER VIII

CHURCH RENTS

Church rents, being of general occurrence and not peculiar to manorial society, do not fall within the field of this study except in so far as they were influenced by the manor and assimilated to customary obligations. The influence of the manor upon them was due in large measure to the fact that the lord of the manor was often the monastery to which the parish church might belong, and which thus gained a power of interference in purely parochial and ecclesiastical arrangements, and turned part of the revenue from the church to private uses. Church rents may be divided into the following classes:—first, rents paid primarily to the parish church or to the monastery which has stepped into its place, including especially tithes, ploughalms, soulscot, and lightscot; secondly, churchscot, which in later times had become altogether manorialized; thirdly, rents paid to the provincial church or to Rome direct, especially synodaticum and Peter's Pence.

Tithes. The important controversies regarding the early history of tithes need not be considered in a brief discussion of the place of tithes in the manor. Briefly stated, the safest conclusion seems to be that in origin the endowment of parish churches resulted from arbitrary dedication to them by laymen of a certain proportion of their revenues.\(^1\) The existence of tithes, of the consecration to the church of the tenth of one's possessions, dates from the earliest times, but the payment was voluntary until 787, when legatine councils made it imperative but did not prescribe a particular destination. Edgar's law\(^2\) first made the payment of tithes to the 'Old Minster', the head church of the district, incumbent, except in cases where a thegn had a church with a burying-ground

---

2. Edg. ii.
attached to it on his private estates and should wish to dedicate to it a third of his tithes. If his church had no burying-ground, the thane paid the priest, and all tithes went to the Old Minster. These provisions were repeated in later laws.

Though paid normally to the parish church, tithes were yet often appropriated in part or wholly by a monastery or religious house, and for long this appropriation was acquiesced in with little protest. In the thirteenth century, however, the assignment of tithes to churches was clearly recognized, and in theory monasteries or religious houses claiming them must produce documentary evidence of their right. The monks were constantly struggling to gain papal exemption from the burden of tithes for their demesne land; the parochial clergy, depending upon the tithes for support, were as constantly struggling against it; and the Pope vacillated between the two, desiring the friendship of both. In 1215 the Lateran Council declared that monks and religious houses, except Hospitallers, Templars, and Cistercians, must pay tithe to the village church, but even after this decree the monks frequently gained their point, and had their demesne declared exempt, either as the result of direct grant or of customary use. Professor Savine has shown how important a part of the spiritual revenues of monasteries at the time of the Dissolution was thus derived from the tithes of the monastic demesne. In cases where the parish church was in the hands of the monastery the appropriation of tithes to the monastery was common and easy.

In the Anglo-Saxon Laws tithes appear as the tenth part of the young cattle, paid at Pentecost, and the tenth part of the fruits of the earth paid at All Souls or the autumn equinox, the tithe of young cattle to be paid at Whitsontide and of fruits of the earth at All Hallows. By the thirteenth century these had been stretched to include, as titheable products, corn crops,
hay, fruit, honey, butter, cheese, wool, chickens, doves, lambs, calves, fish from the water, venison from the forest, gains of the miller and merchant, the professional man's earnings.¹

Frequent disputes occurred between church and lay courts in the thirteenth and fourteenth centuries regarding tithes, especially regarding the tithes of wood, *sylva caedua.*²

The descriptions of tithes in the customals vary very much in fulness. The lord's bailiffs were little concerned with the payments made to parish churches; but when the tithes had been appropriated by the monastery or a division was made between the vicar and the monastery some statement of the character of this obligation is given, and of the division of the burden between tenants' land and lands in demesne. Worcester and Ramsey furnish excellent examples of the incidence of tithes on church manors. At Worcester the villeins paid the greater and the lesser tithes, which are described in detail;³ they threshed and carried the tithes of grain.⁴ In some manors the parish church received all the tithes of the demesne except the *decimae nutrimentorum et novalitum*, which were paid yearly to the Prior and convent *de pensione.*⁵ Cases of commuted tithes occur.⁶ The Ramsey Cartulary also, in the description of most manors, states the division and destinations of the tithes.⁷

*Plough alms.* *Ploualmes,* the ancient *sulhacelmanessan* or *elemosina carucarum,* was a common obligation due to the church in Saxon times. Fifteen days after Easter a penny was paid by every plough which had been yoked between Easter and Pentecost. Ethelred's statement of the law is clear:—"And that there be given from every plough a penny or penny's worth, and every one that has a family shall see to

it that each *hirmannus* of his shall give it, or, if he have it not, his lord shall give it for him.'

In later times *ploughalms* was a rare payment. It occurs on the Ramsey manor of Saint Ives as a penny paid the vicar from every plough yoked between Easter and Pentecost, and from every plough yoked in the hamlets of Waldhirst and Woodhurst at the same time as a loaf of bread, half of which went to the vicar and half to the poor. At Wistowe a similar provision appears, except that the payment of bread called *soloulmes* was made at the rate of six loaves from a virgate, two at All Souls, two at Innocents, and two on the morrow of Pentecost. Elsewhere payments assessed on the plough were for the maintenance of church lights, and took on a different form. At Peterborough a heavy food rent like the farm was paid *ad caritatem S. Petri*. In Undele, for example, one cow worth 30d. and three hundred loaves were given for this purpose, and at Wermitone the *pleni et semi villani* paid ten rams, four hundred loaves, forty dishes, one hundred and thirty-four hens and two hundred and sixty eggs. The cloth paid in connexion with this rent suggests the *scrud* rent, the rent *ad vestimentum*, in ancient times due from *scrudland*. At Abingdon a heavy poultry rent was due at the *misericordiae* made at Martinmas and Christmas. The large donations of eleemosynary bread mentioned in the charters will be recalled, and also the *almesfeoh* of the Laws and *Rectitudines*. *Sulsilver*, a rent in Saint Edmund's manor

4 Chron. Petrob., p. 158.
6 Abing. Acc. ii. 317: 'Item de Bertune reddent ad misericordiam quae fit circa festum S. Martini et viii gallinas et ad aliam misericordiam quae fit post Natale Domini et viii.'
of Werketon, which sometimes has the form *culsiliver* paid at Pentecost and was uncertain in amount, may possibly be a form of *ploughsilvers*, but seems more probably the commutation of a rent of ploughshares to the lord.\(^1\) *Ploughsilver* is mentioned at Durham, but without explanation.\(^2\)

*Light scot*, another *rectitudo* of the church in Anglo-Saxon times, was paid usually at Candlemas,\(^3\) but according to Cnut three times in the year, first at Easter, again at All Saints, and again at Candlemas, at the rate of a halfpenny's worth of wax from every hide.\(^4\) In later times this rent was common, occurring usually in the form of *ad luminare Beatae Mariae* or *ad candelam*. It was due at Candlemas and was used for lighting the church. It was paid in the Ramsey manors of Abbot's Ripton and Broughton at the rate of a penny from a married cottar, and a halfpenny from an unmarried cottar.\(^5\) In Wistowe every house with a hearth paid a halfpenny at Easter to light the church.\(^6\) At Brancester the *persona* received a penny from every plough of the *curia* for Easter wax.\(^7\) At Glintone, a manor belonging to Peterborough, a penny was paid by every plough for Easter wax,\(^8\) and on St. Paul's manors and elsewhere similar rents were fairly common.\(^9\) In the north in the manors of Durham the rent appears as *ad luminare*,\(^10\) and also as *candelwekesilver*.\(^11\) *Waurshot* or *waresilver* seems to have been a similar rent.\(^12\)

*Soulscot* was in origin the Anglo-Saxon mortuary due, paid at the open grave, if a man were buried in his own parish, and if he were buried elsewhere still paid to the minster to which he had properly belonged.\(^13\) Of mortuary dues the

customals usually tell very little. *Soulesilver*, if this be the same as the *soulscot* payment, amounted to a large sum in the receipts of Durham,¹ and occurs again at Abingdon.² The vicar’s right to a second best beast after the lord has chosen the best for heriot was fairly common.³

Occasionally other rents to the church or monastery are mentioned, which are rather general in character. Thus the *alteragium* or *altelagium* were fees of one kind or another made at the altar for services and the maintenance of vestments.⁴ The *consuetudo prebende* was paid commonly at Martinmas by villeins at Tischerton, a Peterborough manor, at the rate of 2d. from a full villein, a penny from a half villein.⁵ At St. Paul’s a rent called *dizena* was collected, ‘possibly the denus denarius . . . the seven pence per week or penny per day, in some way a tenth penny or tithe which was paid to the almoner of the cathedral, and denas may be a form of *dizenas*, quasi *diesenae* . . . all that we know certainly of the *dizena* is that they were money payments made in each of the fifty-two weeks of the year by each manor in turn.’⁶

*Church scot* was a rent of another kind, paid to the lord of the manor. The provisions regarding it in Domesday Book have been most fully discussed by Professor Vinogradoff, who finds in the incidence of the rent on the hides of Worcestershire and Berkshire an evidence of premanorial conditions, where it was paid by the normal householder with a hide, and was a rent for church purposes, parallel to the king’s *gafol*.⁷ On the questions regarding its earlier history, especially the attempt of Anglo-Saxon kings and the church to turn a special church rent into a rent of general incidence,⁸ later conditions throw very little light, except in the one particular

¹ Feod. Dun., p. 211.

that the *churchscot* of the later manorial documents seems to have been limited to the counties that were generally within the limits of the West Saxon kingdom. There are no clear cases of it in East Anglia, or in the north or northern Midlands. It occurred commonly, on the other hand, in the twelfth and thirteenth centuries, on the lands of St. Augustine, Worcester, Gloucester, Glastonbury, Abingdon, Winchester, Battle, and elsewhere in the counties of Oxfordshire, Gloucestershire, Berkshire, Somersetshire, Hampshire, and Wiltshire, and perhaps in Surrey. In many manors belonging to various lords in these counties it was a heavy burden on the customary tenants, paid in the form of grain, poultry, or money. Very occasionally there is a regulation regarding *churchscot* that may point back to the *cyresceativeorc*, once mentioned in Anglo-Saxon times, and perhaps forming a fourth variety of early labour service, in addition to *gavolerth*, *grascrth*, and *benerth*. As would be expected from its prominence in Domesday Book, *churchscot* survived at Worcester and formed one of the articles of inquiry for the Register of the Priory in the middle of the thirteenth century. The rent was paid in hens and in grain, and was not one of the 'new customs' by which some tenants had been enfeoffed, but was always part of the old enfeoffment. Thus, at Stoke one-sixth of a *cron* of corn paid according to the older customs is not mentioned among the new customs. In the vacancy rolls of Worcester Martinmas hens are frequently mentioned. The *churchscot* rent in Buckinghamshire, Domesday states, was not paid after the Conquest. On Gloucester manors *churchace* was paid commonly in the form of grain or poultry, and in Glastonbury *churchscot* formed a usual part of the customary obligation, being rendered, however, usually only when services were rendered in labour, and not when they were put *ad censum* in any year. It was paid often at the rate of four hens or

a bushel of grain from a virgate, a distinction being made sometimes in the amount owed by the married or unmarried tenant, and it was paid by all classes of customary tenants, by cottars and underseiles, as well as virgaters.\(^1\) Once it is called 'churchscot of the priest'.\(^2\) At Abingdon it appears as grain or poultry.\(^3\) The Winchester churchscot, a very heavy rent, is described clearly in the Pipe Rolls of that church. It was paid in grain, in hens, which are distinguished from the hens de consuetudine, or in money, and is regularly accounted for by the bailiff.\(^4\) At Sutton account is rendered of 23d. cheriset in addition to 20 quarters and 2 bushels of corn, and 100 hens. These are sent to the deacon;\(^5\) elsewhere the food rent is received by the constable and his family,\(^6\) or is given to the huntsmen.\(^7\) 'The men who give cheriset' are specially distinguished as a class by themselves among the tenants.\(^8\) Crondal records give further evidence of this heavy payment in Hampshire.\(^9\) Churchscot is common also on the manors of Battle, where in Brightwaltham, Berkshire, it appears in the account rolls as arentatus in certo, and was paid in grain, poultry, or money.\(^10\) Elsewhere, possibly, Battle records connect it with labour; the villeins gather stipula on the demesne, and on account of this give churchscot,\(^11\) or plough, or give churchscot as the lord chooses.\(^12\) The Bleadon cus-
tumal shows that sometimes it was called hensyeve when paid in hens, and at Christchurch, Hampshire, it was called Martinrent.\(^13\) The Hundred Rolls record it commonly in the counties enumerated, especially in Oxfordshire, where, as at Battle, it is once stated that it was paid in return for permis-

sion to gather stubble on the demesne after Martinmas.\footnote{Rot. Hund. ii. 712, 757, 758, 763, 775, 776, 779, 780, 782, 785, 786, 818, 874.} It is usual in Oxfordshire to find it paid to the lord of a lay manor as a villein rent, and similar cases occur occasionally elsewhere. It is sometimes found in account rolls regularly included among \textit{minute consuetudines}, or under the \textit{exitus manerii}.\footnote{Min. Acc. 850/10; Kennet, Par. Antiq., p. 262; D. S. P., p. cxxiv.}

\textit{Churchscot} probably appears sometimes in the form of a rent of seed given to the church called \textit{church seed}. On account of the many possible variations in the spelling of \textit{churchscot} the two forms are sometimes difficult to distinguish from one another, and probably in any case both refer to the same payment, \textit{churchseed}, that is to say, forming a part of the \textit{churchscot}.\footnote{Rot. Hund. ii. 712, 757, 776, 779, 782.} Thus in Cnut's letter from Rome provision is made as follows: 'Et in festivitate S. Martini primitiae seminum ad ecclesiam sub cujus parrochia quiesce deget quae Anglice cyricsceat nominatur.'\footnote{Thorpe's Gloss. to Vol. I., with references.} In the Red Book of the Exchequer, in the \textit{Expositiones}, the following definitions occur:—\textit{Chirchesed Chircheomer vel Chircheambre}. 'Une certaine mesure de ble batu qe chescun homme donoit au temps des Bretons et des Englois al eglise le jor Seint Martyn.'\footnote{Red. Bk. Excheq. iii. 1039: the passage continues 'Mais puis la venue des Normans, si le pristent a lor oeps plusors seignurs et le donerent solone la veu ley Moisi nomine primitiarium sicone vous trouverez en les lettres le roi Cnut quil envoia a Rome, et est dit Cherchesed; quasi semen ecclesiae.'} The form appears in later times very rarely. In the Domesday of St. Paul's, however, it is written in the margin of the account of Bernes in Surrey as a gloss on \textit{mantecorn}, and an interesting note is added by the editor in which the rent is connected with a very ancient Celtic custom taken over by the church.\footnote{D. S. P., p. 105. Cf. pp. 154* and cxxiv.}

Another class of payments went beyond the parish church and the monastery or lay lord of the franchise, to the church at large, and had little connexion, as a rule, with customary rents. The most important representatives of this class were the \textit{Synodaticum} and \textit{Peter's Pence}. Occasional re-
Payments to Synods. 'By canon law... a bishop holding a synod was entitled to receive 2s. from every person cited to it, the payment being termed synodaticum, the object being to tempt the bishop to hold synods... Probably synods of bishops were held twice a year even after William I.' The payment is thus defined by the editor of the Domesday of St. Paul's in explanation of the common occurrence of the synodaticum on St. Paul's manors. On each manor a yearly rent is mentioned, paid at Michaelmas, for this purpose, amounting to something over a shilling, collected like the Peter's Pence, and once retained by the firmarius for his own purposes. As in the case of other rents, the lord, paying an annual sum himself, may have recouped himself with a larger sum exacted from his customary tenants and paid under the name of the original rent or some other. The Hexham documents include a quit claim of 4s. of synodal rent from an archdeacon of the West Riding. The payment occurs in the Gloucester Cartulary; Durham, in a probably spurious charter, is exempted from it. 'Aids' of archdeacons and bishops are sometimes mentioned also, and at Ramsey there were various payments made to the archdeacons appointed to collect the papal dues. A curious collection of a different character was the Confraria, Fraria, Collectae, voluntary contributions collected by the Knights Hospitallers from 'diverse churches' of the neighbourhood, originally in virtue of some papal bull.

Peter's Pence. The controversy regarding the origin and early history of the Romescot or Peter's Penny has little bearing on the incidence of the payment on the manorial population. The disappointing meagreness of the information regarding it in the later documents probably results from the

extra-manorial character of the due. The researches of Favre and Jensen have proved that the actual amount of money sent to Rome annually from this source was approximately 300 marcs, whether that fixed sum may have been the survival of an old customary assessment, or the result of a twelfth-century convention between the pope and bishops, and that papal attempts to secure more than this amount were unsuccessful.¹ From the information given in the customals it seems probable that a much larger sum than this was collected each year, or at least in years in which the payment was made to Rome. Customals often state that every one with goods to the value of 30d., the later Saxon or early Norman alteration of the original assessment on each householder, contributed a penny to St. Peter.² Sometimes if a villein were married he paid a penny, if unmarried, only a halfpenny. The custom at Ramsey is clearly stated: Whoever, being married, has on Christmas Eve averia, plough beasts, to the value of 30d. at least, shall give at Ad Vincula a penny, which penny is called the denarius Sancti Petri, and a man without a wife and a widow shall give a halfpenny. For chattels, moreover, the said penny shall not be given.³ The restriction of liability to those with averia is rare. At Battle the more common assessment on chattels, moveables, to the value of 30d., occurs on one manor;⁴ on another it is stated that omnes tenentes pay the due.⁵ The provisions regarding marriage are found also at Glastonbury and elsewhere.⁶ Sometimes the form of statement in the records suggests that the tax was levied on the villata as a fixed sum, the distribution of which would be a matter of local custom and arrangement, and the total amount not necessarily, therefore, an indication of the capacity of the vill. Thus in the

² For example, Edw. Conf. Leg. 10; Leg. Will. Pr. i. 17.
³ Ram. Cart. i. 331. Cf. i. 282, 321, pass.
Register of Worcester long lists are given of the amounts from various manors, amounts ranging from 5d. to 3s. 5d.,¹ and in the Gloucester Cartulary the total amount due from Littleton is given as 20d. a year as if the sum were not subject to change.² Custumals give occasionally the total sum due from a vill.³ Whatever may have been the variations in local custom, it would seem probable that the amount collected within the manors would have brought a sum far in excess of the 300 marcs paid to the pope, and on the appropriation of the surplus we get sometimes a little light. Thus Innocent in a letter inquires concerning the unjust appropriation of the due by prelates, and commands an inquiry to be made in the matter.⁴ More specific information may be had from the Domesday of St. Paul's regarding the method of collection in the manor and the possibilities of misappropriation. In Cadendon and Kenesworth it was collected by the rural dean.⁵ In several manors the collection was made by the sacerdos.⁶ At Tidwolditon it was collected and paid by the clerk,⁷ and in still other cases it was collected by the firmarius and paid by him to the dean,⁸ but in Sutton and Norton the firmarius collected it and retained it.⁹ The money collected was paid usually by the dean to the archdeacon. Still clearer evidence of the retaining of Peter's Penny is furnished by the account rolls of Winchester. The bishop was responsible for the payment of a given amount to the pope's representative, but collected evidently the total sum himself of which his manors were capable, and, handing over only the correct proportion of the total English assessment which was due from his diocese, regularly included the residuum in the exitus of his manors.¹⁰ Thus in the account of Wittene the bailiff 'reddit compotum de 3s. 6d. de residuis denariorum Sancti Petri', and at Wicumbe the words 'hoc anno' are added. In

the Black Book of St. Augustine's the Romescot is included regularly in the list of customary dues without a statement of its destination.\textsuperscript{1} The Bishop of Worcester granted Peter's Penny by a charter to the monks of Worcester.\textsuperscript{2} Jensen has shown the various methods used in the collection of rent. Before Becket's time the Archbishop of Canterbury was responsible for the collection; from the time of Becket to 1284, a bishop was commissioned by the pope, while at the end of the thirteenth century a special collector took charge of Peter's Penny and other payments, and had under him, and responsible to him, a number of sub-collectors for different districts. England was divided for this purpose into districts, in accordance with the two archbishoprics, the bishoprics, and archidiaconates, and the sum due from each district was fixed.\textsuperscript{3}

The exact method by which manorial collections reached the collectors, and the power of the collectors to interfere in manorial arrangements, does not appear. In the earlier period the king might be called upon to require his justices to enforce the payment,\textsuperscript{4} and the sheriffs may have been given some authority in the matter.\textsuperscript{5}

Other names for Peter's Penny were Romescot, hearthpenny, smokepenny, swarfsmoney, and fire hearth. The identification of Romescot with Peter's Penny is probably unvarying, but the exact meaning of hearthpenny is not always so clear. In the laws the two names, hearthpenny and Peter's Penny, refer to the same payment; thus Edgar states that every hearthpenny shall be paid at St. Peter's and the usual Peter's Penny penalty is attached to failure to pay it.\textsuperscript{6} In the Rectitadines, on the other hand, and in the Battle custumals, a difficulty arises from the appearance of hearthpenny side by side with Romescot.\textsuperscript{7} Possibly the payment was made twice a year at

\textsuperscript{7} Edgar, ii. 4.
\textsuperscript{1} Schmid, Anh. iii. 3, and note. Batt. Abb. Cust., pp. 4, 5, 7, 8, 10: 'Pro Romescot et hertyeld' 2d., 1d., or 4d.; p. 43, hertheld at the feast
Battle and the payment at the feast of St. Thomas was called *hearthyield*, while that at *ad Vincula* was called *Romescot*, or else the name *hearthpenny* at Battle is applied to a payment resembling *churchscot* or some other church due. At Glastonbury, on the other hand, the two names, *Peter's Penny* and *hurtpeni*, seem to have been used interchangeably.¹ Probably *hearthpenny* was a more general name applicable to any tax levied primarily on householders, but usually identified with the Peter's Penny.

*Smokepenny* or *Smokesilver* is curiously defined in a late document: 'To the summer for Peterpence or smoke farthings sometyme due to the Antecriste of roome xd.'² *Swarf-money*³ and *fire harth*⁴ appear to be other late names for the same payment.

The study of church rents shows that they, like the royal rents, although in less measure, yielded to the co-ordinating forces of the manor and were assimilated in part to customary rents proper. When the lord of the manor had become the immediate, if not the ultimate, recipient of such extra-manorial dues, the further step, the placing of them *ad certum* for a fixed annual sum, was not difficult to take.
